an inverter. Watch out for 'inverter buzz'; this can fill the screen with
a 'comb' of harmonics of the inverter oscillator. Sine-wave inverters are
the least troublesome. be careful though; the Military Police may treat
you with some suspicion if you sit outside the boundary fence of your local
airbase with a car-full of wierd-looking radio gear....
And if you know someone who works for the FCC, ask to look inside one of their
trucks, and see how the professionals do it. If only i had a spare
$30,000 and could afford a SpectrumScope(tm) :-)

Having just purchased an ICOM-735 transceiver, I'm interested in finding out if anyone has devised the necessary interface between a PC and the rig's serial control port? I know Icom makes one, and though I haven't checked the price yet I'm sure it will be ridiculously out of line. Thanks.

Don't have much time so short response

Anatol Zverev " Handbook of filter synthesis" pub Wiley

is THE source of just about all current filter design work and books. light on explanation, complete on the maths. Your needs are wider than amateurs are now interested in.... too wide for ladder topology, you need lattice structures and custom crystals, with controlled spacing between series and parallel resonances crystals in pairs with the series res of one planted on the same freq as the parallel res of the other. spacing between them being roughly equal to the wanted bandwidth.

The Ohio/Penn Dx Packet Cluster
DX Bulletin No. 030 (OPDX.030)
October 7, 1991
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn Packet Cluster Network, GW3CDP, OH0XX, K3BEQ, K4CEF & Southeastern Packet Cluster Group, NA8A, NW8F, WB8LFO, WD8LLD, KA8MVJ and K8YSE for the following DX information.

1S, SPRATLEY ISLANDS. Romeo and company are QRT from here as of Sept. 30th around 2213z.

3B7, SAINT BRANDON ISLAND. Jackie, 3B8CF, was heard saying on October 4th, he will be staying at 3B7 for 10 more days. It seems he is having transportation problems. This is good news for those who have not worked him. He can be found on the following frequencies and times: 28530/1600z, 28020/1340z, 21345/1730z, 21335/1830z, 18081/0258z, 14035/0230z and 14236/0300z.

FR/G, GLORIOSO ISLANDS. By the time you read this, Jacques, FR5ZU/G, has probably left this island. The rumor going around has him leaving on the 6th or the 9th. All operations were on the 21345 Net at 1800z and the 14256 Net at 0200z. The Southeastern Packet Cluster Group reported that lately, Jacques has done some 10 meters freestyle.

P5, NORTH KOREA. Rumor continues to persist that Romeo, UB5JRR, will be going to North Korea.

S2, BANGLADESH. Eric, WZ6C, who is signing S21NQ has left to attend an Amateur Radio Convention in Indonesia for two weeks. He has gone there to represent amateur radio from S2.

ZA, ALBANIA. What more can you say about this history making event? They are here, there and everywhere, with the continuing word of more operators both students and foreigners, to be active. In a press release by OH0XX, dated 9/30: ZA1A has made more than 40,000 QSOs; Activity has began on 6 meters; Luciano, I5FLN, will begin operating RTTY on October 3rd for four days (first time ever); Four students have been licensed - ZA1TAA, ZA1TAB, ZA1TAC and ZA1TAD. With all of the training and operating of ZA1A, the stations ZA1QA and ZA1HA also continue to be very active. As weeks past, Albania is quickly moving down the "DXers Most Wanted List". UPDATE 10/4: According to Martti Lane, OH2BH, the ZA1A operation will go QRT after this weekend. As of

Oct. 4th, they have made 70,000 contacts. Martti also reported that 12 students graduated from amateur radio school on Friday.

A5/S2 AND VK9NS. Jim Smith, VK9NS, was heard on 10 meters one evening talking about his possible operations from A5 and S2. He stated that the S2 operation is imminent but there is frustration involved with operating from A5 again. Jim will continue to try to obtain the necessary permission/documentation for another A5 mission, but it is uncertain at this time exactly when that will happen.

DX NEWS, FACTS AND RUMORS. FR5AI/J maybe active from Juan de Nova on or around Oct. 15..... Bing, VK2BCH, supposedly on his way from 3D2, Rotuma to T2, Tuvalu..... Jim, VK9NS, will go to S2 in mid-October to operate..... OH1RY plans a trip to KH1 in mid-October--no further details..... OD5ZZ is stateside attending a reunion in Indiana and will be making a trip to Cleveland to visit the NODXA gang-- length of stay is unknown.....

DXCC DESK. It seems turn around time for endorsements is really improving. For the month of September, turn around ranged from 22-30 days, but this could be due more to the influx of Penguin Island cards.

SLIM REPORT. Goose, WD8LLD, was informed by WA4JTK, QSL Manager for A71CD, that if you worked the A71CD in the vicinity of September 17th, save your postage until you hear differently. This station is a SLIM.

YA0RR CARDS. It was reported by the INDEXA group, a Russian station stated the YA0RR QSL cards will be sent out October 9th.

DX NETS. (OPDX received a request to list some of the active DX Nets.)

>
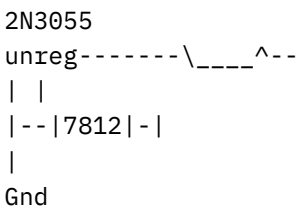
>QUESTION: Has anyone seen a voltage regulator that meets this requirement
>for a lower price? I know I could put several lower rated regulators in
>parallel, but I was hoping to accomplish this with "ideal" parts.

The traditional way to make a high current pass regulator is to use 2 or more 2N3055 transistors in parallel as the pass elements. See an Astron or the like for an example. The schematic on page 6-19 of the 91 Handbook illustrates how to make a high current supply using this technique.

If you don't need overcurrent protection, you can just use a 2N3055 pass transistor with a 7812 driving it's base like so,



The problem with this simple circuit is that overcurrent protection starts at about 100 amps which is way too high. There are several ways to add overcurrent and overvoltage protection, but the simplest way is to use a 723 regulator IC as is used in the Astron and in the Handbook circuit.

>send a letter to?

While the FCC will respond to a telephone call to the nearest monitoring station, this is not the best way to handle intruders. Work instead thru the Amateur Auxillary, that's what they are for. The FCC has some really super people working in the field offices, but they generally have more important fish to fry. They are prepared to work with the folks in the Auxillary who know how to document problems and do the preliminary leg work for the FCC staff. This better utilizes the very limited manpower of the FCC field organization and leaves a better impression of amateur radio with the commission staff.

>Does anyone know of any? Is a 12V supply sufficient, or does
>one need 15V?

To charge an auto battery to 100% charge in a reasonable time, you want to use 14.8 volts. But for trickle charging you want to use 13.8 volts. So if you want to fairly rapidly bring a battery to full charge and then put it on trickle, you need sensing circuitry and voltage switching circuitry. However, if you start with a charged battery and only want to keep it hot, then placing a 13.8 volt regulated supply across the battery will keep it at 100% charge indefinitely without damaging the battery.

>use the discone but don't want to hurt the transmitter. Question:
>Will I have significant problems transmitting 5 watts into 75ohm
>coax? and if so, what's the best 50 ohm cable to buy?

The HT won't be overly bothered by the 75 ohm cable, after all it normally drives a rubber dummy load of unknown impedance. But the antenna system will be more effective if low loss cable is used. I'm assuming that you used RG59 to feed the antenna. If so, switching to Belden 9913 (50 ohm) will make a major difference. Even staying at 75 ohms and going with RG6 would be an improvement. RG58 (50 ohm) and RG59 (75 ohm) cable is very lossy at VHF/UHF for runs of more than a few feet. You are probably losing 3/4 of your signal to cable losses.

If you choose to use 9913, highly recomended, then you will want to add a small whip of RG58 between the HT and the 9913 since 9913 is very stiff. Use a type N or type BNC fitting at the transistion point. Avoid the misnamed UHF fittings at VHF/UHF as they are not constant impedance and are lossy.

>
>Do I just need to short out the ends of each cable and check
>the resistance (RG-6 cable) or is there a better way to
>check the system.

No, all this would tell you is if you have DC continuity through the cables. What you want to do is determine the loss of the cable at the frequency at which it will be used. Shorting one end and using a return loss bridge is one way of testing the cable. Another way is to feed a small amount of RF into the cable at one end using your ham radio and measuring the power out at the other end using a power meter and a dummy load. If the power out is less than 1/4 the power in, then replace the cable. This method won't be absolutely accurate because the cable is 75 ohm impedance and the test equipment will be 50 ohm impedance, but it will show gross problems that would indicate the cable needed replacing.

>The receiver and LNAs must be working because the
>unscrambled signals come in real clear (and my ham radio
>doesn't bother them at all)

This tends to indicate that the cable is not the culprit. Perhaps you did something wrong in the installation. A wiring diagram of the way you hooked up the system would be helpful.

3495. Mode LS on AO-13

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-07 14:14:12 UTC
From: walzer@inqmind.bison.mb.ca
Message-ID: <Dagg01w164w@inqmind.bison.mb.ca>
Source record: 292869

Here's a question for any Oscar-13 users out there...

On the new schedules for AO-13 there is a mode listed called "LS"
("SL"? I forget). I know that mode L is 1200 up and 430 down. I know
that mode S is 430 up and 2300 down. It seems to me that 430 is
in conflict. It can't be both up and down at the same time. My guess
is that mode LS is actually 1200 up, 2300 down. If so mode LS is of
interest to me as it would be the first time one could operate on
a high altitude amateur satellite without needing an outragously
large antenna array. Also, 1200 up and 2300 down was planned to
be the primary mode for Phase 3-DL so any work that I did now would
be applicable to that when it goes up.

Thanks,
Bruce VE4XOR

The 50 feet of 75 ohm coax seems to work fine with 5 watts out of my HT.
The rig gets pretty warm but not hot. The discone coverage in the Dallas
area seems to be about 40 miles maximum, 30 miles dependably. It is mounted
about 25 feet up on my rooftop.

Some people insist on trying to force their brand of morality on others. This is a two edged sword that can cut both ways. The FCC is understandably reluctant to get involved in matters of taste. Taste after all is mostly in your own mouth.

>The antenna leads are shielded coaxial cable.
>Does anyone have any suggestions as to an effective cure.

Paint and plastic are RFI's friends. You'll want to make certain that there is no paint between mating surfaces on your PC's case and that you are using star washers on all case screws. Ventilation and drive bay openings should be screened with copper mesh. Ground the case to your good RF ground system. And most of all, shield your monitor. They are generally the worst offenders when it comes to radiating RFI. The plastic case can be helped with conductive sprays or you can use copper mesh glued to the inside of the cabinet. The tube should be equipped with a proper shield covering the bell and grounded correctly. In stubborn cases you may have to fashion a wire mesh mask over the face of the tube, though this is seldom necessary. Avoid the temptation to bundle your cables neatly. Make sure that radio and computer cables run at right angles to each other and are separated by as much distance as possible. Keep your computer cables separated. Induced noise will hop from one cable to another increasing radiation. If all else fails, consider buying a Tempest rated computer.

>
>Who is right, VHF'ers or UHF'ers?

It depends. UHF is often better at penetrating into steel framed buildings than VHF while VHF is often better at refracting around obstacles like hills. Depending on the environment where you will be using the radios, terrain, type of buildings, etc, one will out perform the other. If your service area is in rough terrain with lots of shadowed valleys, then VHF will serve you better. If your service area is flat and urban, then UHF will likely do better. If it is mixed, as most are, depend on the advice of experienced locals.

```
|>...
|>Richard is right, and so is Roger, but they are answering different
|>questions. A transmission line that is not an appreciable fraction of
|>a wavelength long will act primarily as a simple coaxial feedthru capacitor
|>with a value of about 30pf/ft. Such "capacitors" are often used as
|>gamma match capacitors in HF antennas and short coaxial capacitors are
|>widely used at UHF.
|>...
It's important to distinguish open-circuited cable (as in this example)
from terminated cable. The statement "will cat primarily as a simple ...
capacitor..." is true only in the former case. If it weren't for that,
patch cords wouldn't work!

|>Gary KE4ZV

One point that hasn't been mentioned: coax cable of finite size definitely
DOES have a cutoff frequency -- that is, a frequency at which it no longer
acts like a normal coax cable. That happens when the wavelength is small
enough that the shield begins to look like a waveguide -- when the diameter
of the shield is about a half wavelength. For ham use this usually is
a non-issue. But if you're using very big coax in UHF broadcasting
applications, it could be an issue. (6 inch coax just barely makes it to
the high end of the UHF TV band...)

3504. bicycle antenna

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-07 15:41:02 UTC
From: djb@mailer.cc.fsu.edu
Message-ID: <1991Oct7.154102.7492@mailer.cc.fsu.edu>
Source record: 292859

I spend a lot of time on a bicycle and am thinking about mounting some sort of antenna on it for 2m. I've thought about a 1/4 wave whip on the luggage rack but it's often full of sleeping bag or tent. I checked out marine antennas but they weigh too much. I looked at a bike flag mast at the local Wal-Mart and think there may be some hope there. How would a 2m dipole mounted on the flag mast do? I could use any smalish wire and either glue, tape or heat shrink tube it to the mast. The mast would serve the additional role of making the bike more visible to folks driving in air conditioned boxes.

3505. Re: Do you own an ICOM W-2A?

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-07 15:52:01 UTC
From: davy@frenchhorn.ecn.purdue.edu
Message-ID: <1991Oct7.155201.27280@noose.ecn.purdue.edu>
Source record: 292860

A few weeks ago, I asked for people's experiences and opinions of the ICOM W-2A dual-band HT. Here's a summary of what I received.

Almost everyone (15 people) loved the radio, and would buy it again. One person had two bad ones in a row, and gave up.

Likes:
- "phenomenally well engineered"
- comes with a 1 Amp-hour battery
- power-saver function
- extended RX range - 118-136 MHz AM, 2m (140-170), 70cm (430-512), and 800-900MHz.
- receive sensitivity
- easy to learn/remember keyboard interface
- 60 memories

Dislikes:
- LCD lens is plastic, and scratches easily
- accessory jack is plastic (not rubber) and may break off
- power connector is totally non-standard
- accessories are hard to come by
- push on/off power switch can be accidentally hit
- can only charge the battery with the radio, unless you buy a drop-in charger or special battery cap
- intermod is bad

Recommended Accesories:
- HM-65 or HM-70 speaker mikes
- leather case to prevent scratches on lens
- alligator clip replacement for spring belt clip

Most people agreed that the audio was somewhat weak, and said that while it's fine around the house, it's not loud enough for use out in the open, or in the car.

Thanks to all who responded. I'm going to order mine today, with a speaker mike, leather case, BP-90 (6 AA's), and maybe a drop-in charger.

+
+Eddy,
+
+ Unfortunately I don't think that you're going to be able to get them to
+ buy it.. If you got pulled over with 2 other cars what probably happened
+ is that the Radar picked up the vehicle with the biggest radar cross
+ section and used that for the reading it gave the officer. The police
+ are pretty careful to keep their radar up to date and accurate just so
+ people they pull over don't go around claiming that it was inaccurate.

I can't address it issue of desensing, but I can mention a few.
things about police radar:

- indeed, it will return the signature of the largest object in the beam. Thus, if you were being passed by a larger vehicle, it's very possible that that vehicle was the one indicated. Unless the officer was able to conduct a survey of the traffic as it passed (i.e. visually gain an idea as to whether you alone were speeding, before he pulled the trigger) then he cannot truthfully say that a) you were the one speeding, b) you were the one he shot. He could claim you all were speeding, but then you can state that there is no evidence of this, as a radar gun can only lock on one target.

- the beam of a radar gun spreads out rapidly. I don't recall how rapidly, but it's big enough to get more than one car at the ranges the police generally use them at.

- depending on the gun (you should suppoena the gun, it's instruction manual, and the maintenance/retuning records), the manufacturer may indicate that the gun should be re-calibrated with an external src (such as a tuning fork) before each use. One should not use the internal calibratio check button. You need to read the instruction manual, find out the dos and don'ts, and grill the officer on them. You also need to ask him what, if any, training he had on using the gun.

- I've heard of some people suppoenaing all tickets issued by the officer on that day. If it shows everyone going the same speed, you might make a point that either gun was not working correctly, or the officer was ticketing multiple people for one persons speeding.

There are books on this sort of thing, but I don't know if you have
the time to find and order them. Given the price of tickets today,
if I was you I'd fight it. At the very least you'll gain an understanding
about how kangaroo traffic court works.

Some time ago I saw an ad for PCB film that can be used in a copier.
Of course, now that I need it I can't find the ad.
Any one know of this product? As I recall the company was located
in New York state and the product was something like TEC-2000.
It sounded pretty neat, could make positive artwork from magzine articles
without destroying the articles and would work in laser printers.

Thanks for your help.

>cannot seem to find an antenna switch that would allow me to rotate antennas
>in this fashion.

You will likely have to wire up your own. If you are operating on HF
(below 30MHz or so), it should be fine to just use a rotary switch with
five wafers, each with five positions. Just connect the common of wafer
1 to antenna 1, common of wafer 2 to antenna 2, ... , common of wafer 5
to antenna 5, position 1 of wafer 1 to p.2 w.2 to p.3 w.3 to p.4 w.4 to
p.5 w.5 to receiver 1; p.2 w.1 - p.3 w.2 - p.4 w.3 - p.5 w.4 - p.1. w.5
- receiver 2; ... ; p.5 w.1 - p.1 w.2 - p.2 w.3 - p.3 w.4 - p.4 w.5 -
receiver 5.

If you are dealing with VHF or UHF, you should pay very or ultra ;-)
close attention to lead lengths, and optimally would use a better
arrangement than a standard wafer switch.

This may not be the answer to the question you should have asked, but it
should get you started.

3512. FA1443BA vs FA1443B revisited.

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-07 17:23:08 UTC
From: baxter@kuhub.cc.ukans.edu
Message-ID: <1991Oct7.122308.34201@kuhub.cc.ukans.edu>
Source record: 292868

Thanks to all the folks that responded to my earlier posting about
the differences between the FA1443B antenna and the FA1443BA antenna.

Someone suggested that I call Icom and get them to exchange my 1443BA
dummy load antenna for the 1443B model, as they were doing this for
people that got stuck with the poorly operating model.

Well, I called Icom customer "service", and got absolutely no where
in this matter. I was told that they never had exchanged the 1443BA
for another model, as the BA antenna met all of it's specs (I didn't
ask for what -- a dummy load??) I got absolutely no where in trying
to pry more information out of this unhelpful person, as to whether ICOM
had ever provided replacements for this model?

Now come on ICOM.... can you spell CUSTOMER SATISFACTION?
All I'm getting is the "well you bought it sucker, now you're stuck
with it, BUT we'll sell you a new antenna to make it better" routine.

BYE BYE ICOM, I'll deal with a customer FRIENDLY organization.

At first I thought that the new anti-scanner bill was just going to outlaw stuff that receives cellular. I figured the manufacturers would just figure out a way to hard code the microprocessor not to do celtel. Now I read that it will block ALL freqs from 800-900MHz?!?!? Is this true, or are you figuring that it would be so difficult to eliminate celtel, that it will be easier for the manufacturers to just eliminate 800MHz coverage altogether?

Gee...I hope not. Our local Search and Rescue department provides first-out emergency medical response on holiday weekends for the Pismo State Dunes Vehicular Recreation area. Parks and Beaches department uses 800Mhz...

I'm looking for a discreet, mobile VHF/UHF
antenna. I've looked through an issue of
CQ, but was not even able to find ads for
these antennas.

Price is important, so an education on the
subject may be in order..

In what price range do these antennas run?

What are the quality brands and what are the
"cheap, but not so bad" brands?

How can I get in touch with manufactures?

Thanks,

3517. FA1443BA vs FA1443B antennas

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-07 18:09:00 UTC
From: FLEM%HYDRA@leia.polaroid.COM
Message-ID: <9110071710.AA18365@ucsd.edu>
Source record: 292799

I have an ICOM ICW-2A with it's standard antenna (FA1443B) and I never felt very good about it... I've been using the MFJ 3/8 wl 2 meter antenna (it's a black telescoping unit) but on the new MFJ antenna analyzer (at a MFJ booth @ Deerfield NH Hamfest) the antenna showed NO resonance between 140 and 158 Mhz. The two antennas that approached 1.5/1 SWR were the LONG MFJ (abt 36") and the H.C.Van Valhall (sp.) rubber duckie... I did purchace the HC V.V. 2 band 6" 'duck' but have no real way to test SWR on radiation on 440. I hope the W-2a is as robust on infinite loading as the IC-2AT is.
I've also been considering an external antenna for the car. I finally decided it'll be OK to drill a hole in my Mercedes (after all it's nearing 200,000 miles and I intend to keep it for a while). Diamond and Maldol both have 1 meter (in lenght) dual banders I'd consider, with the only option yet decided being the mounts. I don't have any preferance, yet. The two options are TNC and UHF the other recommendations for NMO. I guess Larsen isn't making the NMO (I havn't been able to find one, yet) any longer so I've been leaning toward the UHF. I feel the best location would be on the right quarter panel, mid-lenght along side the truck edge. The truck lid is out, since it's some kind of aluminum alloy and I've never heard anything good about thru-the-glass mounts... I hope I'm headed in the right direction. Most of this has been my own thinking so I'll be most receiptive to hearing abt other's experiances...

In article <32920035@hpspdla.spd.HP.COM> paulz@hpspdla.spd.HP.COM (Paul Zander) writes:

2. Now to the real question. There is relatively little difference in
the propagation for VHF or UHF signals. Both are generally limited to
line of sight. In a big city, UHF can possibly penetrate into steel
framed buildings slightly better. The real question is the availabity

UHF is my band of choice in the amateur world. The resaon for this is
mostly political and historical and relates to amateur radio. Howver,
there are very different propogation differences between the bands.
True, they are both technically line of site but I find UHF is more
so. They "grey" area for the path is much more limited than VHF.
Running more power on VHF will usually noticeably help you while this
is less true on UHF for similar power levels.

Another advantage of UHF is that you can get more gain for a similar
sized antenna over VHF.

For whatever reason I find that I can mountaintop with a HT much
better with UHF than 2 meters. Well over 100 miles line of sight in
the New England Area. I think that VHF might disperse more.

jv <- "UHF guy"

PS When I started as a ham in '86 UHF was considered alomst
experimental or at least a new frontier. The kind of people that
"hung out" on UHF were more the experimenter and pioneer type which
was more interesting to me than the old buzzard rag chew talk about
the wx types that are prevalent on 2 meters. I don't mean this as a
flame as I realize that amateur radio attracts people for different
reasons. And for better or worse the prevalence of dual band radios
now is beginning to blur the social distinctions.

How about a coaxial dipole? I gave some thought to this sort of flag
mounting a year or so back. You should be able to make the antenna from
a length of RG-58 and the short length of feedline lessens any mismatch
loss. Good luck.

3520. Solar Bulletin - New Solar Image FTP Service Is Now Available

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-07 18:49:19 UTC
From: oler@hg.uleth.CA
Message-ID: <0094FC2C.BBE6C200.2169@hg.uleth.ca>
Source record: 292801

/\

SOLAR TERRESTRIAL BULLETIN

07 October, 1991

Solar Image FTP Service Now Available

/\

NEW SOLAR IMAGE FTP SERVICE IS NOW OPERATIONAL

Full-color, high-resolution (512 x 512 x 256) and occassional very high resolution (near 1024 x 1024 x 256) solar images in GIF format are now available to interested persons or organizations through our new Solar Image FTP Service. The previous Solar Image Email Service which sent images via electronic mail, has been phased out and replaced by this FTP service.

This new service should significantly simplify the procedures for obtaining these images. In addition to being much simpler, you may now pick and choose from a number of images that are stored online and are continually being updated daily.

Images are made available on a daily basis for FTP transfer and may include: Research Grade Hydrogen Alpha Images of the full disk, active solar regions, major flares, minor flares, prominences, surges, sprays, etc; High resolution Full-Disk Solar Magnetograms and/or special close-up magnetogram images; Magnetic Maps of active regions; Helium 10830 Angstrom Full-Disk Images revealing such things as Coronal Holes; Ca K Emission images; Solar Region and Coronal Hole Maps; White-Light Solar Images of active regions in high magnification; High Resolution Data Plots of X-rays, protons, neutrons, polar cap absorption, and/or geomagnetic field components, etc. All images are in the popular GIF format.

Many images are processed daily from data provided by professional solar observatories around the world. The images made available for FTP are usually less than 12 hours old - which is as close to real-time as possible.

For information on the procedures required to access these images, send a request for information to: Oler@Hg.Uleth.CA, or to: COler@Solar.Stanford.Edu.

Source record: 292785

The only reason we hams had any frequencies in the first place is that nobody who really mattered wanted them. As our frequencies, especially those in the UHF band, become more commercially valuable, we can expect to lose them; the 220 band was only the first to go. I hate the idea as much as anyone, but I'm very pessimistic. We can scream and yell, but when it comes right down to it, money talks, and a bunch of hobbyists just don't figure into the political equation.

That's questionable. The spec for the Part 15 FM band (47 CFR 15.239)
is 250 uVolts per Meter at 3 Meters, which comes out to something like
30 nanowatts as I compute it.

Yup, letting ARRL help manage the namespace is so important that it
would be worth giving up a significant portion of the spectrum. But
the ARRL did better than that, they're screwing scanner scum and have
convinced congress that the radio community is giving up something by
doing that.

A few more deals like this and you folks are going to have little more
than the CB range. At least you won't pay for that priv.

>at all.

While we can argue about what frequencies the bill covers (I think it
only covers the allocated to cellular frequencies in the 800-900 MHz
range, not the whole range[1]), it says nothing about possession of a
radio that gets those frequencies. That's next year.

-andy

[1] - What exactly constitutes "receive"? Does a radio that picks up
a cellular image qualify? (I'd assume so, but ....)

In article <1991Oct4.173623.7163@usenet.ins.cwru.edu> ah157@cleveland.Freenet.Edu (Rob Henry) writes:
>
>Everyone seems to think that I am keeping this "war" alive.
>I only respond to extremely bad posts which refer to myself or
>aj008 Aaron Barnes.

Maybe because your buddy Aaron was talking about an AM band transmitters with a 20 mile range before all this started. See appended postings from sci.electronics (another Usenet newsgroup for you folks on the mailing list.)

>All I did was ask for plans for a lousy transmitter that has
>no range.Everyone else brought up licenses and illegal activities
>I was supposedly going to commit.All this was going to be was
>something to do one rainy day after school or something.I was
>NEVER going to do anything at all remotely illegal with it,I
>have much better things to do than screw with the Feds and
>sitting in jail.

Since nobody actually gave any decent references, here are some.

1) Title 47 Code of Federal Regulations, Parts 0 to 19. This is a book published by the federal government with part of the FCC regulations. There are 4 more. You can buy this for about $20 from a government bookstore or the Superintendant of Documents. If that's a little too much, check at the government publications section of a large library near you. The part of the regulations a licence free transmitter operates under is Part 15. Two paragraphs of part 15 that are important are 15.205, Restricted bands of operation, and 15.219 Operation in the band 510-1705 kHz. The first is a listing of bands, that if they find you there, they (the FCC, Coast Guard, FAA) will be very upset, as you have probably intefered with some navigation system or distress frequency. The second is the paragraph allowing operation in the AM broadcast band. Summary: You are limited to 100 milliwatts of input power on you final stage, and your antenna is limited to 3 meters in length. (Be aware that if you find you can understand this book, you're no longer an electronics enthusiast, you've become a lawyer. ;-))

2) "The Mouse That Roared" aka "Your Own Legal Radio Station", Monitoring Times (magazine) March 1990. This article also has a list of further sources of information and equipment. (also note in the article "Ham Operator Charged with Piracy" in the Communications (short notes) section, more information in the May 1990 issue.)

3) Forget the new ARRL handbook. Since the rewrite in the early '80s, it gives no information on AM transmitters. Old ARRL handbooks from the '60s are a different matter.

4) Check out back issues of Radio-Electronics, Popular Electronics and whatever you can find. Home Broadcast station and Phono Oscillator would be some buzzwords.

5) There used to be kit companies that specialized in selling to education market. I remember some friends building a home broadcaster kit. Ask a shop or science teacher if (s)he has any catalogs.

3527. DX Map Hypercard stack

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-07 19:58:46 UTC
From: saaf@joker.optics.rochester.edu
Message-ID: <SAAF.91Oct7155846@joker.optics.rochester.edu>
Source record: 292784

The new version of DX Map (1.1) is now available via anonymous ftp
from joker.optics.rochester.edu (128.151.240.1) in the file
ham/dxmap/DXmap1.1.hqx. If you do not have access to ftp, drop me a
line (saaf@joker.optics.rochester.edu) and I will e-mail you a copy.
The binhexed file is about 100kB in size.

DX Map is a Hypercard stack for the Macintosh that has information
that is of particular interest to amateur radio operators. The stack
requires Hypercard 2.0. DX Map displays a world map and allows one to
locate any of the 300+ DXCC countries on that map. Additional
information such as CQ zone(s), local time, distance, and bearing is
also given. The map displays the grayline, indicating the areas of the
globe that are in daylight and darkness.

The stack is freeware. It may be distributed in part or in whole
provided that it is distributed for free.

DX Map 1.1 by Len Saaf, NV2Z

3528. Info about SARA satellite?

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-07 20:25:50 UTC
From: daniel@usna.navy.mil
Message-ID: <1081@usna.NAVY.MIL>
Source record: 292789

Does anybody have information about the SARA (Student Amateur Radio Astronomy) satellite? I've seend it referred to as OSCAR-23, but I don't know if that's correct. I've seen two different downlink frequencies given for SARA, but I haven't heard anything on either one. Does SARA continuously transmit or does it operate only over Europe?

Does anyone have an Internet address for the French group that built and is operating SARA? If they downlink data continuously, we could receive it and email it to them.

Also, is this the newsgroup for postings about amateur radio satellites?

Thanks for any help you can offer.

While we're on the subject of CW in odd places, does anyone else remember the Startrek episode where Captain Kirk, Spock and McCoy get accidentally transported back to Earth of the late 1930's and Kirk has a trist with a peace advocate (who, it turns out, must be killed in order to avert Hitler winning WW2)? When trying to rig up a future-viewing/transporting device, as Spock operates it, one hears rather chirpy CW sent with a bug. I've forgoten what the CW said.

Another song that features CW is YYZ by Rush. Rush is a Canadian hard rock band, and YYZ (one of their few instrumentals) is the airport code for the airport in Toronto. At several points in the song, YYZ is sent in Morse Code by changing chords on a keyboard, with the higher pitched chord representing a dash and the lower pitched chord representing a dot.

In article <1991Oct7.154102.7492@mailer.cc.fsu.edu> djb@mailer.cc.fsu.edu (David Brightbill) writes:

I spend a lot of time on a bicycle and am thinking about mounting some sort of antenna on it for 2m. I've thought about a 1/4 wave whip on the luggage rack but it's often full of sleeping bag or tent. I checked out marine antennas but they weigh too much. I looked at a bike flag mast at the local Wal-Mart and think there may be some hope there. How would a 2m dipole mounted on the flag mast do? I could use any smalish wire and either glue, tape or heat shrink tube it to the mast. The mast would serve the additional role of making the bike more visible to folks driving in air conditioned boxes.

When I used the bicycle as my main transportation I mounted a small bracket and Motorola mount off the back of the rack. On the mount was a Larsen 2/70 with reflective tape on it for extra visibility. I used an HT and speaker mic in the handlebar bags and an occasional gel-cell for longer life.

You could probably put a flag at the end of the antenna.

Now that my commute is >20 miles I use 2 wheels and a motor, HT in the tank bag, wired helmet and vox unit. I am still considering where to put an antenna (usually just use the duck) and am thinking of a BNC on the cowling and a diamond HT antenna. Or, a Motorola mount and an Austin 500C.

Because, Sorgatz, you are a CLASS A FUCKING ASSHOLE. You are not only lid of the month, but you, as far as I am concerned, are LID OF THE CENTURY. This college kid (who happens to hold an amateur extra ticket) holds you in the lowest regard. I hope I never fucking hear you on the air. I would probably throw up all over my rig if I did....So, Ignoramus...what say you an me go head to head with our theory, ASSHOLE? I am very interested in transmitters just like the person who posted the inquiry. And I am an ELECTRONICS ENTHUSIAST, also. I will get in touch with the person in question and, if he so desires, mail him MY FUCKING COPY of a 60 watt AM BC transmitter.

You know, the funny thing is that I was just logging onto the group here to ask if anyone could help me with my VHF power amplifier design for 2m. And so I filtered through all of the posts regarding transmitters and recievers. Lo and behold, I find 3 pages of replies to an article dealing with "transmitter/reciever help". I was delighted as I read the first article. However, upon reading the subsequent replies, I nearly lost the dinner I just ate. Sorrygatz, you seem to have royally FUCKED UP the entire purpose of the group! You should have your fucking account deleted! I am so fucking pissed off at you right now, I could shit green and spit wooden nickels (ACK! Forgive the cliches).... YOU ARE SCUM. GO AWAY! Take your fucking tongue and lick the tank coil of a goddamn 1500W linear as it is transmitting, asshole!

-Love RFBurns... Anyone wanting plans for the AM TX get in touch with me.

3539. College Amateur Radio Club net

Source record: 292790

OK, I would like to try the college net again. Not much turnout
last week, but maybe the notice will generate some more interest.

I (W4AQL) will call for all college stations this Wednesday night
(Wed. 9-Oct) on two bands.

0100Z 21.255 +QRM (moving up for QRM)
0145Z 7.205 +QRM

If anyone would like to phone during the net, the phone number is
(404) 894-2971. I will also be logged in to this machine occasionaly
during that evening. If you send mail, I can listen extra hard for
you.

BTW, for those of you that live and breathe GMT, that will be Thurs. morning
GMT.

Have a listen. We have 1.5 KW on both bands, a tribander for the hi bands
and a 2 el. beam for 40m. I will be looking for a west or north station
to help with net control on 15m. 15m might be closed by this time, in
which case, just try for us on 40m at 0145. If anyone has a problem with
both these, they can email me and we can try a sked on any other band.
However, I do not anticipate calling for general checkins on other bands.

I hope to see you there.

This is not a flame. What does it take to be an "accepted expert witness in this area?" I also have a First Phone w/radar endorsement (well, NOW it is a general phone, since a first phone is non-renewable). I got the license 27 years ago when I was in high school. Can I be an expert witness?

How about the 78Hseries? TO-3 package, and up to 8a?

I've got several 78H12 devices in several power supplies....
Digi-Key has them.

>Does anyone know of any? Is a 12V supply sufficient, or does
>one need 15V?

A while back a friend of mine needed something like this. His father dug up a manual (with schematic!) of a Sears automatic battery charger. The key word was "automatic" - in that it had auto-shutoff.

He purchased a replacement control board and SCR (seperate item) for about $9.00, and gathered the rest from the junk box, then packaged the whole thing in a .50 cal ammo box. Wasn't much to it: transformer, bridge rectifier, control board, SCR, heat sink, ammeter, some #8 stranded wire (snowmobile starter cable works well) and clips, not much else.

Might want to take a trip to the local Sears auto center, grep a model number then hit the parts desk for a manual...

>on their repeater, I'm free to tune somewhere else.

Just for those who are not aware of the history of "435", the machine
has had half-a-dozen trustees and sites over the last 20 years. It is
also a wierd split system: the input is 146.40 and the output is
147.435 mhz. The original site was Mt Wilson, home to 99% of the FM and
TV transmitters in LA, and according to folklore those channels were
the only "holes" in the grunge on the mountain - and the grunge was
enough to send 30w _down_ the feedline. A friend of mine actually got
zapped off the feedline while working on the repeater one day, so a Bird
Termaline was plugged into the heliax and he saw 32w coming down the
cable. Anyway, the article dd not make it plain that the repeater is
called the Mt. Wilson system, is sponsored by the Mt Wilson ARC, but the
system hasn't been on Mt Wilson in over 10 years. It is currently on
Saddle Peak, near Malibu. If you want to find it on a map, Saddle is
not on the AAA LA & Vicinity map, but is shown on the Ventura map, in the
overlap area between the two maps.

I've been up there many times - a UHF system has needed my attention
over the years....

Anybody been to the Saddle Peak steak house? Is it any good?

Please stick to one subject - a closed system simply requires club
membership, and membership of a closed system is available to anybidy
who wants to join. "...or just have the proper PL in your radio" refers
to an open system that happens to require PL.

>Without these, your point will not be heard. On 435, one of the
>pre-requisites is that you run enough power to make yourself heard
>through the system. The regulars on the system will be the first to
>admit this. If you are on 435 and are getting jammed out by someone
>else, it's usually looked upon as the fault of the weaker station for
>not 'using the minimum power necessary to facilitate communication,' as
>stated by our good ol' FCC.

This attitude is why many LA hams consider 435 to be a sewer. ANd why
more have gone to 220, 440 or 1200.

And why should someone need a Motorola B93MPB into a 16 element beam
antenna ? Over 2.5kw erp?
(A B93 is 330 watts continuous duty, for those who don't grok Moto model
numbers)

The "ultimate base" was sold when the person got transfered out of town...
I helped to build it, install it, move it _twice_, dismantle it (the power
transformer alone was > 300 pounds, not to mention the rest of the beast!)
and ship it to the new owner in Arizona. He was willing to ship it
beacuse it was a rare beast: it came from the Moto factory on a 14x mhz
channel - not a conversion from 150 or 160mhz.

But damn! could it get a piece of RG-8 warm....

My wife and I do a lot of 2-meter/70cm bicycle mobile. We have decided (after experimenting with rack-mounted antennas) not to use anything that tethers us to the bicycle. With a coaxial clip on our helmets (it's not quite as bad-looking as a hamfest hardhat with an antenna sticking out the top, but it's close), we have wonderful bike-to-bike communication and can hit local repeaters over the lake ridge here in Cleveland. Great fun.

At the Dayton bicycling forum, there was some discussion about bicycle-mobile HF. Antennas were mostly rack mounted, rigs were in trailors. Laura's disappointment was that no one could document bicycle-to-bicyle HF contacts _while in motion_.

Keep us posted...

Use the mast to support a twinlead J-pole or use a coaxial sleeve dipole.
Feeding a regular dipole in this configuration is going to be a nightmare.

3550. Sony and Icom GPS rcvrs

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-08 13:20:42 UTC
From: rc@cmr.ncsl.nist.gov
Message-ID: <9110081320.AA05637@cmr.ncsl.nist.gov>
Source record: 292821

The October, 1991, issue of "Bateaux" (boats) a leading French yachting mag,
has a little write-up on the Sony and Icom (!) GPS receivers.
Here is a paraphrase of parts of the article:

"The measurements of the Sony box are 10x6x4 cm, and it has a moveable
parabolic antenna of 10 cm diameter on a 7 m cable. For power, it contains
four R6 (AA) cells with a life (fairly feeble) of 90 minutes. The expected
main power source is provided by a cordo which can plug into a 12 or 24 V
cigar lighter. A box for R14 (C?) or R20 (D?) cells is available. To
communicate with other apparatus, an RS-232 output is provided.

"The software, not tested by us, seems conventional with a display of the
parameters in a choice of kilometers, statute miles or nautical miles;
99 way-points can be programmed with alphanumeric indication as well as 9
routes. The liquid crystal display has two lines, but there are three pages.

"Data entry, such as the coordinates of a way-point, is made, not by a
keyboard, but by scrolling an alphanumeric display with buttons.

"ICOM offers the GP 2000, a 'black box' unit (at the same price as the Sony).
It is comprised of a receiver and calculator for GPS, but NO DISPLAY; the
GP 2000 is connected to existing apparatus (like Transit, Loran, Decca,
navagation center) by an socket for MMEA 180, 182, 193, or RS-232.

Now, of course, when someone plays a tape of that repeater at the next WARC
as evidence of the State of the Art in amateur radio communications, we should
not be surprised at coming back with a 10kc-wide cw-only ham band...

I don't personally care about "obscene" language, and they aren't jamming me,
but I really don't have much respect or concern for people who feel they MUST
act like jerks regardless of the consequences for themselves or others.

3552. Pirates

Subject: Pirates on WWV

About 6 weeks ago, I observed on WWV's 5.000 MHZ frequency an interferring LSB transmissions in Spanish, with quite a strong signal. Beam heading seemed to indicate in the general direction of Caribbean islands (KP land). I thought that the use of this channel for anything other than standard time and frequency transmission would indicate an intruder. On the chance that this was real and that my Drake TR-7 reception was not impaired, I called the FCC monitoring station in Laurel MD (301-725-3474) and patched the audio from these transmissions over the phone. Not only was the FCC very interested in this, but the immediately confirmed (with some more sophisticated gear than I have in my shack) that my findings were correct. This conversation in Spanish between 2 or more stations continued on for hours. The FCC operator said that he would triangulate the signal with another government agency and possibly the DEA. Well, you never know what one will hear on the air these days. If it was drug runners communicating, they sure picked an obvious place to be heard (exactly on top of WWV). Has anyone out there heard anything like this in the past?

While it was never admitted in public IMHO a lot of hams in southern
California knew this and that's why the machine has been around all
these years. And while we're talking about garbage machines let us not
forget 146.61 in southern California.

I was on 435 for many years and in the late 70's it was one of the
finest repeaters to be on despite the fact that the problems were
starting to worsen. It has gone through cycles of good and bad. A lot
of this depended on how much the people who were on the repeater cared
about it. After the FCC took away the licenses of some of the hardcore
jammers in the early 80's 435 experienced a "rebirth" where it was a
fun repeater to be on.

Alas this "rebirth" went the way of the dodo when Dave Faraone WA6KOS
the repeater owner and trustee passed away in May of 1983.

There were a lot of fine hams on the system and there was always
some interesting discussion going on.

Sure, 220 is alive and well. Most of Ham Radio is alive and well. But even at its best, Ham Radio will never be important to the Feds. The FCC just wishes we'd go away and stop bothering them, and then they could give our frequencies to commercial and military users who matter in the political dimension. Remember, hams got "200 meters and down" in the first place because everyone thought that those wavelengths were useless. It was just a quirk of physics that the most useful frequencies turned out to be in that range. As soon as everyone got wise, hams lost most of those frequencies; all that's left are very small segments in the lower HF bands between 160 and 10, and the VHF/UHF bands. The VHF/UHF bands are huge, especially in the upper bands, because up until now, they wern't very useful. As technology makes them more useful, other "real" users will want them, and we will lose them, as we've lost most of the bandwidth we started out with way back when. Like I said before, I hate the idea, but I'm very pessimistic. Yes, we should all support the ARRL, yes we should all write the FCC and Congress, and yes, we shouldn't go down without a fight, but I think the handwriting is on the wall.

>with millisecond QSY I can sneak a quick look elsewhere should I want. At least
>the FT 1000 gives stereo audio so you can decide which freq which signal was
>heard on.

The choice of rigs is much like the ford vs. chevy argument and any of the current rigs will each do an adquate job. I ran similiar comparisons and wound up with the Yaesu FT1000. One of the major decision points was the availability of local good service, and the local Yaesu/Icom dealer let me use both top-of-the-line rigs before making a purchase.

The second receiver is much more useful than you would expect. First is the ability to hear on your Tx frequency in split operation. I tail-end and am able to map the frequencies of calling stations so that a quick QSY to the station the dx is working is quite easy. You cal also experiment with diversity reception which in my case is nest with CW operation. The signal seems to lift from the QRM and copy improved. Enjoy your new rig and remember that 10 minutes after you buy anything it becomes obsolete.

The FT1000 also has the best CW tone with the narrow filters that I have ever used. My ex-940 would Riiiiiiiiiiing like crazy and about an hour of CW at a sitting was all I could manage before having to QRX.

Source record: 292770

I battled this one for a while. My experience:

1. The switcher power supply is a rich source of noise. Replace the line cord connector with an intergrated line filter connector. New they are $10, but you can find them in "surplus" stores for $2-$3. This was the MAJOR improvement.

2. Make sure all cables are shielded and have metal hoods. Insure the hold down screws are on tight.

3. Make sure the cabinet is making good, solid contact. Watch the paint. Make sure you use a star washer under the screws to get good contact.

4. Use ferrite cores on the cables to keep the trash inside. R/S sells these things - they are some what pricey, but if you have no other source...(they are split so you can wrap the cable around them with out taking the cable apart)

5. I have a NEC multisync monitor (about 1985 or so) and that thing is completely RFI tight...the video cable on the other hand... a couple cores helped this problem. Your mileage may vary on other monitors. To check the monitor, turn it off while rest of the PC is running. If you have problems...use conductive paint or metal screen to shield the inside. Don't forget to ground the shield. Don't forget the line filter. The multisync is well shielded and has a line filter.

6. GROUNDS!!! Ground the case, and it also helps to ground the printer and monitor.

I had a PC that started out at about S7 on 10/15 meters and ended up under S1. I could see a small increase when the PC was turned on but it was quite tolerable. On 20 meters and below there was no problem since the PC noise was below the normal noise. Another thing, I recently replaced the desk top case with a new tower case. The new tower case was far more enclosed than the old case. I can't hear the PC now! (of course all the above mentioned 'tricks' were in place).

Hope this helps!

I worked a guy at 12:19 UTC that was working people one after another.

This was on 7.004 (pretty close). I got his call as 3D2HA. I was a bit

concerned as that might be Fiji, and that would be quiet tough for me to

get (and 599 both ways !!!). I guess I don't beleive it either !

Does this mean that whenever Air Force One keys one of it's kilowatt HF transmitters it automatically crashes? I don't think so. AF-1 normally flies with at least one HF transmitter and one UHF transmitter continuously keyed with others going intermittently. It's now a 747, and I don't know where they get all that power, but the fact is, it's possible to operate all kinds of transmitters without being a safety problem. Some new fighters are 'fly-by-wire' and there could be EMI problems with them if not properly designed or repaired.

It is possible to receive 800 MHz cellular telephone transmissions on a commercial FM (100 MHz) receiver (in spite of HR-1674, hi hi!) While it's a bit of a stretch, it may be possible to overload the frontend or one of the IF stages of a 10 GHz radar.

We really need an FAQ list in sci.electronics; this one seems to come
up every few weeks.

Note that deliberately jamming police radar involves several criminal
offenses (serious jail-and-criminal-record crimes, not just traffic
tickets), is not that hard to detect, and is something the police have
absolutely no sense of humor about.

You can call ICOM tech service (sorry I don't have the number handy) and ask for a tech brochure on the programming interface for all their radios. It used to com with a schematic of the EIA-232 to ICOM CI-V converter. The Technical manual (about $8.00) for the 735 has (or used to, as I can't vouch for anything more recent than three years ago) information on the interface as well.

ICOMs tech support is great, once you get through the phone system. The tech notes used to be free, and you should get the service manual anyway, 'cause it has all the info you may eventually need for minor repairs (such as part numbers) anyway.

/Tjp

P.S. ICOM people on the net. Can you post a description of the converter?

Desense is reduction in receiver sensitivity. This would yield, if anything, _no_ reading on the radar gun, not an inaccurate reading. And no, desense is not the phenomenon that occurs when you transmit an out-of-band signal near a radar gun.

From experimenting with ham-band transmission (HF through 440) and radar, it seems that there are two ways to cause invalid readings in a radar gun. The first is interference to the digital logic. This seems to generate very erratic readings, and is usually caused by transmitting RF very near to the counter unit (in the case of two-piece radar units). The second is rectification of RF, which is most pronounced with AM, modulating the carrier at the frequency you want to display. For example, transmitting AM that's modulated with an audio tone from an AM signal generator, it's pretty easy to get the radar gun to display a speed that corresponds to the audio tone. This is just caused by rectification of the AM signal prior to the counting stage. The counter interprets the AF tone as a doppler shift, and displays the speed that corresponds to the original modulating tone. This is why CB's are well known for causing interferance to radar - they use AM. AM is the worst-case scenario.

In the real world, it's somewhat difficult to get a false reading on a radar gun with an external transmitter. The main reason is that most decent radar guns (with a few notable exceptions, like the first three versions of the MPH X-band K-55, CMI SpeedGun 1, and a few others), have RFI-detection circuitry built in. If the radar gun "sees" RF in the area (usually uses a simple diode detection scheme), it lights up the "RFI" light on the radar gun and inhibits the speed displays. This _usually_ works, but it isn't foolproof. It's possible, with careful positioning of the radar gun and/or transmitter to fool the gun into displaying a false reading, but the chance of it happening in a real-life scenario with a good radar gun is slim. The poorer the radar gun, the better chance you have of interfering with it, in general.

--- Jeff

P.S. I have used the RFI as part of my defense in traffic court.
Sometimes it works, sometimes it doesn't. You have a _much_ better
chance if you informed the cop that you were using a radio at the
time of the stop, especially if you can get him to make a note of it
on the back of the ticket. The judges seem to give it more credibility
this way than if you just came to court and said "I was using a radio
transmitter at the time - you gotta believe me!!!!"

It would help to know if this equipment looks new or old. The Army has a nasty tendancy to repeat numbers of equipment. I have info on the NEW TRC-191 equipment, but I'm not sure if this antenna fits into its operation. If this matches, you have found an antenna for the new military cellular phone network.

Chris, I didn't get an INTERNET MAIL address for you from your message ... I would be happy to provide some of this information to you directly. If this antenna IS from the new equipment, I would be interested in obtaining one ... for my National Guard unit!

[from Olli, OH0XX]

ZA1A PRESS RELEASE # 7 (4th Oct. 1991)

NEWS FROM TIRANA

Today on Friday, the graduation ceremony was attended by twenty people at Hotel Tirana. Twelve new amateur operators, who passed the IARU sponsored course and exam, were honored their new call allocations - from ZA1TAA to ZA1TAL. They will be duly licensed shortly and they will be immediately operational.

The remaining IARU team will continue their operations now focusing some new frequencies and modes; RTTY and six meters included.

Almost 70.000 QSOs are made exceeding the early estimations.

This international group will be leaving Tirana on Monday, the 7th of October, after their most succesful mission. They would like to thank their hosts, the entire amateur radio community and supporters of ZA1A for their interest.

3570. Yagi antennas

Source record: 292689

I would like some opinions, humble of course, regarding feeding VHF Yagi antennas. In particular the relative merits (measureable) of the Gamma match versus the Beta (hairpin) match.

I have built and used both. UHFers seem to favor the beta match with insulated elements.

Your information and opinions are appreciated.

For any of you who don't already know, companies like International
Crystal maintain info on a lot of these radios so you may be able to get
a crystal by just calling them and describing the radio. Otherwise, they
can use the old one to determine the specs for the new one.

Actually, it's expensive but the CT-17 is almost worth it just to see
something properly designed :-). The cheap way is go into your serial
card and remove the 1488/1489 RS-232 chips and jumper the TTL signals
out to the connector. (Not RIGHT, just cheap :-). Next best is to build
a level convertor using 1488/1489 or MAX-232 devices.

I'm working on a design which requires no power other than the RS-232
port itself, don't know yet if it will work.

2800 Meadowview Rd., Sacramento, CA 95832 (916)427-4281
RACESBUL.190 DATE: October 7, 1991
SUBJECT: DRILL OR EXERCISE REALITY, PART 3/3
(By April Moell, WA6OPS. Conclusion)
8. You are not likely to handle much traffic. In a drill most people rarely simulate the kind of phone stress they would have in a real incident. Whether you are in a drill or the real thing, you are a support communications system. YOU ARE THERE JUST IN CASE. QUALITY, NOT QUANTITY, IS WHAT MATTERS. If you are on duty for three hours and handle only one message -- it was still important and worthwhile for you to be there. If you can get the one message through that they need -- YOU ARE VALUABLE.
9. The more exposure volunteers have to the agency they serve, the easier it is for all concerned when we are activated.
###
The preceding was prepared by April Moell for the Hospital Disaster Support Communications System in Southern California. Throughout you can see the importance of the necessity for reliability, dependability, performance, and knowledge of the served agency by its volunteers. There are some volunteer activities that require little or no prior knowledge of the served agency by a volunteer. This is NEVER the type of volunteer we address in the weekly State RACES Bulletins and other publications. Like the hams and other volunteers who serve the hospitals, they must be a part of the served agency system BEFORE the emergency strikes. Such a volunteer seeks out an agency or organization ahead of time. They then serve because they WANT TO as a part of an agency, an organization, or a system as a team player. There simply is no room for loners. The days of simply sitting down to any radio, anywhere, with no knowledge of the served agency are gone. New people learn the system and the procedures. So do the old timers or they lapse into retirement.
Probably one of the most frustrating statements from a soul who stands up at a recruiting session for emergency

communications specialists is, "I've been a ham for over forty years. What in the world can YOU possibly teach ME?" Again, thanks to April and the other professionals who send us Bulletin material.
As retired Hawaii State RACES Radio Officer Henry Gamache, KH6AIN, once said, "Just because you're an Amateur doesn't mean you don't do a professional job."

Greetings,

Here is a couple of rough schematics of circuits which would allow you to
use your three terminal regulator and a high current transistor. Biasing of
the transistor and the diode is not necessarily complete.
A load resister across the output and bypass capacitor from base to
to ground may be need to stabilize the circuit.

Good Luck,
Bill Thomas

Jon
N1ILZ
jmccombie@bbn.com OR {harvard, others}!bbn!jmccombie

The D-104 microphone is a HIGH impedance device (about 1 meg) and
has a wide frequency response. Also, the rig you are using in SSB or
even AM with its internal SSB filter can't use the D-104 bandwidth to
full effectiveness. I used one of theses mikes 30 years ago as WA2FNF
on an AM rig with high level plate modulation. Unless one was to use
this kind of mike on that type of gear, I would say that for a modern
SSB transceiver with a 2.7 (or narrower) LSB or USB filter, the D-104
is not only a poor match impedance wise, but a poor choice for
frequency response reasons. Much of the voice energy from the D-104
(above 2.7 KHZ) will be lost anyway. The impedance mismatch results
in such a high loss, that most of the audio never gets past the first
microphone stage in the rig. The only way to use the D-104 (and I
wouldn't recommend it) is to use a small audio matching transformer,
e.g. 600/50K or more.

BS! Yeah, some cop is got a spec analyser plus his radar gun! (First he sweeps the electromag spectrum for other radar signals, then he shoots at the passers by with his superscope.....)

I know someone who built the "Radar Calibrator" out of a popular magazine, then subsequently (very successfully I might add) used it when doing 80 in a 45 right past a friendly police officer in a speedtrap. He had it rigged to transmit radar signals at 25, 35, 45, or 55 MPH that would automatically be activated when the detector went off. NIFTY-ASS DEVICE! It was a bitch to build though...The Gunn diode was hard to come by.

For powering the Yaesu FT-411E with 12 volts, get a PA-6 adapter. This slides onto the bottom of the radio in place of your battery pack and your battery pack can slide on the bottom of the PA-6. The PA-6 will charge up your 7.2 Volt packs (not the 12 volt ones) while you are using the adspter on 12 volts. I melted a small hole in the side of the Naugahide case that comes with the 411 to plug in the 12 volts.

good luck

Stan

No, membership of a closed system is available to those whom the owners
of the system choose to admit. There may be closed systems open to all, but
there are lots of closed systems open to only an elite few (Cactus comes
to mind, although the "few" is a lot of people these days).

3581. Ham Radio Talk Show Host Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-09 02:02:36 UTC
From: flash@lopez.UUCP
Message-ID: <1991Oct9.020236.14611@lopez.UUCP>
Source record: 292632
Cross-posted to: rec.video.satellite,rec.radio.amateur.misc

The LET'S TALK RADIO Satellite Network is looking for someone to host a weekly one hour show about ham radio. LET'S TALK RADIO is a satellite delivered talk show listened to by TVRO satellite enthusiasts on Spacenet 3 Channel 21 6.2 wideband audio, and can be heard on ANY home satellite system.

The program host will take calls from listeners, and answer questions about ham radio topics, so a basic understanding of general aspects of hamming are desired. Of course if the host is stumpped, other listeners will usually call in with answers, so rocket science degree is not required.

Also not required is ANY broadcast experience, just the desire to do a good show, and a somewhat outgoing personality (gift of gab) to keep the show moving when people are not calling in. If you HAVE a professional background, so much the better, but it is definately not necessary, as most of the hosts of the present shows have never done any work in commercial radio or TV.

If you are interested, you can call Jim Bass at LET'S TALK RADIO, and mention this posting... Or send me EMAIL for more details.

LET'S TALK RADIO is a service devoted to communications hobby technology. Program hosts are not compensated, at least not at this time, as any funds the channel makes through advertising goes to paying communications charges. BUT it is a great way to meet people and have fun.

LET'S TALK RADIO Phone Numbers:

1-315-673-3752
1-315-673-9058

One of these numbers will connect you with Jim Bass during the daytime hours.

Since we're now into talking about details about operation on 435
I'll have to refresh Mike's memory of events.

Flame thrower set on mild. :-)

I was the owner of the B93MPB. It was rated at 250 watts continuous
duty but did put out much more than that. (Love those Motorola
radios).

The radio was acquired at a swap meet and was never "built" or
installed by Mike. The only contact Mike had with it was to dismantle
it from the rack so it could be transported or shipped by the new owner
to Arizona. (At least that part is correct)

Flame off.

Anyway, it was rather sad to need that type of power to get into
the repeater.

There was one evening when I talked for a solid 10 minutes with
the "MPB" and yes Virgina the RG-8 did get quite warm. In fact
the PL-259 at one end of the coax was too hot to hold.

The radio did have the capability to be made into a remote base or a
repeater. It was to my knowledge a somewhat rare radio and IMHO the
successor to the Motorola green box. The green box was (in the L.A.

area) a rather well known military surplus amplifier with a pair of 4X150's in it. There were a couple of green boxes used on 435 over the years.

I know that this will quite probably surprise to say the least many people, but when you care about a repeater and the people on it you don't want to get run off the frequency. It was a case of not giving in to some rather indecent hams.

Many people left as Mike said to go to other bands but some of us were willing to stay and try and keep a good repeater alive.

As I mentioned in a previous posting there were a lot of positive things about the repeater and the Mount Wilson Repeater Associaton.

Among them was a tremendous public service effort know as "Operation Santa Claus" to allow children to talk to Santa Claus via ham radio before Christmas.

There also was a lot of help extended to prospective hams.

There were also many wonderful t-hunts held on the repeater.

Unfortunately along with the jammers, bootleggers and hams who enjoyed harrassing people there was also a tremendous amount of politics and personal agendas both on and off the repeater.

As shocking as this all is to some people let us not forget that events such as this occur on HF and other walks of ham radio.
Not that this excuses anything that happened on the repeater.
Even more surprising things happened that made it seem like a soap opera.

Source record: 292692

I crossposted from this group to packet an article about the hazards of radium painted radio and meter dials. Bruce KQ2E sent this message below:

Sb: identifying radium paint

Just as an aside to your warning about *radium paint*... One way to find out if your dial or hand is covered with the real thing is to keep it in the dark for a few hours, and look at it without exposing it to light beforehand. If it glows without being first illuminated by light, it's probably radium. Another, more exotic way to test it is to put a small roll of high speed film (>/= 1000 speed) unexposed and in close proximity to the dial for about one day. Then, have the roll developed and see if there are any traces of exposure on the film. If so, you just proved what the dial has on it for sure!

Referring to radio transmitters causing problems with aircraft
electronic equipment...

>>This is very credible. Remember radio is "square law", i.e. the power
>>decreases as the SQUARE of the distance! When you compare a separation
>>measured in feet with a mile or so then you can generate as intense a
>>field quite easily.

>>For those who haven't done this, key up your handheld next to a
>>flourescent light. It may have to be almost touching to ignite the bulb,
>>but sometimes you can keep it glowing from several feet away. I have
>>seen a 75M AM rig (200W) which kept the light at full brilliance for
>>almost 100 yards away from the antenna.

There is a 5,000' mountain called Mt. Wilson just northeast of Los
Angeles that has 99% of the FM and TV broadcast transmitters
concentrated in a small (relativly) space - maybe 1 mi by 1/2 mi.
Just on TV there is channel 2, 4, 5, 7, 9, 11, 13, 22, 28, 34, 46, 52.
I do not know the power levels for them, but Channel 28 has over 1megawatt erp.
Channel 4 has a 750' towwer, and channel 7 has more.

The standard Mt. Wilson "flashlight" is a flourscent tube inside a mailing
tube. Stays lit 24hrs a day, and never needs batteries.

Closer to my house is KRLA, a 50kw AM station, and KALI, a 10kw AM
station. KRLA has flourscent lights mounted in their "doghouses" - the
antenna matching unit containers - but no power run to them. KALI is a
manned site and the operator uses a hand-held flourscent tube to read
the meters.

>In what price range do these antennas run?

7-10 years ago I looked at the disguise antennas. At that time
Antenna Specialists seemed to be the only game in town, but that was
then, and this is now... The 2m whip that would have fit on my Ford was
about $50 then...

Also realize that disguise antennas are a compromise as to gain and
pattern. The one I was looking at claimed 2.5db, but I was told to
assume unity, and that a fender mount would really mess up my pattern.

Even the famous Jim Smith (VK9NS et al) blew the written Extra exam when he took everything in one day in the U.S. As I recall, he said that it was the band allocations for different license classes that caused his downfall - it must have been more than that, though, since you can get about 10 questions wrong and still pass, and there most certainly aren't that many questions on the band allocations...

Source record: 292701

A couple of neophyte questions... This past weekend I worked a station with the call TV6FS (if memory serves correct; certainly the prefix was TV) in a pileup on 10 meters. Despite repeated questions about the QTH from stateside amateurs, the best that the operator would come up with was 'Utah-Eu 32'. My guess is that 'utah' was a phonetic for the letter 'u'. I note in the ARRL Operating Manual that the TV prefix is assigned to France and the operator's QSL manager was in France. Does anyone know who/where this station was?

A second question: I finally worked ZA1QA on 10m on Sunday. They had just gone from simplex to split operation and the inevitable pileup had not yet developed. What's the proper way of obtaining a QSL from these folks? I take it that 'via the bureau' won't work? I didn't see any mention of the QSL routing in the QST article on Albanian operations last month. Thanks for any assistance.

TV is indeed France, it's one of several "cute" prefixes the French use
to encourage pile-ups I suppose. "Utah" must have been "IOTA", Islands
on the Air, someone here can tell you which particular rock #32 is in
Europe. Some people chase IOTAs the way most DXers chase 'countries'.
I guess it makes a change from those ZAs all over the bands - and, speak-
ing of which:

I really do not know how expert you are with VHF construction techniques, so I will give you a number of sources, and then let you apply them as you see fit. You may already know this, but VHF construction can be somewhat of a black art, where one must pay particular attention to lead length, placement, grounding, etc., much more so than at HF.

One place you may want to go for information is the ARRL handbook, available from the American Radio Relay League, 225 Main St, Newington, CT 06111. You should write them and ask how much they want for it. This book is very popular, and may also be available at a local ham bookstore. It changes each year, but in the 1987 version, on page 31-47, there was an article on how to construct a medium-power 144 mhz amplifier, which would take 10W in and put out 300 or so. It has the flavor of a class C amplifier. There is another one on page 31-54, that requires 19W to put out 700W, or a full 2KW PEP amplifier on page 31-59. (The construction details are given in December 73 and January 74 QST.) These amplifiers all use tube technology, and pretty high voltages.

The ARRL's Book entitled "FM and Repeaters for the Radio Amateur", at least the one copyright in 1972, also has a solid state power amp for 2 meters, starting on page 59. It is designed to operate from a vehicle electrical system, using about 13.6 volts. It is definitely a class C amplifier. This was further described by K7QWR in May 72 QST. The output is in the 40W to 50W range. I had trouble discerning the input power required from the article, but it is somewhere in the range of 1 to 15 watts.

The ARRL's "The Radio Amateur's VHF Manual", at least the 1972 edition, had at least the high power VHF amp.

I would suggest you get a more recent edition if you are serious about building one of these things, so you do not run into a problem of obsolete parts or parts where the suggested supplier has gone out of business.

If you like kits, you might just try to get in touch with Radiokit. They have lots of kits for various things, although I do not know about VHF stuff. Their address is Radiokit, PO Box 973, Pelham, NH 03076, and phone is (603) 437-2722. I have not done business with them in the past, so I can not endorse them. (The Radiokit info was current as of 4/13/90.)

I hope that you find the above helpful, and thank you for cleaning up the language.

Peter Baldwin

The glow-in-the-dark test may not work. The phosphors that do the actual glowing age badly, and after a few decades, don't work at all. Meanwhile, the radium is still cheerfully zapping away, as it will for the next 10,000 years or so. The best test is a giger counter; these frequently show up at hamfests; I've seen working units go for as little as $20.

I've had some experience with the Kustom Electronics Falcon and KR-10 RADAR units in a college campus setting.

We are trained by with the cooperation of a NY State Police RADAR instructor who is stationed in the area. I'll tell you about the approved method for RADAR use.

-The unit is tested for accuracy at least once a year by a certified technician.

-At the start and end of the shift the RADAR unit is checked by the use of two tuning forks. These tuning forks are also tested annually, and according to the factory technician are practically indestructable. (this particular technician has only rejected one tuning fork in the last 5 years).

-There is a test button on the unit that illuminates all of the segmants of the led's for the speed display(s) and the indicator lights.

-There is an indicator light (labeled RFI) that comes on when RFI may cause an error in the calculation of the speed. If the RFI light is on you should discount any speeds that are displayed. In non-scientific tests that I have conducted a 45 watt vhf transmitter does not cause the RFI indicator to light at a distance of about 50 feet or so.

For stationary RADAR:

-The radar unit will display the speed of the largest cross section moving in relation to it.

-There is a sensitivity adjustment for the receiver. Helps to cut out the readings from vehicles farther down the road.

-When a vehicle speed is being measured you do not depend entirely upon the speed displayed on the unit. You also use a visual estimate of the speed of the vehicle to confirm the display. Most experienced police officers can estimate a vehicles speed within 1 or 2 mph.

-The radar also emits a tone that varies upon the speed of the vehicle. You can also judge the speed of the vehicle by hearing this tone. This is just a another way that is used to aid in confirming the vehicles speed.

-The tone and display on the unit will change when the vehicle that is being monitored leaves the field of influence for the unit. This is another step used to confirm the speed that you have displayed is for the correct vehicle.

-If multiple vehicles are influincing the unit the tone will become garbled. Easy to tell that you aren't getting an accurate reading on just a single vehicle. The tone also changes abruptly from vehicle to vehicle, so it is not a difficult problem to tell which vehicle has been "clocked".

-Moving RADAR has other problems that you have to be concerned with such as erroneous readings caused by bridges that you might be approaching.

-The officer running RADAR most often tries to get the antenna pointed as directly pointed to oncoming traffic as possible. Any angle from the radar to the approaching traffic causes an error that is in favor of the traffic, not the officer.

I have had some bad luck with a NCG (COMET) 144/220 duplexer.
The duplexer destroyed the output modules in my IC-900 on 2m and
220MHz.

So far I have sent a letter to the U.S. division in Calif. Their
response (didn't surprise me) was that it wasn't installed
correctly.

I have sent one more letter to them and if I don't get any
satisfaction I would like to forward all info to the main
headquarters (Japan?). Anyone have the main headquarters address
phone#,FAX#??

thanks,
Ken

No, he just notices that his radar gun persistently reads 55 when he clocks you, after you went past so fast that the sonic boom woke him up. :-)
Or, more mundanely, that it reads 55 on a car that is obviously going much faster than other traffic on which it reads 65. Or that it's rock-solid at 55 even as you change speed while passing.

Policemen are not (consistently :-)) stupid. Sooner or later you'll run into an alert one.

In article <1991Oct09.021611.3917@ka3ovk> ka3pgn@ka3ovk (Dave Norment) writes:

>Bear in mind that I'm feeding my kit with 13.8 volts instead of the 9
>volts specified and am using a tuned dipole at 30 feet on a hill.

The general forumla relating power amplifer output impedance,
power output and voltage level is Rout = V+^2 / (2*Pout). If you
rearrange this to relate power output to voltage level it is
Pout = V+^2 / (2*Rout). If Rout remains constant and the power supply
is increased from 9V to 13.8V the output power would increase by
a factor of (13.8/9)^2 or 2.35. This means, if the kit was within
90% of the maximum allowable power at 9V, it is way over at 14V.

I actually have a point though; just because Ramsey sells the kit
does not mean you can just build it and operate it legally. Note:

>For those interested, I'll quote the instruction manual:
>"The FM-10's low power broadcasting capability and other practical uses
>can be fun and interesting for people of all ages, but the FM-10 is
>DEFINITELY NOT A TOY."
>
>"Your non-licensed signal can provide serious competition to a medium
>powered public broadcasting station fifty miles away, a station which
>someone in your neighborhood may have set up a special antenna to enjoy."
>
>Please refer to FCC regulations for non-licensed low power broadcasting.
>Relative field strength is important!

Right. Ramsey neatly sidesteps the issue of whether operating the
transmitter is legal or not. You may need to reduce the output power
or modify your antenna to remain legal. However, I'm not going to
turn anyone in for running a clean transmitter at 2-3x the Part 15
levels.

It turns out that finding my friend's stack of LDE references was not as easy as I thought. It turns out that they aren't all in one place. Also, he was searching for them amongst his stuff when in fact he had given some to me. Anyway, here's a few references. All of them cite several other papers and/or articles on LDE's or related topics, so this should be enough for the casually curious and a good starting point for those who want to seriously persue the topic:

Crawford, F. W., D. M. Sears and R. L. Bruce, "Possible Observations and Mechanism of Very Long Delayed Radio Echoes", Journal of Geophysical Research, Space Physics, v75 #34 (Dec. 1, 1970) pp 7326 - 7332.

Ellis, G. R. A. and G. T. Goldstone, "Observations of long delayed echoes", Journal of Atmospheric and Terrestrial Physics, v49 #10 (1987) pp 999 - 1005.

Villard, O. G., D. B. Muldrew and F. W. Waxham, Jr., "The Magnetospheric Echo Box - A Type of Long-Delayed Echo Explained", QST, v64 #10 (Oct. 1980) pp 11 - 14.

I will be glad to post more as I come across them. 73, Scott

This is slightly off the subject, but it seems like I once saw an ad in the back of one of the electronics magazines advertising a radar jammer. I assume that you could generate your own radar signals which would overpower the reflections from your vehicle. With a little computer work, it seems like you could get the gun to read any speed you wanted. Of course, this would be illegal. I would like to hear opinions from some gurus, however, to see if this could or has been done.

>To quote you -- BS! Yeah, some cop doesn't know the difference between 45 and
>80 unless his radar gun tells him.

Yeah. The "calibrator" might let you do 70 in a 55 zone, but any more difference than that and the cop will be able to tell something is fishy simply by sight. Most cops with any experience with radar guns learn to judge your speed by sight within 5 mph, simply by seeing many cars and how fast they are going by the radar gun.

>>He had it
>>rigged to transmit radar signals at 25, 35, 45, or 55 MPH that would
>>automatically be activated when the detector went off.
>
>I would never call you a liar, but I think I would call your friend a
>liar with this particular story.

The device does exist. I have the plans but never built it because some of the parts were so hard to find. But getting away with 80 in a 45 zone is a bit unbelievable.

There is another drawback to the "calibrator." I knew someone who had it set at 55 mph while speeding out on the highway. He then pulled into a 30 mph zone in a small town and got pulled over for doing 55, because he forgot to switch the calibrator off..

3615. Re: Info about SARA satellite?

Newsgroup: rec.radio.amateur.misc

In article <1081@usna.NAVY.MIL> daniel@usna.navy.mil (Walter K. Daniel) writes:
>Does anybody have information about the SARA (Student Amateur Radio
>Astronomy) satellite? I've seend it referred to as OSCAR-23, but I don't
>know if that's correct. I've seen two different downlink frequencies
>given for SARA, but I haven't heard anything on either one. Does SARA
>continuously transmit or does it operate only over Europe?

SARA is _NOT_ an amateur satellite. To my latest information, the IARU has
officially filed a complaint against the French administration that
issued the license. It seems the license was given in the amateur band
by mistake (a number of weather satellites reside in the neigbourhood,
around 143 MHz).

While SARA sends 300 baud AFSK telemetry, the format has not been made public
to the amateur community. The satellite is not under amateur control.
(not that there is much to control; it contains just a few measuring devices).
The output frequency, 145.955 (145.995 has been advertized but is wrong)
looks just as a disturbance signal in a crowded segment of the band.
Fortunately, the transmitter is only operational when it is within reach
of the French command station, so no disturbance in the USA area.

The reason for it being advertized as OSCAR 23 is probably political: you
probably saw that in an announcement that indirectly came from a
French-spoken Belgian satellite group. I hesitate to mention dirty
political issues like this, but the situation is like this:
- As you probably know, Belgium has a Dutch-spoken 'north' part and
a French spoken 'south' part.
- Most organisations (political and otherwise) in Belgium come in pairs
of two, one Dutch, one French. Unfortunately, they sometimes fight
each other.
- The same goes for amateur satelite organisations too.
- Fortunately, the situation doesn't run out of hand: people don't walk
with guns there. They just go against each other in political issues.
(I said this was messy!)
I can imagine that, because the 'north' wants to QRT the bird, 'south'
tries to get it recognized.
Please note that I don't want to give a bad impression of either side.
This mess is just a fact of life.
(After writing, I realize that this issue is probably a no-no on usenet.
Sorry. On the other hand, I got some data of the bird from the French
half (thanks Patrick!), wanting it to be recognized. As fas as I know,
most of the rest of the world does not recognize the bird as amateur
satellite as long as at least the telemetry format isn't made public.
So far, the thing is NOT recognized as OSCAR 23.

(Look at SARA the same way as you look ad BADR-1, I don't know if you know that story: The University of Surrey (builder of OSCAR 9, 11, 14, 15) had some Pakistani students for some time as part of an exchange program. The students worked in the UOSAT unit. One day, they were vanished, and so were some important drawings of the UOSAT bird. A few months later, Pakistan launches a satellite, which was very similar to OSCAR 9/11: even the output frequency/modulation technique were the same, and most of the other parameters were too. Draw your own conclusions..
BADR-1 used a very low orbit and has re-entered the atmosphere some time ago.)

>Also, is this the newsgroup for postings about amateur radio satellites?
Some Bird people seem to check in here, trying to keep up with the traffic. I haven't heard Bob N4HY (one of the builders of the microsats) in months here. Pity.

73,
Geert Jan

3616. Blue Angel`s freq`s for Fleet Week

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-10 00:26:55 UTC
From: frankfx@volkswagon.EBay.Sun.COM
Message-ID: <8751@male.EBay.Sun.COM>
Source record: 292730

Does anyone have a list of frequencies for the Blue Angels and any other good one's pertaining to Fleet Week this coming weekend. I will be out in a small boat with my BC200XLT.

I would be happy if someone could repost any prior info.

Thank You

Joe Fenech
Sun Microsystems

3617. Re: AEA Isoloop Antenna

>The AEA Isoloop was featured in the April 91 QST Product Review column.
>Contact the ARRL Technical Department Secretary for information about
>QST technical-article reprints.

I'm a big Isoloop fan. It won't work miricles, but it is an efficient radiator. I worked HF0POL on 18 Mhz CW and SSB both yesterday evening. The QST review is of the original model of the Isoloop, which is made of aluminium tubing and covers 14-30 Mhz. AEA has been advertising a newer model which covers 10-30 Mhz (which means somewhat higher efficiency, due to higher radiation resistance, on 14 and up) made from a continuous strap, which gets rid of the losses at the tubing joints.

Unfortunately, AEA has shipped *zero* of these. I've had a back order in at AES since July. I checked with AES last week, and they told me that AEA subcontracted the mfg overseas, and has been having an (unspecified) problem. The AES rep sounded rather ticked at the runaround he'd obviously gotten from AEA. Too bad. It's a neat product. Hope they manage to solve their problem.

>at 55 even as you change speed while passing.

>Policemen are not (consistently :-)) stupid. Sooner or later you'll run
>into an alert one.

Once again I spoke without knowing all of the facts. I was not aware of the
"JAM" indicator.....But even though the cop notices you going visibly faster
than indicated, there's nothing he can do about it. Last week I went home
and was on the way to see my little brother at the high school football game. I had my
radar detector actively listening, and I was doing a good 70 in a
35 MPH zone. I passed (to my horror) one of the StC cops, and immediately
downshifted to a slower speed. I saw the cop light his cherries and swing
around, and I knew I was BUSTED. He stopped me some miles down the road, and
sauntered up to my car...."Son, you were speeding...."
"No, I wasn't officer"
"Yes you were."
(knowing my detector didn't activate)
"Ohh. I thought I was doing 35. Can I see your radar readout, officer?"
"Hmmm...well I didn't clock you, so I can't give you a citation, but
by the time I turned around, you were 3/4 of a mile down the road.
It tool me about 3 times the time it took you to get here."
"We'll officer, I don't think I was speeding. Thanks for warning me."
"BLAHBLAHBLAH"

Moral: He couldn't give me a ticket; he had no proof. Maybe he was just being
a nice guy...Could he have cited me with the distance/time thing?

In case you didn't realize, one of the major benefits of computers and increased communications is that it allows you to learn and gather information much easier than it might be without the use of the computer. Yes, college students should be able to read and write decently well as well as know the basics of research and information gathering. However, what makes going to the library any better or worse than asking a supposedly knowledgeable person via communication by computer? It is a lot easier to log onto your local computer and ask somebody your question than it is to trudge miles down to your local library and then take the time to look it up. As long as the person you are asking IS knowledgeable in the related field, you will probably get the same information as from a book.

Yes, there is a problem with our educational system but not all college students are idiots or illiterate. I'd appreciate it if you would refrain from lumping us all in the same category...

3627. Re: Plans for small transmitter/receiver

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-10 09:21:42 UTC
From: dstock@hpqmolm.sqf.hp.com
Message-ID: <16610071@hpqmolm.sqf.hp.com>
Source record: 292758

NO ONE OWNS "THE AIRWAVES"

NO ONE OWNS GRAVITY

They are physical properties.

Because signals do not stop at borders (and pass immigration control and customs as good patriotic little waves should) International organisations were created to manage the use of electromagnetic waves. Almost every nation is a signatory to the empowering agreements. Each nation enforces the agreed upon rules within its jurisdiction. The rules amount to bandplans and details of who may be permitted to use various bands. One example is that only amateurs who have passed some form (unspecified as to nature or speed) of morse test may be allowed on amateur bands below 30MHz, to do otherwise breaches a signed agreement. A British illegal CBer on 6.9Mhz caused problems to French long-range aviation comms, the french told the brits, He was then prosecuted under british law, no need for extradition.

So although no-one owns the airwaves, there is a well designed system of management. Breach their rules and you endanger your wealth and liberty. No system is perfect, but this one seems effective in preventing total anarchy.

No one owns soundwaves, but prosecutions for "breach of the peace" and nuisance happen.

3628. IC-24AT and battery dimensions

I'm interested in purchasing a thrid party BP-85 battery for my Icom IC-24AT. I understand the extended batteries sold by many third party companies are larger than the battery pack made by Icom. I'm concerned that the IC-24AT with the third party battery will be too large for the LC-66 case. Does anyone have experience with the case and a third party extended battery? If so, please send me e-mail and I'll summarize for the net.

>problems with them if not properly designed or repaired.

Very true. Using the 'copters mentioned as a "for instance", The Army's
Blackhawks were tested for immunity to only 1 volt per meter through part
of the spectrum. On the other hand, the Navy required the Seahawks (almost
the same machine otherwise) to be immune to 200 volts per meter throughout
the spectrum. The Navy operates in a much harsher EMI environment than the
Army does, but has not lost a single machine to interference.

The Blackhawks have been (or are being) refitted with hardened flight control
computers. Thge Tornados are restricted from flying too close to high power
broadcast stations. (Both of these ships were done in by broadcast stations.)

I don't know what was or can be done about the F-16. It was operating within the field of a US Electronic Countermeasures plane which was transmitting jamming signals. I would assume that new operating proceedures would be indicated here.

RF immunity can be built into electronics equipment. I have worked with equipment which is not damaged, and which continues to function properly in very high density fields. (It was tested from 10 Khz to 1 Ghz in 1200 Volt per meter fields.) This kind of hardening is 1) very expensive and 2) must be designed in.

By the way, most "professional" EMI engineers will admit that hams were the first to work in the field, although we caled it "BCI", and later TVI rather than using the more general term.

In article <8777@eastapps.East.Sun.COM> jkeyes@Sun.COM (John Keyes) writes:
> I am going to buy either a Bencher or a Vibroplex iambic CW key

I personally prefer the Vibroplex. It uses a very clever system of magnets to provide tension on the paddles, were the bencher uses springs. I also like the brass and wood base; very pretty on the desk, but I guess that's just a matter of taste. The only thing I don't like about the Vibroplex is the material used to make the paddles; seems like a cheap grade of plastic. I've been meaning to make some new ones out of nicer stuff, but never quite get around to it. Vibroplex also makes the same paddle with a built-in keyer; that's what I actually have. It's a pretty basic keyer (uses the Curtis chip), but works well, and it's nice having it built in. It runs on a battery that lasts a year or so; the standby current drain is so low, there's no off switch! Good luck...

The opinions expressed are my own, and do not necessarily reflect those of my employer.

Its not a matter of desense, but of the transmitter RF really screwing up the phase lock loop in the "pseudo" doppler guns now in use. Also, since there were at least three vehicles involved it is totally impossible to tell which
one, if any caused the reading, thus no conviction with a good lawyer.

There is a company in Colorado called Antennas America (I think...)
that offers an antenna that mounts inside your car window. It is only
3.5" square and very thin. It sticks on like a decal. It was originally
designed for cellular, but versions are made for many different bands.
All are the same physical size. Something like this is probably a
severe compromise, but might work O.K. in a metro area where everything
is fairly close. There are two versions: low power (<35 watts) and hi
power (<110 watts). They differ only in coax used.

> Price is important, so an education on the
> subject may be in order..

If I remember correctly, these are <$75 each. May be less.

> How can I get in touch with manufactures?

I don't have the info at hand, but I think they were in Arvada. CO.
(spelling?)

I know my details are sketchy, but I am considering going this route
for general use to keep my radios from walking off and from drilling
holes in the car. I'll probably keep a mag mount in the trunk when
more oomph is needed.

I have no connection to AA. Heck, I can't even remember much about
them. Unfortuantely, I also do not know of anyone who can relate actual
experience about them. If there is enough interest, I'll dig up the
literature. Anyone in net-land have one of these?

NO, NO, NO! Whether true doppler or pseudo (phase lock loop) doppler,
it is an FM device. It responds to the largest deviation (fastest
moving object) that exceeds its detection level, with some minor
variants due to large signal desense and mixer products that normally
are not a factor. However, a large enough target can mask a smaller
target following. I also disagree with the statement about maintaining
the equipment. Most departments have no idea of what is necessary to
do that or even meet the requirements many court decisions have imposed.
> I can't address it issue of desensing, but I can mention a few.

> - the beam of a radar gun spreads out rapidly. I don't recall how
> rapidly, but it's big enough to get more than one car at the
> ranges the police generally use them at.

The beam width of most of the more popular guns is approximately
18 degrees with a range of about one mile. It picks up low
flying airplanes very nicely, not to mention window fans in houses,
heater fans in police cars and kids throwing baseballs.
> - depending on the gun (you should suppoena the gun, it's instruction

> You also need to ask him what, if any, training he had on using
> the gun.

Many court decisions have helod that the use of an internal
calibrating device is not sufficent as it amounts to the device
calibrating itself. Only an "undamaged" tuning fork, tracable to
NBS or a carefully calibrated vehicle driving through the beam
shortly before the arrest (AND afterward) is usually held to be
sufficent calibration. Unfortuantely, most judges are not aware
of or just don't care about these precedences. K9ALD

Of course a smart lawyer would always ask whether the police radar was
properly licensed... and report to the FCC any usage he suspected was
not covered by a valid license at the time... Do US Hand-held radars require
type-approval for you too? If so, this could be yet another thing to challenge
your local Highway patrol.
When i went on a tour of the dispatchers' office at my local police department,
they had the radio licenses and other things like their public liability
insurance documents, framed on the wall. I did not see a radar license though.

"Accepted" means that you have convinced several judges in court
cases that you are indeed a qualified expert. Once you do that
a couple of times, the judges and the prosecutors usually don't
argue about it. Strangely enough, my status as a registeered
professional engineer in my state carries much more weight with
the judges than my EE degree or FCC license although it has nothing
to do with radar. K9ALD

I use a "bare" D-104 on my Kenwood TS-120, and the amplified version on my KWM-2. I get excellent audio reports on both. Yes, there is an impedance mismatch. Add the standard one transistor amp if you can't get enough audio out. K9ALD

|> -Paul Zaremba (AA9BK)

Well, Paul, I can't explain this particular instance. But, I do know that this is not in general true. The states I know about (watch out, because Illinois is one) say that any police officer with a RADAR certification is assumed accurate when he GUESSES your speed. Actually, there is an accuracy limit. For example, a police officer in GA with a RADAR certification can state in a court that he believes you were going XXX miles per hour. The court will assume that he is accurate to plus/minus 5 mph.

Apparently as part of the certification process, he has to demonstrate ability to do this. So, although he would prefer to use RADAR and have a nice solid case, many states allow the officers to arrest with no timing instruments employed at all. I presume that they choose to do this only in extreme cases just to make it easier on themselves. (If they get you on RADAR, you're probably going to pay your ticket and they don't have to show up at court.)

[from Olli, OH0XX, and Rolf, PY1RO]

ZA1A PRESS RELEASE # 8 (9th Oct. 1991)

The international Amateur Radio Union (IARU) team of operators/instructors has returned safely from Tirana, Albania after a most successful mission. It was not only that some 71,000 contacts were established, but also that twelve Albanian citizens have passed the amateur radio exam and are ready for operating.

The newly founded Albanian Amateur Radio Association will still have many challenges before things are up and running. The organizers of the ZA1A project have agreed to assist in many critical areas. If you or your organization are willing to assist this DXCC counter, you may wish to contact DF5UG, I2MQP, OH2BH, N7NG or JA1BK. They will be happy to provide you with information and facilitate your interest. The names and addresses of the twelve new Albanian amateurs will be made public shortly so that you and they can make friends.

The Albanian administration has forwarded (to the IARU/ARRL) information concerning amateur radio licensing in their country. For the ZA1A project, the PTT and the National Frequency Commission - the highest radiocommunication authority - issued amateur radio license ZA1A for the period ending on 7th of October, 1991. Beginning on the 8th of October, 1991, they will begin to issue additional licenses with the next license going to a French team planning to arrive in Tirana shortly. The administration plans to issue callsigns in the ZA1Z** block to foreign nationals seeking to operate in Albania.

On the 8th of October, 1991, the ARRL DXCC desk reviewed the ZA1A documentation and accredited ZA1A accordingly. The QSL cards are acceptable for DXCC credit immediately. The hard-working NCDXF team is busy entering the QSO data while the QSL card design is ready for the printer. The NCDXF is aiming for the shortest ever turn-around-time in QSLling for any major DXpedition. They expect mailing to begin before the end of October. They also advise two (only) SAE/SASE - one for cards processed normally, and one for problem cards. The QSL address is: NCDXF, P.O. Box 1, Los Altos, CA 94023, USA

The organizers of the ZA1A project would like to extend their most sincere thanks to their many supporters and

friends. They would like especially to credit Mr. Albert Mller, HB9BGN, who coordinated the logistical operations in Zrich and offered his hospitality to all team members enroute Tirana. They would also like to credit Mr. Erkki Heikkinen, OH2BBF, for his diligence in keeping the information flowing out of Tirana.

On behalf of the entire ZA1A team
Martti Laine, OH2BH
Project Coordinator

Appendix I to ZA1A Press Release # 8 (App. II - ARRL letter of approval also included)

Text from the ZA1A QSL-card:

THE FIRST LICENSED AMATEUR RADIO OPERATION FROM ALBANIA

This mountainous Balkan state is bordered by the Adriatic Sea, Yugoslavia, and Greece. It's population of 3 million people is now opening it's hearths and homes after many decades of very strict order. Albania has an interesting history, is rich in natural resources and natural beauty and has an exceptionally warm people that should be welcomed into our international community of nations.

The ZA1A team was given the honor of establishing amateur radio in Albania and training twelve Albanian students to carry that seed further. Albania is no longer a rare country in DX - Albania is now within reach and open for your visit. Indeed, ZA land can easily be the destination on your next itinerary. Contact ZA1A team members or any of the new licensees for details.

The ZA1A project has been a splendid example of international friendship among many individuals and national societies under the patronage of the International Amateur Radio Union (IARU). The assistance of the NCDXF, the Yaesu Corp. and the Kenwood Corp. are also recognized by many of the Deserving throughout the world of amateur radio.

Welcome, Albania, to the family!

The international ZA1A team:
DF5UG, I2MQP, I2KMG, I5FLN, IK0FEW, JA1BK, JA1HQG, W1RU, N7NG, K7JA, W7SW, OH2BH, OH1RY, OH1VR and OH2BAZ.

The Albanian hosting team:
Agim, Artur, Dajlan, Fatma, Fredi, Geni, Ibrahim, Maksim, Toli, Arben, Dali, Gezim, Jovan, Lushi, Mirela, Niko, Sadik, Teo, Ylber and many others.

Subject: 2M PA information
To: info-hams@ucsd.edu

I really do not know how expert you are with VHF construction techniques, so
I will give you a number of sources, and then let you apply them as
you see fit. You may already know this, but VHF construction can be somewhat
of a black art, where one must pay particular attention to lead length,
placement, grounding, etc., much more so than at HF.

One place you may want to go for information is the ARRL handbook, available
from the American Radio Relay League, 225 Main St, Newington, CT 06111. You
should write them and ask how much they want for it. This book is very popular,
and may also be available at a local ham bookstore. It changes each year,
but in the 1987 version, on page 31-47, there was an article on how to
construct a medium-power 144 mhz amplifier, which would take 10W in and put
out 300 or so. It has the flavor of a class C amplifier. There is another
one on page 31-54, that requires 19W to put out 700W, or a full 2KW PEP
amplifier on page 31-59. (The construction details are given in December 73 and
January 74 QST.) These amplifiers all use tube technology, and pretty high
voltages.

The ARRL's Book entitled "FM and Repeaters for the Radio Amateur", at least
the one copyright in 1972, also has a solid state power amp for 2 meters,
starting on page 59. It is designed to operate from a vehicle electrical
system, using about 13.6 volts. It is definitely a class C amplifier. This
was further described by K7QWR in May 72 QST. The output is in the 40W to 50W
range. I had trouble discerning the input power required from the
article, but it is somewhere in the range of 1 to 15 watts.

The ARRL's "The Radio Amateur's VHF Manual", at least the 1972 edition, had at
least the high power VHF amp.

I would suggest you get a more recent edition if you are serious about building
one of these things, so you do not run into a problem of obsolete parts
or parts where the suggested supplier has gone out of business.

If you like kits, you might just try to get in touch with Radiokit. They have lots of kits for various things, although I do not know about VHF stuff. Their address is Radiokit, PO Box 973, Pelham, NH 03076, and phone is (603) 437-2722. I have not done business with them in the past, so I can not endorse them. (The Radiokit info was current as of 4/13/90.)

I hope that you find the above helpful, and thank you for cleaning up the language.

Peter Baldwin

I thought people on this newsgroup might find the following video interesting. If you have TVRO you can pick it up on Oct 20th or you can get a videotape from ARRL. Here's the ARRL press release with the details.
--GaryM

News Release
October 10, 1991

HAM RADIO IN SPACE

A new amateur Radio educational videotape series entitled "Ham Radio in Space" and suitable for classroom use has just been announced. The series contains individual segments which can be used separately or combined according to instructional needs. This tape will interest viewers of all ages who are interested in space. The entire videotape will air on Westar 5, transponder channel 4H on October 20 at 2 to 3 PM Eastern time so that interested schools, cable operators or individuals with TVROs may copy it for their use. Loan copies of VHS videotapes will be available from the Education Activities Department (EAD) of the American Radio Relay League (ARRL), 225 Main Street, Newington, CT 06111, telephone 1 203 666-1541, fax 1 203 665-7531. Inquire of ARRL/EAD for formats other than VHS. ARRL publications sales will also have VHS copies for sale at $10.00 plus $3.00 for shipping and handling.

Segments in the series include: an introduction, "You can Fly," "How Ham Radio Went into Space," "Ham Stations on Earth and in Orbit," "Hams Go to School," and "Ham Radio in the 21st Century."

The series was a cooperative effort by Roy Neal, K6DUE; Bill Pasternak, WA6ITF; Mark Neal; Rosalie White, WA1STO; and Larry D'Anna, WA3KQK, at Professional Video Services in Washington, DC. Funding for this project was provided by ARRL, CQ Communications, ICOM America and Kenwood.

For further information, contact ARRL Educational Activities Assistant Zoe Belliveau at ARRL HQ.

It's kind of fun in it's own weird way like chasing DX on HF. Part of
the challenge is breaking through the pile-ups. On VHF and UHF it's a
little more challenging and requires some finesse occasionally to get a
big enough signal (especially from San Diego).

3645. Re: Blue Angel`s freq`s for Fleet Week

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-10 16:22:18 UTC
From: frankb@hpsad.sad.hp.com
Message-ID: <27890014@hpsad.sad.hp.com>
Source record: 292767

*Does anyone have a list of frequencies for the Blue Angels and any other
*good one's pertaining to Fleet Week this coming weekend. I will be out in
*a small boat with my BC200XLT.
*
*I would be happy if someone could repost any prior info.

Last year at the Willow Run Air Show here in Michigan, the following
frequencies have been said to be active for the Blue Angels.
275.35 - Blue Angels
246.4 - Solo/2-Team
122.92 - Show

The Blue Angels flew at an air show in Colorado Springs this past weekend
(plus practice on the Thursday and Friday before that). A friend of mine
says that he heard them on:
275.35 MHz - diamond formation (Blue Angels 1 through 4)
251.60 MHz - solo planes (Blue Angels 6 and 7)

Other possible frequencies that he was previously given include:
142.00, 143.00, 143.60, and 241.40.

348.60 MHz was used here by ground control on the military side of
the field for parking aircraft before and during the show.

The Blue Angels use THREE frequencies in the air... the two given previously,
and either 302.15 or 307.7 (Usually) -- the third is the ALL aircraft master
channel.

The 142 - 143 channels are supposedly no longer used, reportedly because a
ham tried to TALK to the Angels on those channels with a modified ham HT,
causing the Angels to move to all UHF air to be less jammable.

>> I am looking for frequncies of Aircraft teams like the "Blue Angels",
>Last year at the Willow Run Air Show here in Michigan, the following
>frequencies have been said to be active for the Blue Angels.
>275.35 - Blue Angels
>246.4 - Solo/2-Team
>122.92 - Show

The correct frequencies are:

251.6 -> Diamond Formation
275.35 -> Solo Pilots
302.15 -> Flightline (Whomever is currently performing a
maneuver before the crowd)

Modes on all frequencies are AM. Local tower frequencies will be used for clearence and weather.

If it looks like you are jamming his radar -- that's at least two serious crimes (deliberate interference with legitimate spectrum use; deliberate obstruction of law enforcement), not just a traffic citation -- he can arrest you on reasonable suspicion. He doesn't need proof.

Another non-switching option you might want to consider:

An outfit called Industrial Communications Engineers (ICE) in
Illinois or Indiana, makes a 4 port distribution amplifier that
would seem to be custom designed for you application.

Covers .5 to thirty something MHz, has 4 isolated outputs, and
will let you instantly compare between receivers since they'll
all be "on-line" at the same time.

Costs $35 or so; I have no connection other than a satisfied user
of their transmitting low pass filters.....

I can believe this. I passed all sections in one sitting (and went from
recipricol permit to Extra (not like going from swl to extra))
[re-insert 20dB modesty attenuator here] and the most difficult
part was remembering the band allocations for ALL classes
and modes. Even the 20WPM morse was not difficuilt because the format
of the exam allowed for a large amount of journalising.

While several posters have claimed that these devices work, I don't beleive
they do. Remember that doppler shift radar takes the transmitter output and
uses that as a reference to beat against the returning signal. The resulting
beat frequency is indicative of the speed of the object being measured. Now
X-Band radar operates at 10.525 Ghz. A Gunn diode running in a cavity at this
frequency will almost never be exactly 10.525, it can easily vary by a Mhz or
two. That doesn't matter since its the reference which the return signal beats
against. Now if I take ANOTHER X-band transmitter (Call it a radar calibrator
or whatever you want). It will NOT be operating on exactly the same freq. as
the original radar. Thus, the resulting beat freq. from the return signal will
be far different than the actual return signal. Most units will see only their
original return signal and continue to operate properly. Awhile back, a police
friend of mine and myself conducted a test. He clocked my car as I approached
him with a X-band (10.525 Ghz) modified motion detector transmitting right at
him. It made no difference at all... He was still able to get a good reading.
The secondary signal was discarded as nonsense by the unit.
Now (IMHO) The proper way to do it (And the government has spent a lot of
money with the stealth program doing things like this) is to first receive
the originating radar signal, then using VERY high precision electronics,
EXACTLY match the originating signal, then vary it by the appropriate shift
for the speed you wish to go at. This would cost mucho mucho bucks to do (as
well as being blatantly illegal) and is best left to Governments to play

with! :-)

I too am offended by Mr. Zaremba's language. I have nothing against foul language when it's used sparingly and in the right context. But when it's done in a news group it bothers me. And I tend not to take the author very seriously.

A more carefully worded flame without the foul language will be much more credible to me.

I'm not suggesting censoring. Just letting you know how it effects me and probably others. Continue to use "bad" language at your discretion.

>.....Most experienced
>police officers can estimate a vehicles speed within 1 or 2 mph.

I can definately believe this. The only ticket I ever got with my escort was by a guy who only shot the cars he planned to ticket. None of this giving everybody warning for him. His only regret was that I was down to 64 MPH before his unit locked light came on, so he had to write the ticket for 64 in a 55.

>faster than other traffic on which it reads 65. Or that it's rock-solid
>at 55 even as you change speed while passing.

I remain confused about all of this talk about a calibrator. Everyone I've ever met claims that I can emit some predetermined frequency from a box on my car and the radar gun will magically read 55 MPH regardless of my speed. I have for years contended that one must take the speed of my vehicle into consideration when determining the required frequency, i.e., as my speed varies while emitting the signal, the clocked speed on the radar gun will vary also. I'm NOT saying that I cannot cause the radar to read incorrectly, just that I cannot cause the indicator to give a rock solid reading without modulating the oscillator. Will someone PLEASE explain why the natural laws governing Doppler shift automatically cease to apply if I move the emitting device into an automobile?

>a soap opera.

As the trustee of a local high-level 2 meter repeater, I have never understood how a repeater group can allow blatant obscenity, music, intentional interference, etc. to continue unchallenged on a repeater. (I'm not from LA, but I take it from the postings that this describes the repeater in question.)

For one thing, the trustee is legally responsible (along with the repeater user) for any transmissions the user makes. I know I don't want to put my license on the line for someone else's illegal operation.

Why not just have a control operator turn off the repeater whenever illegal operation occurs? Of course, this means that legitimate users can't use the machine either, but they can't anyway when the chaos is going on. Hopefully, over time, the jammers will realize that they can't have their audience, and will move on to less destructive pursuits. Even if they don't, at least their damage to Amateur Radio would be limited.

What am I missing here?

AL N1AL

P.S. By the way, the difference between repeater and HF jamming
is that you can't "turn off" an HF frequency.

Source record: 292760

Oops... Yesterday when I posted my opinion I got some of it mixed up.
I discovered last night at home that the paddle with the magnets was also
a Vibroplex, not a Bencher. (The Vibroplex I bought is the "deluxe"
[their term, not mine] iambic key with longish metal arms... it looks
a lot like their famous "bug"). Vibroplex makes two completely different
kinds of iambic paddles.

My reasoning was not flawed however. I did and still do prefer the "feel"
of the arms with the greater mass. Your mileage may vary.

Source record: 292745

OK, my $.02.

Although some judges may let officers get away with either radar alone, or the "calibrated eye", I suspect at least some states require visual evidence to back up radar reports. I quote (to the best of my memory) from a ticket I received in Michigan some years ago:
"I visually observed the vehicle to be traveling at the speed of 70 MPH. I then activated the radar and registered a speed of 69 miles an hour. BLAH BLAH BLAH, etc."

But in Georgia, I was in the car when my friend got a ticket, with a marked speed on the ticket, with no radar. The officer was parked on the side with a car he had just stopped, saw us fly by, and told the guy in the other car "Follow me!". We had to wait until the other guy caught up and got written up first. But this was on I95, and I would guess very few of those ever come to court.

PA doesn't allow local police to use radar, only State Police. So the locals use VASCAR instead. In fact, if an out of state ticket comes into the Harrisburg office, and they see "radar" on the ticket, they will not put it on your driving record! There are some advantages to living in a backward state.

To: PSYXSGP
CC: DOWDEN
Subj: Seeking a ham in WA.

Stephen,

Our ELBBO flights start in February. The data is down linked at 13.45 MHz to ground stations at Dunedin, South Pole, Durban and Brazil. There are gaps in this coverage so we will miss some data.

We need another ground station at or near Perth, W.A. Since 13.45 MHz is close to the 20 metre ham band, we are looking for an interested ham with a 20 m antenna (e.g., a steerable cubical quad). We will supply the receiver (Sangean), MSK decoder and logger (onto 5 inch floppies). Included would be a box with switch. In one position the ham's antenna would be switched to our gear and in the other to the ham's. We would only want use of the ham's antenna when he/she is not using it. The floppy disk would last several days and takes a second to change it.

The floppies would be mailed back to us (at our expense, of course).

Another gap in our coverage could be filled by a ham in Stanley (Falkland Is) or far south Argentina. (The ELBBOs will track around the world at around 40 to 50 deg latitude).

Could you put this (or an edited version) on the Oz ham bulletin board if such exists? Alternatively, do you work 20m and so maybe know 20m hams in WA?

Regards,

Dick

3662. IC-2SA battery charging/mobile use

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-10 20:31:24 UTC
From: markju@tekig5.PEN.TEK.COM
Message-ID: <3275@tekig7.MAP.TEK.COM>
Source record: 292763

Help! I just bought a used IC-2SA with the BP-82 battery pack and the BC-74A charger. According to the manual, I can plug a CP-12 (cigarette lighter adapter) into the same socket that the charger plugs into. My question is this: Icom says to "never charge a battery pack that is fully charged" and also "only charge a battery pack that is nearly fully discharged". If this is so, how do I prevent the battery pack from over-charging when I am plugged into the car cigarette lighter for mobile operation? The manual says nothing (that I can find) about unhooking the battery pack during mobile use. What gives?

Thanks net-landers,

In article <TZai09w164w@k5qwb.lonestar.org> lrk@k5qwb.lonestar.org (Mr. Lyn R. Kennedy) writes:
+
+Does this mean that whenever Air Force One keys one of it's kilowatt HF
+transmitters it automatically crashes? I don't think so. AF-1 normally
+flies with at least one HF transmitter and one UHF transmitter
+continuously keyed with others going intermittently. It's now a 747, and
+I don't know where they get all that power, but the fact is, it's
+possible to operate all kinds of transmitters without being a safety
+problem. Some new fighters are 'fly-by-wire' and there could be EMI
+problems with them if not properly designed or repaired.

I believe you may have missed the point. Air Force One has had it's navigational radios checked out and certified for operation while the HF and UHF transmitters are operating. The crew is aware of their operation and have direct control of their use. A random 5 Watt transmitter at random frequencies keyed within the fuselage may cause cause false navigational indications (glide slope, ILS, VOR, Loran, GPS, ADF, MLS to name a few) which in critical phases of flight could endanger the safety of the aircraft.

Saying it is not so or can't be a problem is counter intuitive. Haven't you ever seen TVI? RFI? Denying that they exist does not make it so.

Detection of radar jamming (at least the simple audio modulation
at the doppler rate kind) is very easy to detect simply by listening
to the detected audio available on most sets--even the older ones.
While some officers do not know how to interpret the audio doppler
information, one who happened to pull me over for a traffic check
knew quite well when I inquired of him.

Amen. I have 2 questions for Erik. Do you only subscribe to newsgroups where you know everything? It seems this is probably true since everyone should go to a library and ask a book instead of humans, and when a question is asked, you flame them. I cant imagine asking for help on the local repeater and being flamed for not going to the library.

Hey, why fly to New York, when you can walk?

As quoted from <1991Oct10.042205.12115@ecst.csuchico.edu> by nomad@ecst.csuchico.edu (Michael Larish):

```
+---------------
| In case you didn't realize, one of the major benefits of computers and
| increased communications is that it allows you to learn and gather information
| much easier than it might be without the use of the computer. Yes, college
| students should be able to read and write decently well as well as know the
| basics of research and information gathering. However, what makes going to
| the library any better or worse than asking a supposedly knowledgeable person
| via communication by computer? It is a lot easier to log onto your local
+---------------
```

It's wasted network bandwidth that can be put to better use for the official projects the network was created for. (Internet doesn't exist solely to transmit Usenet news....) And the library's a lot faster than the net for those of us who depend on UUCP links.

```
+---------------
| Yes, there is a problem with our educational system but not all
| college students are idiots or illiterate. I'd appreciate it if you would
| refrain from lumping us all in the same category...
+---------------
```

I never intended to say they were. But it's clearly not only possible but fairly common for someone to get into college without knowing very much about anything.

3667. Re: 10 meter/mobile rigs?

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-10 22:33:31 UTC
From: allbery@NCoast.ORG
Message-ID: <1991Oct10.223331.20690@NCoast.ORG>
Source record: 292637

As quoted from <1991Oct09.214834.4581@sdd.hp.com> by holt@sdd.hp.com (Holt Mebane):
+---------------
| Has anyone had any experience with any of the 10 meter mobile rigs available?
| (Like the Radio Shack, Uniden, ???). I'm interested in getting something for
| HF in the car (with 2 little kids at home, to/from work is about my only time
| to operate!) I enjoy 10 meters (not FM, REAL 10 m), but I'm concerned about the
| quality of these rigs. Are they any good? What about used all-band rigs that
| are small? Any recommendations? It'd be nice to have all-band coverage, plus
| some added power. Any info would be appreciated.
+---------------

I have the Radio Shack HTX-100. It's an okay rig for SSB work --- most of the
DX contacts I have logged were worked with it --- but R/S radios usually
aren't the best.

There is no such thing as a "small" all-band rig; the Icom 735 is about as
small as it gets. (Also the Yaesu 747GX, and Kenwood has a compact model.)
The 735 is definitely a nice rig --- I have one in my shack --- but a bit
large unless your transport is a van or you aren't interested in carrying
passengers. :-)

> this describes the repeater in question.)

This would describe either 147.435 or 146.61.

This is a complex issue to say the least. Over the years very few people had control over the repeater (as in wielding the on/off button) and I know that with Dave WA6KOS (one of the trustees and owner) that he tried to avoid turning off the repeater at all costs. Dave used to say to the MWRA (Mount Wilson Repeater Association) that the repeater was what those people made it to be. And to a certain point that was true. People will do their own thing and in their own way and many people tried to make the repeater a nice place but the "crazies" were into making it into their vision if I may call it that.

435 was always privately owned (I can't speak for the last three years) and was never under the control of the MWRA. The MWRA was a support organization and that was it.

>
> For one thing, the trustee is legally responsible (along with
> the repeater user) for any transmissions the user makes. I know
> I don't want to put my license on the line for someone else's
> illegal operation.

That's true. But IMHO that ruling is wrong. You can't control everything. I don't wish to digress or open a bag of worms but you don't see the FCC going after a phone company because one of their subscribers made an obscene phone call. Dave as well as lot of other hams on the repeater felt that making the licensee responsible was wrong. He even made a trip to Washington to talk to the FCC about this topic. Dave was willing and obviously did put his license on the line.

>
> Why not just have a control operator turn off the repeater whenever

> realize that they can't have their audience, and will move on to
> less destructive pursuits. Even if they don't, at least their
> damage to Amateur Radio would be limited.

This does work in most cases (in my experience) but you have to
understand the type of people that were disrupting 435 in the late
70's. These people openly jammed the repeater. They did not care if
people knew who they were.

And when the repeater was turned off and came back on after a cooling
off period they would do there darndest to get it turned off right
away. Legal issues aside (and yes it's past history) what do you do in
a case like that? Do you give in and give these lids the pleasure of
turning off the repeater? It's not an easy question to answer.

After the FCC revoked the licenses of these hard-core lids there were a
couple of years in which the repeater and the MWRA went through a
rebirth. When a jammer was found a phone call or eyeball QSO was
sufficient to show the individual the error of his or her ways. This
new generation of lid was scared of being identified.

>
> P.S. By the way, the difference between repeater and HF jamming
> is that you can't "turn off" an HF frequency.

Why should there be any difference?

3670. HELP:need Army Gen. Parts...

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 01:37:23 UTC
From: pazar@hpnmdla.sr.hp.com
Message-ID: <14570183@hpnmdla.sr.hp.com>
Source record: 292631

Gents,
I'm looking for a source of parts for an old (1960 vintage) Army surplus gas powered generator set. More specifically, I'm in need of a new set of rods for the engine, and new brushes for the generator. The model number is 1536S-2A016-1. The engine is a Continental 2 cylender, 4 cycle, overhead valve, aircooled beastie. The generator is made by Winpower, and put out 120VAC, 60 Hz at 1.5 KVA. I've already tried all local sources with no luck. Hopefully someone in MARS will have access to spares!

Thanks,
Steve Pazar WA4DUT/6

This is a little off the subject of RADAR, but, it seems to me that I was able to listen in on cellular telephone communications with my 2m handheld. This was on a frequency of roughly 151 or 152 MHz. Just to dismiss this as a freak occurrance, I was able to do this a few times. My question is then, are all cellular communications in the high range of 800 MHz or so?

3672. Regulator Information Summaries

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 03:41:00 UTC
From: JPB7946%TNTECH.BITNET@cunyvm.cuny.edu
Message-ID: <01GBLIPZ7IGGECXGYE@TNTECH.BITNET>
Source record: 292629

Someone asked for a summary of my findings concerning voltage regulators, so here it is. Although I had deleted some of the duplicate mailings, I kept what I felt was a good representation of all opinions offered. More over, I only kept those designs which I FULLY understood ... being a novice builder, most things confused me. Anyway, I hope someone out there can use this info.

Thanks once again to the over 50 people who sent information.

73,
Jon / N4VRN

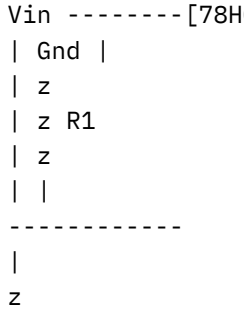
" " LT1084CK Adjustable, 5amp

National Semi. LM396K Adjustable, 10amps
" " LM338K Adjustable, 5amps
==========
I would assume that the 1.5 amp regulators you refer to are 7812 3pin IC regulators. An easy solution is to buy a 78H05 this is a 3pin regulator however it will carry 5amps (with a heatsink) all day long. The problem is that this is a 5v regulator, however with the addition of 2 resistors you can set the voltage to any level you wish (the calculation of these values come on the data sheet with the regulator).

A second alternative (an cheaper too), it to use a 2n2955 (or TIP2955) transistor in combination with the 7812 to boost its current capacity. This configuration will easily handle 5amp (in fact a 2n2955 will carry upto 15amp.

The circuit for using the resistors to boost the voltage of a 78H05 is



```
z R2
z
|
Gnd --------------------------
```

Where R1 = Vr (note Vr is the voltage regulator voltage, here it is 5)
--
0.02

and R2 = Vb (The voltage to boost it by, here [13.6-5] = 8.6)
--
0.025

So there you have it, note the 78H05 is a TO-3 case not a TO-220 case
like the other IC regulators of the 78xx family
==========
How 'bout the LM338K 5 Amp Adjustable Positive Voltage Regulator.
Made by National (and others). One source is:

Digi-Key
701 Brooks Avenue South
P.O. Box 677
Thief River Falls, MN 56701-0677
1-800-344-4539

Listed price: $7.38. These are basicly the same as the very common
LM317 1.5 amp regulator.
==========
>>> BTW you can not use regulators in parallel without adding some load
>>> balancing resistors (as each one has a different voltage), and so one
>>> will take all the load and melt down. (thermal runaway)

3673. HT Information

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 03:55:00 UTC

Message-ID: <01GBLJ7XMWIOECXGYE@TNTECH.BITNET>
Source record: 292628

Now that my trusty old HT has passed hands to another beginner Ham, I am now ready to start looking for a new and improved rig to replace it. I have looked at several HTs that I like, but I would like to find people who have "test driven" these models before I make a selection. I am also interested to hear comments concerning dual band HTs ... the two people I know that have them are not satisfied ... they say the receivers are too sensitive. Anybody else had any good/bad luck with dual banders? The two duals mentioned were Yaesu FT-470s.

If you have comments concerning the following radios, PLEASE let me know what you think:
Yaesu FT-411E
Yaesu FT-470
Alinco DJ-120T
Alinco DJ-160T
Alinco DJ-560T

** End of Report **

3677. Where's Paul Schleck?

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 11:16:06 UTC
From: dls@genrad.com
Message-ID: <43986@genrad.UUCP>
Source record: 292648

Sorry to post this, but it seems I can no longer get thru on email.
I've tried emailing to Paul in the past few days and it continually bounces.
Thinking it was just GenRad (it has problems all the time with email), I
sent my mail to a friend and HE tried sending it....same result. Paul
seems to have disappeared from the network. His callsign is KD3FU, email
WAS acm005@zeus.unomaha.edu, and he maintained the Elmer list. Anyone
got any news on him? I'd appreciate email if you do.

Thanks. And now back to the show.

3678. How to get NEW QSL information

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 11:23:33 UTC
From: dls@genrad.com
Message-ID: <43987@genrad.UUCP>
Source record: 292646

I'm curious if there is a way to get new US Callsign info which is not yet in the latest Callbook. I have a 1991 Callbook Supplement, so I do have the latest information available. However, the Callbook is generally about six months out of date.

I have need of some NEWly licensed callsigns, along with the ham's name and address. WHY? Because I have a WHOLE bunch of QSL cards I'd like to get rid of and they belong to some of these new hams. (I'm a sorter for the QSL bureau). Specifically, I'm looking for calls KA1YLL thru KA1YZZ. More specifically, I have about 25 callsigns in this group that currently have QSL cards.

Does anyone know a way of accessing this information? If someone out there has access to it, can they send me "how" or send me the data itself?

Thanks for any available information.

Proving obstruction requires proof of intent and that's hard if you have a competent attorney. Considering that an AM modulated signal in the Amateur band 10.0-10.5 Ghz will certainly bollix the police radar on 10.525 Ghz due to the diode frontend and poor in band filtering in police radars, running an "experimental collision avoidance" system on a legal ham frequency that just *happens* to cause a problem with the broad police radar gun will make proving intent to jam nearly impossible. It helps even more if everything is neatly labeled and a notebook is being kept. The GA State Patrol has examined my experimental setup, but no ticket and no complaints have been filed. I also don't drive like a maniac, just keep with the flow of traffic which is usually about 15 mph over the posted limit. If you stand out from other traffic, they will ignore the radar and revert to clocking you the old fashioned way. Then it's your word against his, and you will lose. Here in the South, radar is used mostly for revenue enhancement and they won't go to a lot of trouble to make a ticket stick. Reckless driving is another matter and they are very serious about that, as they should be.

3680. Antenna masts--PVC or wood?

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 14:07:53 UTC
From: pgh@cs.brown.edu
Message-ID: <PGH.91Oct11100753@pompeii.cs.brown.edu>
Source record: 292638

I'm about to put up two 30 or 40 foot antenna masts. I've seen PVC tubing suggested for the purpose -- it's cheap, light and flexible. Wood is more traditional, a little more expensive, maybe more work (painting, etc.). I've heard that PVC tubing gets brittle in sunlight. Does anyone have any experiences either way? If I use PVC tubing, what diameter should I go for? If I go for wood, what size wood (I would guess 16 foot 2x4s)?

>When i went on a tour of the dispatchers' office at my local police department,
>they had the radio licenses and other things like their public liability
>insurance documents, framed on the wall. I did not see a radar license though.

The GA State Patrol was gigged for this a few years ago. While they had a license to run radar, somewhere in somebody's filing cabinet at the State capitol, they didn't have the required transmitter ID cards attached to the individual radar units. They made the mistake of stopping a certain FCC field engineer one day and lost all radar priviledges for 6 months. In another case, the DeKalb county police installed old radar units on highway overpasses in order to confuse people with radar detectors. They were gigged for false and misleading signals and had to take them down.

In another federal/local conflict, the Gwinnett county police were caught removing emission controls from their cars and fined heavily and required to reinstall the equipment by a certain local EPA official. Seems they weren't having much luck catching speeders with their smog equipped cars and decided to hotrod them. One of the hotrods chased down said EPA official. It's not nice to fool with Uncle Fed.

>him with a X-band (10.525 Ghz) modified motion detector transmitting right at
>him. It made no difference at all... He was still able to get a good reading.
>The secondary signal was discarded as nonsense by the unit.

What you missed Wayne is that police radars have a diode detector frontend
and any AM modulated signal that will pass the very broad frontend RF
filtering will be rectified by the diode and the resulting audio signal
becomes *indistinquishable* from the real doppler beat (also an audio
note) *except* that it will be much stronger.

WANTED: Enthusiastic people with an interest in Communications, Public Service, Technology, and having an enjoyable hobby to attend an:

AMATEUR RADIO LICENSE CLASS

No Technical Background Needed!

The Wellesley Amateur Radio Society is holding Amateur Radio Licensing Classes this Fall. This course is for beginners who wish to learn about Amateur Radio and also for those who wish to get back into the hobby.

Classes start on October 14 , will run for 8 or 10 weeks and prepare all students for passing the FCC Novice or Technician Amateur Radio License Exam. An Exam session will be scheduled newar the end of the course. (Saturday, 30 Nov 91)

The classes will be held at 7:00 P.M. each Monday evening at the Wellesley Fire Department Headquarters, 457 Worcester Rd, Wellesley (on Route 9, just west of the Rt. 16 underpass).

The course material will cover all the topics needed to pass the Novice or Technician Exam. The study of Morse Code is now optional. An additional set of classes will be available for those who wish to learn the International Morse Code.

Licensed amateurs will be instructing and sharing their experience and knowledge for all who are interested. The is NO FEE for the course.

The "Textbook" for the class is "NOW YOU'RE TALKING" published by the ARRL (American Radio Relay League). This book is availabe at area Ham equipment and Electronics stores. A list of stores that carry the book will be available at the first class.

Come, join the fun of Amateur Radio!

For more information, please call Roger Tobin at (508) 691-4662.

The classroom is on the 2nd floor, reached by a staircase at the back entrance.

Also, please feel free to attend the regularly scheduled meetings of the WARS at the Wellesley Fire Department Headquarters, 457 Worcester Road, on Route 9 Westbound at the corner of Routes 9 and 16 in Wellesley every First and Third Thursday at 7:30 P.M. Plenty of parking in the rear, and interesting activities inside!

3684. Regulators and battery chargers

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 15:17:45 UTC

>dismiss this as a freak occurrance, I was able to do this a few times.
>My question is then, are all cellular communications in the high range
>of 800 MHz or so?
>...KA1MOD

What you were probably hearing was General Mobile Telephone. This system uses frequencies in the 150 Mhz band. Before cellular, GMT was all there was from the Bell companies to mobile users. It remains heavily loaded with users who have large investments in the mobile radios required. As cellular coverage expands, this service will likely decline.

I have the FT-470 and like it very much. Like most dual banders, or even single banders with extended receive capability, it suffers from some intermod in high signal areas. But those hot spots are likely limited in scope and if your house or workplace isn't directly in one, you won't have a problem.

The FT-470 is a mid-size HT with controls that are big enough for ordinary humans to work. The control logic and layout is superb and very natural to operate. The display is excellent. There are a multitude of accessories available for the radio. Speaker mikes, headsets, and the like will interchange with Icom accessories. Batteries are reasonably priced and there are third party packs available. Yaesu has come out with a new rapid charger that won't cook your batteries like the old one did. It's the NC-42, highly recomended. The PA-6 accessory fits between the HT and the battery and allows you to run the radio off 13.8 volts while at the same time properly charging the attached battery, also highly recomended. There are a huge range of battery packs available ranging from a tiny 200 mah pack to a big 1200 mah pack. There is a simple keyboard keystroke mod that allows receive from 100-999 Mhz, though usable sensitivity is limited to 110-174 and 300-500 Mhz. The stock dualband duck is better than most, though I recomend that you get either the Larsen or Comet replacement. The radio has dual band simultaneous receive with dual display readouts. It will work crossband duplex and can even be used without modification as a crossband repeater, though on the low power range only. Power out is either 2 or 5 watts depending on which battery pack is connected. The case is strong and durable, though the LCD window scratches fairly easily. The radio comes stock with CTCSS encoder. I don't believe there is a easier to use dual band HT on the market. The only HT with better RF specs is the IC32 which is a fullsize brick HT with a complex user interface. Pricing of the FT-470 is fairly aggressive as well with the radio often available for well under $400.

>laws governing Doppler shift automatically cease to apply if I move
>the emitting device into an automobile?

They don't, you must AM modulate the signal with a tone corresponding
to the doppler for the speed you want the radar to indicate. Being a
DC receiver with a diode frontend, the simpleminded radar will lock
on to the strongest tone it hears, yours, so the reflected signal is
totally ignored and any doppler on your signal is meaningless because
the receiver has no coherent source to reference it to.

I'm here. Don't know about unomaha.edu, except that they have these little
network barfs from time to time. I just posted my Elmers list a few weeks
ago, and it went out OK.

Please advise about the FAQ lists.

If my primary address doesn't work, try ps67@umail.umd.edu or
ba271@cleveland.freenet.edu.

We now return you to your regular flame-war, already in progress...

As quoted from <1991Oct10.143256.11678@eedsp.gatech.edu> by tucker@fisher.eedsp.gatech.edu (Jeff Tucker):

```
+---------------
| can state in a court that he believes you were going XXX miles per hour.
| The court will assume that he is accurate to plus/minus 5 mph.
| Apparently as part of the certification process, he has to demonstrate
| ability to do this. So, although he would prefer to use RADAR and have
| a nice solid case, many states allow the officers to arrest with no timing
| instruments employed at all. I presume that they choose to do this only
+---------------
```

It's possible that this was also intended to avoid embarrassment: if radar shows a car going at a very different speed from the officer's estimate, chances are the radar picked up something else.

Conductive EMI sprays are distributed by:

GC Electronics
400 S Wyman St
Rockford IL 61101
(815) 968-9661

GC is usally sold by the general-line electronics distributors that sell
to the electronics-service shops. Consult Yellow Pages, your local TV
repair shop or contact GC for the nearest distributor.

Ask about catalog No. 10-4807 12 oz. EMI-RFI Shield spray. GC also makes
silver or nickel conductive paint, catalog numbers 22-201, 22-246, 22-202.

Info from GC catalog, ARRL Laboratory files.

Ed Hare, KA1CV | ehare%arrlhq.UUCP@uhasun.hartford.edu

3691. Amateur Radio FAQ - Part 1 of 4

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 16:35:35 UTC
From: dls@genrad.com
Message-ID: <43993@genrad.UUCP>
Source record: 292590

I was informed that these never made it to the net at wide, even though I
posted them on October 1, so here they are again. Cheers! Diana

| 1-Oct-91 10:00 dls see changebars (|)
The following is a monthly posting of frequently asked questions for
Amateur Radio. Due to the increasing size of this list, I've broken it into
4 Parts (and will break it further if necessary) to keep each Part under
10K bytes.
Part 1 - Beginning Amateur Radio questions
Part 2 - "Where can I find ..." computer questions
Part 3 - Amateur Radio Organizations and Publications
Part 4 - Common Advanced and Technical questions
If you have any questions you think should be added, please email to me at
dls@genrad.com.
This FAQ should ONLY be reposted once a month. If someone asks a question
that is answered by this FAQ, I suggest emailing to that person, or,
alternately, post only the section that answers the question, NOT the entire
FAQ posting. Read news.announce.newusers for proper net etiquette.
This FAQ is available via anonymous FTP from ftp.cs.buffalo.edu.

FREQUENTLY ASKED QUESTIONS
Part 1 - Beginning Amateur Radio questions

Table of Contents:
** What is Amateur Radio?
** Who can become a ham in the United States?
** OK, so how do I become a ham in the United States?
** Where can I locate information and books on Amateur Radio?
** How much does it cost?
** Where can I take the tests?
** What are the tests like?
** What can I do with a ham radio license?
** What can't I do with an Amateur Radio license?
** I'm interested, who will help me?
** Should I build my own equipment?
** Should I build my own antenna?
** Do I need a huge antenna and tower like my neighbor?
** Where do I buy equipment?
** I've only got one 'meter' on the front of my radio - does this mean
it's a 'one meter' radio? (Wow - some guys have 80 of 'em??? :-)
** Where can I get ham radio software for my computer?

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service
whose primary aim is public service and communication between

private persons. Amateur Radio operators are commonly called hams. It's great fun to talk to someone in Japan on the radio! Here's one ham's description of Amateur Radio: "Climbing towers, roofs, trees, or any other fixed object to hang antennas. Restoring ancient equipment to operation. Playing with glitzy new equipment. Blowing up finals. Cutting holes in your (or your buddie's) car. Building your own stuff. Wiping out your neighbor's TV and then having to explain and fix it. The joy and magic of communicating with someone half way around the world with a few bits of glass and wire."

** Who can become a ham in the United States?
Anyone who is not a representative of a foreign government can be an Amateur Radio operator in the USA. There are tests that you must pass to get a license, however the tests are not insurmountable. There are 7-year-old hams and 80-year-old hams. There are many handicapped hams who get great enjoyment out of Amateur Radio.

** OK, so how do I become a ham in the United States?
There are now two entry-level class licenses in Amateur Radio. A Novice license requires passing a 30-question written test and a Morse code test given at 5 words per minute. A Technician license requires passing the 30-question written Novice test and a 25-question written Technician test, but no Morse code test. See local radio clubs or radio stores in your area for more information. Note that you can get a higher class license instead, simply by passing the required tests.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications. Be assured that once you get a callsign, the mail order ham radio companies will find you :-).
For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a Novice License manual, a Technician License manual, and an FCC Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

** How much does it cost?
To take the Novice tests, it's free. To take the Technician or higher class tests, there is a small charge (around $5 currently) to cover copying costs and running the testing sessions. The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests can be given by any two qualified hams of General class license or above. The Technician tests and all higher class license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee ($5.25 for 1991); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some elctronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals back to people on the Earth.
* Experiment with Amateur TV (SSTV) or send still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any kind over ham radio. Interference to other hams or services, as well as obscene, profane or indecent language is not tolerated and is illegal. Music and broadcasting are not allowed on ham radio. Some personal conversations may not be appropriate to Amateur Radio. Do you really want the whole world to hear about Aunt Mabel's hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers) in your local area. Look around and ask local hams. Search out local radio clubs. As well, some people have volunteered to be an Elmer over the Usenet. Paul has volunteered to maintain that list. If anyone wants to be an Elmer, or needs an Elmer, email him:

Paul W. Schleck, KD3FU, acmnews@zeus.unomaha.edu

** Should I build my own equipment?
"Homebrewing" is a fun and educational part of ham radio. It is a thrill to build your own transmitter and put it on the air. However, building your own receiver can be quite complicated; if you don't have electronics experience, you may want to buy a receiver instead. Most homebrew transmitters are QRP (transmit very low power). That's fine for an experienced ham with a very good antenna, but a Novice ham will just get frustrated. Your first rig, therefore should NOT be a home-brew.

** Should I build my own antenna?
Most hams build their own antennas for base station use and buy antennas for mobile (car) use. Most beginner ham books describe how to build different types of antennas. Order of difficulty, from easiest to more difficult, for some common antennas are: wire dipole, Zepp, Yagi, Quad.

** Do I need a huge antenna and tower like my neighbor?
No! Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

** Where do I buy equipment?
If you can afford new rigs, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

** I've only got one 'meter' on the front of my radio - does this mean it's a 'one meter' radio? (Wow - some guys have 80 of 'em??? :-)
Meter refers to the wavelength of the signal at which you are transmitting. There is a inverse relationship between the frequency (specified in kilohertz or megahertz) and the wavelength (specified in meters or centimeters).

** Where can I get ham radio software for my computer?
For Atari computers, contact:
John Adams, KC5FW
17106 Happy Hollow
San Antonio, TX 78232
"or tune into the weekly net Sundays 1600 UTC on 14.325 MHz"
(I'll include other computers when someone sends me info on them)

3692. Amateur Radio FAQs - Part 2 of 4

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 16:36:24 UTC
From: dls@genrad.com
Message-ID: <43994@genrad.UUCP>
Source record: 292592

```
| 1-Oct-91 10:01 dls see changebars (|)
The following is a monthly posting of frequently asked questions for
Amateur Radio. Due to the increasing size of this list, I've broken it into
4 Parts (and will break it further if necessary) to keep each Part under
10K bytes.
Part 1 - Beginning Amateur Radio questions
Part 2 - "Where can I find ..." computer questions
Part 3 - Amateur Radio Organizations and Publications
Part 4 - Common Advanced and Technical questions
If you have any questions you think should be added, please email to me at
dls@genrad.com.
This FAQ should ONLY be reposted once a month. If someone asks a question
that is answered by this FAQ, I suggest emailing to that person, or,
alternately, post only the section that answers the question, NOT the entire
FAQ posting. Read news.announce.newusers for proper net etiquette.
This FAQ is available via anonymous FTP from ftp.cs.buffalo.edu.

FREQUENTLY ASKED QUESTIONS
Part 2 - "Where can I find ..." computer questions

Table of Contents:
|** I don't have a news server at my site, how can I subscribe to the
rec.radio.amateur groups?
** I can read news at my site, but I don't have posting privileges. How
can I post?
** I don't have FTP capability at my site. Can I get files via email?
** Where can I find Anonymous File Transfer Protocal (FTP) sites that
have ham-related files?
** I'm having trouble using FTP....HELP!
|** Are there any Telephone BBS's which have ham related files?
** Are there Dialup News services or BBSs for Amateur Radio?
** Are there any on-line callbooks and geographical name servers?
** Where can I find modifications for my radio to extend its capabilities?
------------------------------------------------------------------------------
** I don't have a news server at my site, how can I subscribe to the
** rec.radio.amateur groups?
To subscribe to rec.radio.amateur.misc, send email to:

Info-Hams-Request@ucsd.edu

In the body of the message, write:

subscribe Info-Hams

Similarly, to subscribe to rec.radio.amateur.packet, send email to
Packet-Radio-Request@ucsd.edu, message is "subscribe Packet-Radio",
```

and to subscribe to rec.radio.amateur.policy, send email to
Ham-Policy-Request@ucsd.edu, message is "subscribe Ham-Policy", and
to subscribe to rec.radio.shortwave, send email to
listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)".
To unsubscribe, follow directions above, changing the command word
"subscribe" to "unsubscribe". Help is available by using the command
word "help". Note that command words MUST be the first word on each
line of the message.

| Another mailing list of interest is antique-radios. To subscribe,
| contact antique-radio-request@swbatl.sbc.com (Tom Adams). This mailing
| list is for discussions on antique radio, television and vintage
| electronics.

** I can read news at my site, but I don't have posting privileges. How
** can I post?
You can post to rec.radio.amateur.{misc,packet,policy}
by sending your posting email to Info-Hams, Packet-Radio, or
Ham-Policy, all at ucsd.edu. To post to other newsgroups, send the
posting email to (groupname)@ucbvax.berkeley.edu and for the
groupname, replace periods with dashes.
For example, to post to sci.space, you would send your posting to
sci-space@ucbvax.berkeley.edu.
All of the Amateur radio newgroups are archived on ucsd.edu under
subdirectory mailarchives/{Ham-Policy,Info-Hams,Packet-Radio}.

** I don't have FTP capability at my site. Can I get files via email?
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for an;ything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. Remember, though, that each request to the BITFTP
server may take several hours (or longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,

HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example
of a request:
reply your_name@your_site
connect uxc.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/Tech.v3.3.sit.hqx.Z
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

** Where can I find Anonymous File Transfer Protocol (FTP) sites that have
ham-related files?
There is a fairly definitive list of anonymous FTP sites available
from pilot.njin.net under subdirectory /pub/ftp-list in file ftp.list.
You can also have the latest copy (published monthly) via mailing
list by emailing to odin@pilot.njin.net, subject "listserv-request",
body of message "send help". Revision info for the ftp list should
be send to odin@pilot.njin.net.

General files for any computer and informational archive:
ftp.cs.buffalo.edu (submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info and
the KA2UGQ worldwide BBS list on ~pub/ham-radio/phone_bbs_list
wsmr-simtel20.army.mil (submissions to this ftp site should be made
to w8sdz@wsmr-simtel20.army.mil) or wuarchive.wustl.edu -
The wuarchive site is also known as the "Simtel Mirror" as it
contains directories that "mirror" the Simtel directories.
These sites contain ham radio mods and ham radio software. A
wide assortment of files covering many topics can be obtained
from the Simtel archives. If you cannot directly FTP from
wsmr-simtel20, there is a mail server that can help. Send
mail with the text "help" to listserv@vm.ecs.rpi.edu.
quiche.cs.mcgill.ca (comments to archie-l@cs.mcgill.ca) - contains
ham related software on /hamradio, including the FAQs, Elmer
lists and geoclk (try the command 'prog geoclk' to find all
files whose name contains "geoclk"). Log on as "archie".
The "archie" server is also available to Australia (ONLY)
thru deakin.os.au and to Europe (ONLY) thru nic.funet.fi.
archive.cs.ruu.nl, sol.cs.ruu.nl, freja.diku.dk -
contains the FAQs for rec.radio.amateur (may not be current)
These sites are in Denmark and the Netherlands and are

intended to be accessed from Europe only.
ftp uxc.cso.uiuc.edu, log in as "anonymous", password is your email address, cd pub/ham-radio - This contains the HyperCard Hamstacks written by Diana Syriac as well as ASCII readable ham radio question pools
apple.com, cd pub/ham-radio - Ham software and information, especially MacIntosh software

Amiga computers:
ab20.larc.nasa.gov, wolfen.cc.uow.edu.au - ham radio files

If you are having trouble connecting to the above FTP sites, read the telnet/FTP troubleshooting hints below or check with your local system administrator.

** I'm having trouble using FTP....HELP!
The unfortunate situation here is that Netnews is far more prevalent than direct Internet hookups, accurate name servers, smart mailers and routers, and of course, telnet and FTP client services. What this means is that your trouble may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If this is the case, then you have no direct connection to the Internet and thus cannot use real-time interactive services like FTP and telnet.
* If you are at a college or university, your host (ie, the computer you are logged onto) may be on the Bitnet network, which has an email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host have telnet and/or FTP client programs? (ie, if you type "ftp" or "telnet" at your command prompt, do you get anything?) Many hosts, particularly IBM mainframes, do not support these services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to misconfigured connections and inaccurate host tables/name servers (*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar error, try telnetting via the IP number, a set of four 1-3-digit numbers separated by periods (eg, 137.48.1.1). The exact IP number for the site can be obtained via the nslookup utility, if your computer supports it....or check the FAQs. Your host may not recognize the "fully-qualified domain name" (like marvin.cs.buffalo.edu), but it should ALWAYS recognize an IP number.
* In the case of telnetting to a non-default port (as in the case with the callbook servers), if telnet <host> <port#> doesn't work, but you can telnet tot the default login port (ie, no qualifiers), then the manner at which the port qualifier is entered may be system dependent.
* Syntax for telnetting from different operating systems differ.

Some common cammand syntaxes are: (angle brackets are for
readability, do not type these in literally)

Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* If all else fails, ASK your system administrator or check system
documentation.

** Are there any Telephone BBS's which have ham related files?
WB3FFV has one, phones are 301-625-0817 or 301-625-9482 or
301-625-9663. Data settings are 8 bits, NO parity, 1 stop bit.
Login is bbs, no password.
This BBS is also available via UUCP, login is uucpanon, no password.
For a listing of available archived, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings
are 8 bits, NO parity, 1 stop bit.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by
volunteer hams and provide bulletins of specific interest to amateurs,
hence they are perfectly legal to rebroadcast on ham bands according
to FCC Regulation 97.111B(6). To lessen the load on the dialup lines,
consider getting your local repeater operator to rebroadcast it, or
tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly,
KC9RP, located in Illinois. The news is typically updated 8am CST
Fridays. Phone numbers are 1-708-299-INFO (299-4636) and
1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations
for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm
Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
Los Angeles 1-805-296-2407
Los Angles 1-213-462-0008

| There is a comprehensive worldwide phone BBS list put together by
| KA2UGQ, available from Simtel20, the Simtel Mirror on Wuarchive,
| and the Supplemental Archives at ftp.cs.buffalo.edu.

** Are there any on-line callbooks and geographical name servers?
If you are at an Internet site you can connect using telnet to one
of the two primary servers:

callsign.cs.buffalo.edu (currently 128.205.32.4)
ham.njit.edu (currently 128.235.1.10) (alias plan9.njit.edu)

There is also a general geographical name server at:

martini.eecs.umich.edu (currently 141.212.100.9)

The callbook servers sit on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.EDU 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:

```
help
lookup kc1sp wn4bbj
lookup n0fzd
quit
```

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns, separated by spaces. For Canadian calls, use the callserver at REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an OS interface to the MBL packet BBS using the Buckmaster CD-ROM callsign database.

The REQQTH address is for the AX.25 radio-linked amateur packet network, *NOT* the Internet. If you attempt to send Internet mail to this address, and use the old .NA suffix instead of the new .NOAM suffix, it will get routed to Nimibia (Internet suffix .na) which is currently paying a lot of money for misdirected ham mail. Help maintain a positive example for amateur radio and please do not attempt this!

** Where can I find modifications for my radio to extend its capabilities?
There are two ftp servers that has this data:
wsmr-simtel20.army.mil or wuarchive.wustl.edu (BITNET ONLY)
Another FTP site to try is 129.100.22.100.

There is a new server at pcserver@novell.business.uwo.ca. In the body of the email, send the command HELP.

There is a packet radio Mods Server. To get the directories, send a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warrantee and that these mods are NOT guaranteed to work.

3693. Amateur Radio FAQs - Part 3 of 4

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 16:37:05 UTC
From: dls@genrad.com
Message-ID: <43995@genrad.UUCP>
Source record: 292593

```
| 1-Oct-91 10:02 dls see changebars (|)
The following is a monthly posting of frequently asked questions for
Amateur Radio. Due to the increasing size of this list, I've broken it into
4 Parts (and will break it further if necessary) to keep each Part under
10K bytes.
Part 1 - Beginning Amateur Radio questions
Part 2 - "Where can I find ..." computer questions
Part 3 - Amateur Radio Organizations and Publications
Part 4 - Common Advanced and Technical questions
If you have any questions you think should be added, please email to me at
dls@genrad.com.
This FAQ should ONLY be reposted once a month. If someone asks a question
that is answered by this FAQ, I suggest emailing to that person, or,
alternately, post only the section that answers the question, NOT the entire
FAQ posting. Read news.announce.newusers for proper net etiquette.
This FAQ is available via anonymous FTP from ftp.cs.buffalo.edu.

FREQUENTLY ASKED QUESTIONS
Part 3 - Amateur Radio Organizations and Publications

Table of Contents:
** Where can I find VE sessions in my local area?
** How do I use the incoming and outgoing QSL bureau?
** Are there any news groups for CAP?
** What's the name of the QRP club that issues QRP numbers?
|** Can I send ARRL or W5YI electronic mail?
** What magazines are available for Ham Radio?
** How do I join MARS?
** How do I join RACES?
** What organizations are available to help handicapped hams?
** Is there any information on antique radios?
** I am looking for a specific ham, can anyone help me find him?
** Is there an on-line copy of the FCC Part 97, or FCC Amateur Radio
allocations and question pools?
** Can I post my neat new ham related program on rec.radio.amateur.misc?
------------------------------------------------------------------------------
** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more
often, they are announced by local radio bulletin boards. The
local packet BBS will most likely have a monthly updated schedule
for VE sessions. ARRL or W5YI can generally be called and asked for
local VE sessions as well. Don't forget that you will need the
following when you go in for an upgrade: a copy of your current
Amateur license; your original Amateur license; any CSCEs (duplicate
not required), if applicable and less than a year old; a picture ID,
```

preferably a driver's license, passport or visa; and the VE test
fee (approximately $5 right now).

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In
general, you send a bundle of foreign (not States!) QSL cards to
the outgoing bureau in Newington, Connecticut, along with a label
off of your QST magazine (which shows ARRL membership), along with
$2 per pound of cards (approximately 150 cards) or $1 for 10 cards
or less.

To use the incoming QSL bureau, you do NOT have to be a member of
ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7
or 6x9, no bigger, no smaller) with one ounce of postage attached
and with your callsign in 3/4" letters in top left hand corner where
the return address label would go. If you expect a large quantity
of foreign QSL cards, attach extra money or postage with a paper
clip. Send the envelopes to the QSL bureau for your callsign area.
If your callsign is xx3xxx/5, you would send it to the 3rd call
area, NOT the 5th call area. Addresses for QSL bureaus are listed
in QST; if you don't have access to a QST magazine, ask another
ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau,
not considering foreign QSL bureaus, is about 3 months. Foreign QSL
bureaus and hams can be as fast as 2 months or as slow as TEN YEARS,
while average is about 6-12 months.

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,
rec.aviation is appropriate for CAP aviation discussions and for
CAP radio information, these rec.radio.amateur.* groups are available.
In addition, there is a mail digest just for CAP. Subscribe by
emailing to capital-request@cps.udayton.edu. Submit articles by
emailing to capital@cps.udayton.edu. CAP related files are also
stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK,
10923 Carters Oak Way, Burke, VA 22015.

|** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net, using the
address username%arrlhq.UUCP@uhasun.hartford.edu, replace username
as shown below:
Jon Bloom, KE3Z, Laboratory Supervisor jbloom
Ed Hare, KA1CV, Laboratory Engineer ehare
Rus Healy, NJ2L, QST Asst Tech Ed, Product Rev rhealy
Chunk Hutchinson, K8CH, Membership Svcs Mgr chutch
Bart Jahnke, KB9NM, VE Dept Manager bjahnke
Dave Newkirk, WJ1Z, QST Asst Tech Ed, Hints dnewkirk
Paul Pagel, N1FB, QST Asst Tech Ed, Tech Corres ppagel
Rick Palm, K1CE, Field Services Manager rpalm
Mark Wilson, AA2Z, QST Managing Editor mwilson

Tammy-Beth Zimmerman, KA1WWP, Membership Asst tzimmer
Technical Information Service, tech questions tis
DXCC dxcc
Awards (WAS, etc.) awards
Contests contests
Outgoing QSL Bureau buro

For other questions (ARRL policy issues, etc.), try
2155052@mcimail.com, which sends them to the front office.

| The Washington Area Coordinator for the ARRL, Perry Williams W1UED
| (sort of our "lobbyist" to the FCC and Congress) has mcimail access
| at 2242662@mcimail.com.

| Fred Maia, W5YI, another large VEC, also has mcimail access at
| 3511297@mcimail.com.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones
(this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and
contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY
11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449,
FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet
70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655.
Subscriptions to 201 Latrhop Way, Ste D, Cacramento, CA 95815,
(800) 365-SUBS - lots of special interst columns, like QRP,
ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 -
up-to-date information on Amateur Radio happenings, including
VE information and statistics

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent
required under age 17), be a US citizen or resident alien, possess a
valid Amateur Radio license, possess a station capable of operating
on MARS HF frequencies, and be able to operate the minimum amount
of time for each quarter (12 hours for Army and Air Force; 18 hours
for Navy-Marines). Novices must upgrade to Technician within 6
months, else be dropped from MARS. No-Code Techs can apply, provided
they have transmit and receive HF capability for MARS frequencies
(they don't need transmit capability for Amateur HF frequencies). For
application forms contact:

Chief, Air Force MARS
TIC/DLTXM
Scott AFB, ILL 62225-6001
(618) 256-5552. Or, contact via Internet goes to

__daniels@server.af.mil, put "Pass to MSgt Trimmer" in subject line.

Chief, Army MARS
HQ, US Army Information Systems Command
ATTN: AS-OPS-OA
Fort Huachuca, AZ 85613-5000

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it thru 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. If you have his/her callsign or name, you might also try one of the on-line callservers shown above.

** Is there an on-line copy of the FCC Part 97, or FCC Amateur Radio
** allocations or question pools?
Part 97 is available by ftp from wuarchive.wustl.edu, file is mirrors/misc/hamradio/part97.txt.

An ASCII copy of the question pools are avilable by ftp from
uxc.cso.uiuc.edu (128.174.5.50) in /pub/ham-radio/<class>-pool.txt.Z,
where <class> is novice, technician, general, advanced or extra.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive
these newsgroups as mail digests. Posting is also a one-shot thing.
If you post and someone missed it, it is gone. A better way would be
to announce the existence of your program here, along with
information on how to obtain a copy of your program. You can also
submit it to one of the FTP archive sites, which will allow the world
to access it without you having to mail it to each requestor. If you
just GOTTA post it somewhere, post it to more appropriate groups,
like comp.sources.unix or alt.sources or comp.binaries.pc.

The following is a monthly posting of frequently asked questions for
Amateur Radio. Due to the increasing size of this list, I've broken it into
4 Parts (and will break it further if necessary) to keep each Part under
10K bytes.
Part 1 - Beginning Amateur Radio questions
Part 2 - "Where can I find ..." computer questions
Part 3 - Amateur Radio Organizations and Publications
Part 4 - Common Advanced and Technical questions
If you have any questions you think should be added, please email to me at
dls@genrad.com.
This FAQ should ONLY be reposted once a month. If someone asks a question
that is answered by this FAQ, I suggest emailing to that person, or,
alternately, post only the section that answers the question, NOT the entire
FAQ posting. Read news.announce.newusers for proper net etiquette.
This FAQ is available via anonymous FTP from ftp.cs.buffalo.edu.

FREQUENTLY ASKED QUESTIONS
Part 4 - Common Advanced and Technical questions

Table of Contents:
** What are the different US amateur classes and what can each of them do?
|** I'm confused. What do all those abbreviations mean???
** What do all those "tones" mean?
** Where can I learn more about Amateur Radio if I live outside the USA?
** How can I get a "reciprocal license" if I am a licensed ham from another
country?
** My apartment complex does not allow outdoor antennas, now what do I do?
** I got TVI...HELP!!!
** What do you need to get started in packet radio?
** What do I need to get started in satellite communications?
** Did you know that you can get college credit for being a ham?
|** On what frequencies does JPL and GSFC retransmit the shuttle audio?
|** Can I take my HT on an airplane and operate it if I get the permission
| of the captain?
|** What is the standard for measuring Morse code speed?
------------------------------------------------------------------------------
** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice priveleges on 10 meters, and full priveleges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
Technician - has full priveleges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
```

code test.
General - has all Technician priveleges, plus larger access to more HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15, 12, and 10 meter bands. A General class amateur can give Novice tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question General test.
Advanced - has all General priveleges, plus wider band access on 80, 40, 20, and 15 meter bands. An Advanced class amateur can also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and 50-question Advanced test. The Advanced test is the most difficult of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General, Advanced and 40-question Extra test.

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio).
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and does not require any license to operate
CQ An on-the-air request for a conversation with anyone
| "dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
| to quickly check that you have not had a "duplicate" contact
| with someone (on a specific band or mode) in a contest
| FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for 24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs who provide free communications for overseas GIs and other Federal services. MARS operators are licensed under DoD instead of FCC.
NTS National Traffic System, a way to send radiograms
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
| PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
RTTY Radio Teletype - older form of computer communications on HF

SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a chance to talk to astronauts in space. In CAP talk, Search and Rescue EXercise, practicing for the real thing.
SSB Single Side Band - need less band width than AM or FM
SSTV Like ATV but slower and used on lower bands
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
YL Young Lady, non-ham girlfriend or female ham
XYL eX-Young Lady, or wife
2m Shorthand for "2 meters", which is a reference to the wave-length of a common Amateur frequency band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to hear. It's used as a "PL Tone." PL is "Private Line", a trademark of Motorola for their implementation of CTCSS (Continuous Tone Coded Squelch System). Basically, the transmitter sends the signal with the Sub-Audible tone and the receiver only opens when it hears signals with that tone. Signals without the proper tone are ignored. This is useful for "closed" repeaters, or for repeaters on the same frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS probably means Dual Tone Squelch System and refers to the feature of providing a predefined sequence of Touch Tone digits to open the repeater for transmit. DTSS is an alternate method from CTCSS, which provides a way to use a "closed" repeater even if your radio doesn't do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the USA?
Write to the ARRL and ask. They can usually tell you how to get a license in your country.

** How can I get a "reciprocal license" if I am a licensed ham from another
** country?
You need to submit a FCC Form 610-A to the FCC, PO Box 1020, Gettysburg, PA 17326. They will then send you a reciprocal permit for alien amateur licensee (FCC Form 610-AL). You must be a citizen of a country with which the United States has arrangements to grant reciprocal operating permits to visiting alien Amateur operators.

** My apartment complex does not allow outdoor antennas, now what do I do?
First of all, don't dispair. Many hams have similar problems. Many books offer advice for the growing group of hams that cannot put up antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.

* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up something as long as it "is invisible" or "doesn't disturb your neighbors" or "doesn't attract lightning".
* Operate primarily from your car.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a complete list. There are also books on the subject available from ARRL.
* If cable TV is an underground feed, look for central distribution box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is disconnected and you use rabbit ears instead. It could be the cable company's problem!
* Calling the cable company may get results, since they are also responsible for RF leakage from their equipment. However, they are very often obstinate. Good luck!
* Try moving the radio antenna further away from the TV sets. Make sure the SWR is LOW.

** What do you need to get started in packet radio?
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters or 1.25 meters is most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

** What do I need to get started in satellite communications?
For more information about Amateur Satellite Communications, try AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

** Did you know that you can get college credit for being a ham?
It's true! You can receive up to 14 credits in electronics and engineering thru placement tests for CLEP (College Level Entrance Placement) exams and DANTES (Defense Activity for Non-Traditional Educational Support) exams if you have an Advanced or Extra class

Amateur license. For more information, ask your campus education
office or (for DANTES) your military education office.

** On what frequencies does JPL and GSFC retransmit the shuttle audio?
Station VHF 10m 15m 20m 40m 80m
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165 3.840
W6FXN 145.46
K6MF 145.585 7.165 3.840
All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - Jet Propulsion Laboratory (JPL), Pasadena, CA
W6FXN - Los Angeles, CA
| K6MF - Moffett Field, CA

|** Can I take my HT on an airplane and operate it if I get the permission
| of the captain?

| It is illegal to operate an amateur radio (transmit AND receive!)
| aboard a commercial airliner. The captain is NOT authorized to give
| you permission to use a radio. For reference, the pertinent portion
| of the Federal Aviation Regulations (FARs) is Part 91, paragraph 91.21.

| Due to airport security, you may have a little difficulty carrying the
| HY (or any electronic equipment) onto the airplane. Generally, you
| can appease the security guards, simply by showing that the unit is
| operations and doesn't have a bomb inside. For a radio, just turning
| it on and opening the squelch satisfies them. Expect more difficulty
| during periods of increased security.

| On a private airplane, it is legal to operate an amateur radio if you
| have the permission of the Pilot-in-Command. It is possible for the
| radio to interfere with the plane's navigation or communication
| equipment, so be sure to ask first, and always obey the requests of
| the PIC. He knows his airplane and radios better than you do.

|** What is the standard for measuring Morse code speed?

| The word PARIS was chosen as the standard length for CW code speed.
| Each dit counts for one count, each dash counts for three counts,
| intra-character spacing is one count, inter-character spacing is three
| counts and inter-word spacing is seven counts, so the word PARIS is
| exactly 50 counts:

| PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
| . - - . . - . - . . . . . .
| 1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
| ^ ^ ^
| ^Intra-character ^Inter-character Inter-word^

| So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or
| one count every 240 milliseconds. 13 words-per-minute is one count

| every ~92.3 milliseconds. This method of sending code is sometimes
| called "Slow Code", because at 5 wpm it sounds VERY SLOW.

| The "Farnsworth" method is accomplished by sending the dits and dashes
| and intra-character spacing at a higher speed, then increasing the
| inter-character and inter-word spacing to slow the sending speed down
| to the desired speed. For example, to send at 5 wpm with 13 wpm
| characters in Farnsworth method, the dits and intra-character spacing
| would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the
| inter-character spacing would be 1.443 seconds and inter-word spacing
| would be 3.367 seconds.

3695. Pro-80 Question

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 16:54:59 UTC
From: David_G._Hadzima.wbst214@xerox.COM
Message-ID: <"11-Oct-91.12:54:59.EDT".*.David_G._Hadzima.wbst214@Xerox.com>
Source record: 292579

Question: is anybody aware of any additional functions that can be activated
on the Sony Pro-80 receiver through various button combos and/or modfications?
Thanks for any input.

David Hadzima
dhadz.wbst214@xerox.com

3696. Re: Amateur Radio interference to police RADAR - info?

Newsgroup: rec.radio.amateur.misc

>the emitting device into an automobile?

If you knew the gun frequency very acurately, you could use a
CW frequency VERY SLIGHTLY DIFFERENT to simulate a moving target
at a given speed if you were sitting still. Since you are moving, you
would have to add the doppler shift to the equation. Then if you were
moving faster than the desired reading from all this, the radar gun
would still display your actual speed unless some strange mixer
products locked the loop somewhere else. In other words, forget it.
The only way to get a specific reading on the radar gun is by
modulating the carrier with the necessary audio tone to fool the
radar into thinking it is a doppler shift. Even here, the gun might
still lock onto the real doppler shift if it is higher in frequency.

I am using twenty foot pieces of 3 inch white pvc to support
the 160 foot lengths of a horizontal wire V-beam. PVC will
eventually bend unless you use pretty heavy stuff, and I had
to guy these to keep them straight. I am going to replace them
with 4x4 posts next spring. K9ALD

From: ROBERTT@ukcc.uky.edu
Message-ID: <9110111934.AA21468@ucsd.edu>
Source record: 292669

I have in my shack a like-new Swan 500C which I picked up in Dayton several years ago. It looks like it has never been used, and I have never even given it a smoke test.

I am thinking of giving this rig to a young friend who just got his General license and has nothing to put on the air. Could I please get some opinions about this particular rig? Would I be doing him a favor, or should I let him find something else and have the Swan humanely destroyed? I have no personal experience or familiarity with this line.

Thanks! Private responses will be much appreciated....and I will watch for responses on the list.

>Wood is more traditional, a little more expensive, maybe more work
>(painting, etc.). I've heard that PVC tubing gets brittle in
>sunlight. Does anyone have any experiences either way?

My experience with PVC is that even schedule 40 (so-called standard
weight) PVC pipe holds up very well even under some pretty stiff
wind loading (~40 mph). My complaint with it is that it's TOO
flexible: under the aforementioned winds, my 20', 3" OD mast would
be all over the place. Not exactly an ideal support for a directional
antenna, even if I had used a thicker pipe. Wood (either 4x4 or
2 sistered 2x4s) would be much better in that regard.

Some plastic pipe contains UV inhibitors to retard deterioration of
strength due to sunlight exposure. If you need to use PVC, you
can probably find a paint or coating (such as scotchkote) to block
the UV.

>If I use PVC tubing, what diameter should I go for?

You should determine the tensile strength of PVC, and for a given
pipe diameter and wall thickness, determine what wind and top (antenna)
loading that pipe will withstand. In a '88 or '89 Ham Radio
magazine, there was an excellent article discussing pipe masts
made of STEEL pipe, although I found it easy to adjust his calculations
to PVC pipe strength.

> If I go for wood, what size wood (I would guess 16 foot 2x4s)?

Guyed, I'd think doubled 2x4s would hold a beam at 40' with no problem.
Of course, if you want to feel more confident, get help from an ME
to calculate the bending strength of the lumber you want to use,
and choose the size accordingly.

Yes, it does. There's always paint, but that has to be maintained.
If you can stand the sight of it, wrap it with aluminum foil tape.
That ought to last a looong time. It's expensive. A brand
name is Shuretape. Look for it in the plumbing section.
(I'm NOT talking about duct tape or anything else with paper
or fabric in it--this stuff is extra heavy aluminum foil with
a very tacky adhesive.)

Hi,

I have a Yaesu FT-2400 2m mobile transciever and would very
much appreciate if anyone has seen any mods for this unit that
they could pass along or point me to.

I am particularly interested in receiving the aircraft band
if possible. Since the unit has extended receive, I thought
that it may have a "built-in" mod and perhaps some of you may have run
across it.

Thanks

Manny

3705. Callsign Project Part 4

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-11 22:36:02 UTC
From: beers@sybil.cs.Buffalo.EDU
Message-ID: <1991Oct11.223602.23156@acsu.buffalo.edu>
Source record: 292584

CALLSIGN PROJECT PART 4

The UB Amateur Radio Club will be taking over the wonderful service
provided by Rusty Carruth N7IKQ for the past few years.

This is how it works: Those people interested in obtaining a copy of the
US Callsign Database on tape can send us a donation. When enough people have
done so (enough to cover the cost of the tape), we will begin making copies
and sending them out to you. The following types of media and file formats
will be supported:

Media: 9 track tape
1/4" Sun cartridge
8mm tape
floppy disk (720K/1.44Mb 3.5")
Formats: compressed/uncompressed tar
raw data (cat > /device),
compressed raw data (cat | compress > /device)
arc (not standard UNIX, but handy for those PC users out there.
We have version 5.21)
cpio (if you really, really, really, can't do tar...)

The tape contains one entry for every ham in the US, not including club
stations.

Donation should be as in years past: $25 plus shipping and media (if
you're not sending it). Please drop me an email if you want a copy of the
tape, and specify what format you'd like it in and on what media.

Checks (payable to "Amateur Radio Club - SA") and media should be sent to:

State University of New York at Buffalo
SA - Amateur Radio Club
111 Talbert Hall
Buffalo, N.Y. 14216

If you have any questions, feel free to email me at one of the addresses
below!

73 for now

JPB7946%TNTECH.BITNET@cunyvm.cuny.edu (Jon Brazelton, Coordinator, Residence Halls) writes:

>If you have comments concerning the following radios, PLEASE let me know
>what you think:
> Yaesu FT-411E
> Yaesu FT-470
> Alinco DJ-120T
> Alinco DJ-160T
> Alinco DJ-560T

I can comment on the Yaesu FT-470. It is a 2m/70cm dual-bander that is one of the best price-vs-performance values on the market. It is loaded with features; so many, in fact, that I can't remember how to use them all. The radio has been a very good, reliable performer for me. I feel like my money was very well spent.

Its #1 drawback in my book is its audio. It is difficult to hear if you're outside in a noisy environment, such as next to car traffic. However, I did get the mike/earphone accessory, and that solves the problem. That is a nice accessory when I use it in the car also.

Others have reported problems with "intermod". I have trouble with receiving spurious signals occasionally, but this is a problem with every handheld scanner or HT I have used. It does not appear to me that the 470 is any worse than the others. Some earler models apparently had a problem with some sort of interference with the weather channel (162.45), but this problem has apparently been solved.

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for unlimited distribution.

* ARSENE LAUNCH NEWS *
======================
RACE president, Jean Gruau F8ZS, announced that ARSENE, a French OSCAR
satellite is to be launched by an Ariane rocket during the V53 flight
together with the main passenger HISPASAT in July 1992.

RACE, the Radio Amateur Club de l'Espace was founded in 1980. Its goal was
to study the possibility of building a French amateur satellite named
ARSENE, an acronym for Ariane Radio Amateur Satellite pour l'ENseignement de
l'Espace. It was designed by student engineers, and the electronic modules
were built by amateurs from ATEPRA, Association Technique pour l'Experimentation
l'Experimentation du Packet Radio Amateur.

ARSENE will carry three packet transponders, using standard AX25 FSK at 1200
baud. The three uplink frequencies will be in the 435 MHz band and the single
dowlink frequency will be in the 145 MHz band. A mode S linear transponder
will also be available.

The high orbit of ARSENE will provide a mean access time of nearly 12 hours
per day for stations up to latitude 40 degrees. The orbit will be equatorial
with an inclination of 0 degrees. The perigee will be around 20000 km and
the apogee around 36000 km, thus giving an orbital period of 17h 30m.

The 18 watt output power of the satellite will provide a comfortable link
budget allowing connections through the packet transponder of ARSENE between
stations without special equipment.

Information bulletins will be forwarded regularly to keep the amateur
community informed on late developments.

[Info from Bernard Pidoux, F6BVP @ F6BVP.FRPA.FRA.EU]

* SARA-OSCAR-23? *
==========
Last week, SpaceNews featured SARA (Satellite for Amateur Radio-Astronomy)
in its "Satellite of the Week" column. Since that report, reliable sources
have indicated that SARA is not an amateur satellite and should not be
considered an Orbiting Satellite Carrying Amateur Radio (OSCAR).

At the Phase 3-D design meeting in Marburg, Germany earlier this year,
it was disclosed that the sponsoring group for the French satellite, SARA,
initially requested an operating frequency allocated to semi-commerical
satellites. However, the French telecommunications authority rejected this
and assigned a frequency in the 2-meter Amateur satellite subband instead.

The French SARA satellite is from ESIEESPACE, an aerospace club of
ESIEE (Ecole Superieure d'Ingenieurs en Electrotechnique et Electronique)
and has an experiment on board from a French Amateur Radio-Astronomy
Club from Meudon. Recently, radio amateurs have become confused over
SARA and probably associate amateur astronomy with Amateur Radio.

The IARU INCLUDING the ESIEESPACE representatives concluded in their
meeting of December 1990 that SARA was not in accordance with the
ITU definition of Amateur Radio and not in accordance with IARU
definition of amateur radio, and therefore was not an amateur radio
satellite. The IARU has concluded that SARA is a non-amateur radio
satellite and therefore is a pure INTRUDER of our exclusive amateur band.

[Info via Freddy de Guchteneire, ON6UG, IARU Satellite Coordinator]

* AREMIR INFORMATION *
==========
In a similar case, the frequencies used by the recent AREMIR experiment
carried on the Soviet space station Mir were not very well chosen,
conflicted with AO-13 and UO-14 engineering beacon frequencies and
were not coordinated by the IARU. On October 17, 1990, AMSAT-OE asked
IARU Satellite Coordinator, Freddy de Guchteneire, to coordinate frequencies
for an unmanned experiment on-board Mir. From the supplied information,
the experiment was to be seen as a packet beacon and not as Mir or Shuttle
traffic. As satellite coordinator, Freddy consulted all AMSAT
organizations worldwide (known to IARU) for the AMSAT-OE proposed
frequencies which were NOT those used by AREMIR. As a result of this
consultation, (only one country made some reservations), AMSAT-OE has
received permission to use their own proposed frequencies.

It is not clear why AREMIR did not use their coordinated frequencies,
since OeVSV (Austrian Amateur Society) and RSF are both members of IARU
and should have known the IARU recommendations.

Freddy de Guchteneire, ON6UG
IARU Satellite Coordinator

* SATELLITE OF THE WEEK *
==========
The "Satellite Of The Week" feature is in response to numerous requests
for amateur satellite transponder passband and beacon frequency information.

All active amateur satellites will be covered in upcoming weeks.

Name : RS-12/RS-13 Catalog Number: 21089
Orbit : Low-altitude, circular

RS-12/RS-13 is very similar to RS10/RS11 and is also integrated into a
parent "COSMOS" Soviet Navigation satellite. RS-12/RS-13 both support
Mode A, K, T, KA and KT linear transponders, as well as several "robot"
autotransponders.

RS-12 Frequency Chart

Uplink Passband Downlink Passband

Mode K 21.210 - 21.250 MHz 29.410 - 29.450 MHz
Mode T 21.210 - 21.250 MHz 145.910 - 145.950 MHz
Mode A 145.910 - 145.950 MHz 29.410 - 29.450 MHz

Beacon Frequencies: 29.4081 MHz, 29.4543 MHz, 145.9125 MHz, and 145.9587 MHz.
Robot Uplinks: 21.1291 MHz and 145.8308 MHz

RS-13 Frequency Chart

Uplink Passband Downlink Passband

Mode K 21.260 - 21.300 MHz 29.460 - 29.500 MHz
Mode T 21.260 - 21.300 MHz 145.960 - 146.000 MHz
Mode A 145.960 - 146.000 MHz 29.460 - 29.500 MHz

Beacon Frequencies: 29.4582 MHz, 29.5043 MHz, 145.8622 MHz, and 145.9083 MHz.
Robot Uplinks: 21.1385 MHz and 145.8403 MHz

Mode KA combines both Mode K and A uplinks into a common Mode K downlink.
Mode KT uses a Mode K (or T) uplink and downlinks to both Mode K and T
downlinks simultaneously.

Message-ID: <199110120159.AA04490@tilde.csc.ti.com>
Source record: 292676

Recently I came across some information saying that a Michigan Ham had proposed to FCC that the Ham frequencies be opened up to personal business. The rest of the story was that FCC had (or was) pressing ARRL to submit a proposed rule that would, in effect, hand over all of amateur radio frequencies to business and government entities; leaving "emergency communications" and other amateur activities what's left. Under that scenario, "other amateur operations" would be considered secondary to emergency comm, and therefore at the bottom of the totem pole when it comes to who gets what. Has anyone else heard of this? Or is it a hoax? Is it rumor or is it truth?

Dube AB5AP

Not being the type of ham who will spend 3 hours in a pileup to get a new rare country worked, but usually preferring to actually make new friends and TALK to people around the world, I was a little unhappy when ZA first went on the air and took up the ENTIRE Advanced portion of 20m. ... But, recognizing that much of the ham community was really excited about this new country, I figured it wasn't that big of an inconvenience to be shoved off my regular operating frequencies for a couple of weeks.

In fact, I even worked one of the operators, much to my surprise, when he happened to appear on a frequency I had just left the radio on while I was writing out QSL cards (and it only took 3 tries since not too many other folks heard him the first 30 seconds).

However, tonight, I had just finished a very nice QSO with a Soviet ham and another Soviet called me, and I was just trying to get his call sign, when one of the ZA stations started working 0.2 kc up. I don't care if the guy is on a bloody DX-pedition ... that's not a license to rudeness, and he is not, in my opinion, exempt from the common courtesy of asking if a frequency is in use. When I told him the frequency had been in use, expecting at least an apology, he simply answered that this was a DX-pedition frequency (I didn't know they were legally assigned) and I should find a new frequency. The guy I was trying to talk to said he'd try to find a new frequency, but he was just DROWNED by QRM. So, that was that ... and while many of the DX hunters might think that pales in comparison to Working Albania, I happen to be working toward an oblast award.

Well, now I'm sorry I that I already sent my QSL card for ZA,
with green stamps and IRCs, because I really don't feel like supporting THAT kind of activity on the airwaves. :-(

I recall one repeater in Arizona that the local old farts were just SO proud of. They even had someone monitoring it 24 hours a day - some retired dude, I assume, since people with a life would have had something better to do.

Anyway, the control operator had standing instructions to shut off the repeater without warning at the slightest infraction, and he did.

So, with about half-a-dozen pranksters randomly interjecting the odd curse or rude noise, that repeater started spending most of its time off the air. Soon it got to the point that even the cleanest of operators wouldn't use it, because you could never depend on it being there when you needed it.

In San Diego, one repeater trustee used to turn off his club's system whenever he didn't like what was happening on the channel. We built a second repeater with two receivers - one on the output - and rigged it up so that if the club repeater didn't key within about a half second (presumably because it was shut down), ours would activate. That club soon got themselves a new trustee.

No, real repeater owners learn quickly that the only time you turn the repeater off is when it breaks. Otherwise you're just playing repeater baron, you're not serious about it.

You may humanely destroy the Swan by placing it carefully in a sturdy box and then sealing it tightly with tape. Dispose of the carcase by putting my name and address on the box and mailing it to me...

Seriously, the Swan is a good rig - If anything does go wrong, it'll give the new person something to test his new-found knowledge on..

>damage to Amateur Radio would be limited.

Barring all arguments to what is obscene or not, there are a couple arguments why someone wouldn't want to turn the repeater off which have already been stated. Though the repeater is called a "dumpung ground" by some, remember dumps have a purpose. They keep garbage and refuse centralized. Take away the dump and the garbage isn't going to magically disappear, it will be put (go) elsewhere. Turning off the repeater isn't going to make the people go away, they'll just move somewhere else. Keeping the Mt. Wilson box on the air is limiting the "damage" to ham radio since it gives everyone a place to play.

There are few "legitimate" users on the 435 repeater anyway. If someone wishes to really communicate through a repeater in LA, 435 is one of the last boxes to come to mind...

============================================================

SB DX @ ALLBBS $KT7H284
RTTY DX Notes 1of3 10/11/91
RTTY DX Notes for week ending October 11, 1991
BID: KT7H284
Part 1 of 3.

During the CQWW RTTY Contest the other week, I really saw the band
plan working. The RTTY stations were right up to 14100 KHz and the
packet stations were 14100 KHz and above. The AMTOR stations were
from 14060 to 14085 KHz, which only proves that the band plan will
work.

Then of course there are the WARC bands. I wonder how many realize
that your triband beams have some lovely phantom aerials? For
instance, some triband beams work fine on 18 MHz with a good VSWR.
Others work fine on 24 MHz with a VSWR of 1.1 to 1. Now the thought
occurs that maybe that would be a good place for the BBS's or
mailboxes, and leave the traditional bands for the live communicators.
Or is that asking too much?

Our thanks this week go to DJ3IW and the DB0SPC DX Packet Cluster,
IK5AAX, JH1QDB (a visitor to the shack), K4FJ, OD5NG, TG9VT, VK2EG,
VK3EBP and W2FG and the Tri-State DX Packet Cluster Network. We thank
you all for your assistance to make these notes interesting. We
really appreciate the help.

SB DX @ ALLBBS $KT7H286
RTTY DX Notes 3of3 10/11/91
RTTY DX Notes for week ending October 11, 1991
BID: KT7H286
Part 3 of 3.

QSL Information.

ZA1A cards go to Northern California DX Foundation, Box 1, Los Altos, CA 94023

EM3W cards go via ZL1AMO.

RI77, Irckik Taskeh 702100 USSR.

3B9FR, Box 31, Rodreguez, Mauritius.

TK5IU, Box 223, Ajacco, Corsica.

RA2FB is in Kaliningrad. Box 261, Sovetsk 238700, USSR.

ZK1AP Cards Via Box 494, Rorotonga, Cook Islands.

Notes of Interest.

The Albanian operators have now seen it all. SSB, CW, RTTY and even AMTOR. On the 6th ZA1A had an ARQ contact with OD5NG for the first ever ARQ contact from Albania. Luciano has done a marvelous job and must be congratulated on his effort. Tom, OD5NG was overjoyed to be the first ARQ contact. Maybe he will get a special QSL card.

JA1UT and the group are still expected from Cambodia (XU) from October 11th for a week's operation. The calls will be XU1DK and possibly XU1DKA.

San Felix (XQ0X) should show around October 13th for about one week's operation. QSL to CE3ESS.

There is a possibility that TN1AT may appear on RTTY in the near future, now that he has been told that normal typewriter ribbons will work in his T100 Siemens, and that there are a brand of glossy towels that will fit his machine to print on. Now he should be able to see what his Siemens is printing.

UA0FDX is on Sakhalin Island.

UZ0LWC is at Vladivostok.

W2UP is looking for high claimed scores in the CQWW RTTY Contest. Drop him a note at W2UP @ WB3JOE PA.USA.NA.

GL DE DX1 (VK2SG)

This is the packet edition of the RTTY DX Notes written by VK2SG, edited and relayed by Tad, KT7H @ N7DUO.WA.USA. Send RTTY DX news to VK2SG @ VK2AGE.NSW.AUS.OC

Roger, you need to specify which IC-22 you mean. There was the IC-22,
IC-22A, IC-22S and IC-22U. I could help with the 22A, but not the others.

INFO: ALL RACES OPERATORS IN CA (ALLCA: OFFICIAL)
ALL AMATEURS U.S. (@ USA: INFORMATION)
FROM: CA STATE OFFICE OF EMERGENCY SERVICES (W6HIR @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832 (916)427-4281
RACESBUL.191 DATE: Oct. 14, 1991
SUBJECT: MACS - Multi-Agency Coordination System
We share the following with you for evaluation for possible use in your jurisdiction. Submitted by Derald Smith, Assistant Director, City of Stockton, California, Office of Emergency Services.
The Multi-Agency Coordination System (MACS), an extension of the Incident Command System, streamlines procedures for coordinating mutual aid and allocating resources during emergencies when more than one agency or jurisdiction is involved in the response. The system has been adopted by the San Joaquin County Fire Chiefs and is under review by other probable users.
RACES operators should note and remember the following new terminology already in use to denote response operating modes; in other words, the intensity of response. = W6HIR =
MODE 1: A non-critical county-wide situation not requiring extended use of multi-agency resources. Emergency Operating Centers not on 24-hour operations. Normal communications sufficient.
MODE 2: A period of heightened preparation, such as seasonal anticipation of fog, fires, peak high tides. In this mode, OES and its RACES will review procedures and equipment status. The RACES possibly on standby.
MODE 3: Alert to an emergency or more serious potential requiring multi-agency response. EOC's partially activated and staffed; RACES alerted and selectively employed. = W6HIR =
MODE 4: Signifies the existence of an all-out county effort requiring concerted multi-agency coordination. EOC's and the RACES fully activated.

3724. Re: "Cellular" telephone frequencies (was: Amateur radio interference to policeRADAR info?)

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-12 19:48:33 UTC
From: allbery@NCoast.ORG
Message-ID: <1991Oct12.194833.2375@NCoast.ORG>
Source record: 292598

As quoted from <10OCT91.23824466.0042.MUSIC@SLUMUS> by X24S%SLUMUS@cunyvm.cuny.edu (Dan Reuben):

```
+---------------
| was able to listen in on cellular telephone communications with my 2m
| handheld. This was on a frequency of roughly 151 or 152 MHz. Just to
| dismiss this as a freak occurrance, I was able to do this a few times.
| My question is then, are all cellular communications in the high range
| of 800 MHz or so?
+---------------
```

Older (non-cellular) radiotelephones used HF, VHF-low, and/or VHF-high frequency ranges. That frequency range sounds just about right.

("Cellular" has to do with the "base" station distribution and power, not with the fact that it's a radio-telephone system.)

In looking for VHF amplifiers to construct, also look in the MOTOROLA RF Power Transistor books. There is a lot of really good ideas, including board layout, parts list and construction hints.

I have built some of them with reasonable success.

>I just got back from the Police Chief's convention in Minneapolis where they were showing a laser speed gun.
>Are there any laws against jaming light signals?

The relevant offences -- deliberately jamming legitimate spectrum users, and deliberate obstruction of law enforcement -- apply regardless of wavelength. The shorter wavelength helps by taking you beyond FCC regulations, meaning that there is no legal problem with transmitting on the same frequency if there is no intent to jam or obstruct.

(As Gary Coffman noted, given a good lawyer it is most unlikely that they could prove intent, especially if you have some superficially-plausible experimental purpose for the equipment and act like a serious experimenter by keeping a notebook etc. However, lawyers cost money even if you are innocent, being arrested can ruin your whole day even if the charges are dismissed quickly, and if by some mischance the charges stick and your lawyer blows it, the consequences are fairly serious.)

On a practical note, the shorter wavelength makes effective jamming, and even effective early warning, virtually impossible.

I received an enourmous amount of help from others on the net regarding this CI-V converter. I received 3 main designs using either 1488/1499 drivers, MAX232 or simply a two transistor circuit. I just complete a converter based on the 1488/1489; it works!! This design can be found on pp 24-25 of September 1991 "QST". If you are interested in the other designs that I received, leave E-mail.

Please give an internet address (or tell me how to address my mail using a BITNET address :-)) and I'll forward all that I got.

]In article <14570182@hpnmdla.sr.hp.com> alanb@hpnmdla.sr.hp.com (Alan Bloom) writes:
]>Why not just have a control operator turn off the repeater whenever
]>illegal operation occurs? Of course, this means that legitimate
]>users can't use the machine either, but they can't anyway when
]>the chaos is going on.
The FCC can hold responsible a repeater trustee who does not do so.

]I recall one repeater in Arizona that the local old farts were just SO
]proud of. They even had someone monitoring it 24 hours a day - some
]retired dude, I assume, since people with a life would have had
]something better to do.
]
]Anyway, the control operator had standing instructions to shut off the
]repeater without warning at the slightest infraction, and he did.
]
]So, with about half-a-dozen pranksters randomly interjecting the odd
]curse or rude noise, that repeater started spending most of its time
]off the air. Soon it got to the point that even the cleanest of
]operators wouldn't use it, because you could never depend on it being
]there when you needed it.

Which repeater was that?

]No, real repeater owners learn quickly that the only time you turn the
]repeater off is when it breaks. Otherwise you're just playing repeater
]baron, you're not serious about it.

Real repeater owners take the regulations seriously and try to abide by
them. If that requires shutting down the repeater, then they do that.
It doesn't mean shutting it down because you dislike the conversation
(although any repeater owner has that right). It does mean shutting it
down if you become aware of abuse, and there is no other way to eliminate
the abuse.

We have open autopatches here in central Arizona. If we did not adhere to
this practice, we would find those patches filled with business calls and
unlicensed bootleggers (this is not speculation - it is experience). We
would also be in violation of our responsibility as repeater owners.

This doesn't mean I believe that every time someone belches, the repeater
should be shut down. To do so is to encourage the idiots (it gives them
power over the repeater because they can get it shut down). It also causes
us T-hunters to lose the signal we are tracking :-) However, to

consistently allow illegal operation on one's repeater is IMHO irresponsible.

As far as I know, this is truth. Thomas Stanley, chief engineer of the FCC, mentioned Haller's suggestions when he gave the after-dinner talk at the ARRL Computer Networking Conference the other weekend.

Personally, I think some significant reform in the no-business rules is called for. Right now we seem to have 500,000 armchair lawyers who all revel in interpreting the no-business rules in the most restrictive fashion possible. Some of them are FCC employees, like W4JJ - who cited the now-famous "900" message last winter.

Apparently Haller picked up on my comment (in QEX) that a simple "hams shalt not sell communications services" would suffice to minimize any abuses. I still believe this, and I'm happy to see the FCC thinking along the same lines.

TEC film is fine, but expensive. Avery makes a transparency intended
to be used with overhead projectors that is rated to run through
laser printers and copiers. The Avery brand should be available at
most stationary and computer supplies outlets.

You need to answer one question before anyone can help you. There were at least two different (and I think there were more) versions of the IC-22. Some were diode programable and limited in xmit range, some were thumbwheel programmable and covered the entire band. There may even have been a crystal version. So, which one do you have??

/s/ Bob Gettys N1BRM - owner of an IC-22U (thumbwheel programmable)

In order to keep things a bit nicer, why not just put the 1488/1489
driver/receiver externally and recreate the TTL signals needed "between"
the PC and IC-735 required signals.

I still don't own one of these critter, but will soon. Everything
I see about them is nice. I'm particularly going to buy one for
interfacing to the digital radio world.

3737. FT5200 crossband mod file

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-13 20:01:02 UTC
From: wa2ise@cbnewsb.cb.att.com
Message-ID: <1991Oct13.200102.5046@cbfsb.att.com>
Source record: 292610

copied from packet:
From: n2fwq@wb2gtx.nj.usa.na (DANIEL)
To: mods@allbbs
Subject: ft5200 crossband mods

Tony Lessing KA3KVD 76474,2051
Ken Hoehn/N8NYO [SysOp] 73670,3622

the mod for the FT5200 cross band mod. It goes as follows:

1. Disconnect DC power from radio. 2. Unlatch and remove the front control head. !Do not take apart the control head or the warranty will go *VOID* :-) 3. Remove (6) screws from top cover of radio. 4. Remove (6) screws from bottom cover of radio. 5. Remove top and bottom cover.. being careful of the speaker that will want to fall out. 6. Remove the (2) silver screws (on each side of radio) holding front control head mounting plate to main body of radio. Remove the front mounting plate. 7. Locate and unsolder jumper pad 17. 8. Install the front mounting plate, and top and bottom covers. 9. Reconnect power.... you're ready to go..

10. To put in xband repeat press and hold the RPT key while turning on the radio. To stop... turn off the radio.

!! note !! It is suggested to disconnect the mic when in xband repeat, as it will be "hot". Adjust the volume knob for the desired repeat audio level.

Cheers, de Tony - KA3KVD

There is 1 Reply.

Regarding .... Jumper Pad 17 ....

This might seem confusing when first viewing the jumper pads... they are to the right of the 5_strip connector for the face plate and are numbered as follows

.. 20 18 16 14 12 10 8 6 4 2
.. 19 17 15 13 11 09 7 5 3 1

You will see that the number 17 is lower than the rest and that there are 2 pads above it... one in line with all the others (this is the correct one) and one that is horizontal and just above the number "17" (this should be left alone)

73 ... Tony

It is a bit rough cross-band repeating two repeaters (hardly efficient use of spectrum, now isn't it? (Honest..just testing)

Also, there are certain frequency combinations that just don't work, and
others that require one, the other, or both sides to transmit at low power.

Nice toy...now, a practical application???

Ken :)

Note: I haven't tried or verified this, proceed at your own risk. WA2ISE

3738. Any mods for the Bearcat 210 Scanner?

Newsgroup: rec.radio.amateur.misc

]Apparently Haller picked up on my comment (in QEX) that a simple "hams
]shalt not sell communications services" would suffice to minimize any
]abuses. I still believe this, and I'm happy to see the FCC thinking
]along the same lines.

I agree. There is almost a puritanical devotion by many to interpreting those non-business rules. It is truly silly that you cannot order a pizza from the autopatch - this is not going to lead to a commercial takeover of the ham bands (which is what the business rules are protecting against). If Pizza Hut set up a ham station to take orders, it would be a different matter. However, Haller is not proposing that PH could do this.

Likewise, Haller proposes relaxing the rules on public service events. Having tried to explain to even staff that we can tell them if someone gets hurt, but can't tell them who the first five in the race are, I can say that this restriction leads to a significant reduction in the usefulness of ham radio, at IMHO a cost to the public in loss of our services.

It is time to simplify those rules so that they are as flexible as possible while maintaining the amateur aspect of amateur radio, and prohibiting commercial uses. This means that the only business restriction should be the prevention of profiting from amateur radio activity (or, as Phil puts it - selling communication services).

Haller was a ham long before he was an FCC employee. I used to work with him when he was a radio station engineer.

3744. Major Solar Flare Alert - 13 October

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-14 03:49:04 UTC
From: oler@hg.uleth.CA
Message-ID: <0095012F.20F67080.12526@hg.uleth.ca>
Source record: 292615

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 21:00 UT, 13 OCTOBER

/\

No Impact Expected

MAJOR ENERGETIC EVENT SUMMARY:

Flare Size: Class M5.9/1N Location: N22E82 (Region 6879)
Tenflare: None. Times: Begin=1805, Peak=1815, End=1837

Sweeps: No Type II or IV Sweeps Observed.

NOTES: Radio emissions were relatively weak and discrete. Overall, a fairly "average" flare.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

A terrestrial impact from this event is not expected. Region 6879 may be capable of spawning another isolated major solar flare, although a detailed analysis of the region has not yet been possible due to the proximity of the region to the east limb.

/\

3745. Potential Major Solar Flare Warning - 13 October

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-14 04:12:05 UTC
From: oler@hg.uleth.CA
Message-ID: <00950132.579D31C0.12674@hg.uleth.ca>
Source record: 292618

/\

POTENTIAL MAJOR FLARE WARNING

13 OCTOBER, 1991

/\

ATTENTION:

New solar Region 6879 (N23E77) may be capable of spawning another major solar flare over the next several days. Most of the activity from this region should remain confined to the lower C and M-class levels. At the present time, this region is too near to the limb to discern any significant detail. However, it appears to be only moderately large in area and does not appear to be particularly complex. This may change as the region rotates more fully onto the disk for better observation and analysis.

This warning will remain in effect until further notice.

3747. Coil WInding HELP-For Shortwave receiver

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-14 04:42:16 UTC
From: ah157@cleveland.Freenet.Edu
Message-ID: <1991Oct14.044216.18830@usenet.ins.cwru.edu>
Source record: 292619

I am building a shortwave receiver out of the Radio Shack
Engineers Mini Notebook.I need a coil for the radio for something,
it says to wind 25-50 turns of 30 guage wire around a fil can.
That's film can.
Now,this wire is VERY small,like hair almost,will itmatter
if I use bigger wire,also is there a knack to doing this,does the
wire have to be right next to each other or can there be gaps
in it?
Try and help,I've never done this before,I even have an electrical
engineer at NASA stumped so I'm asking you hoping there is someone
who knows and hopefully the rest of you sorgatzes won't jump
on me for asking here.
Please reply via email.

I'm glad my posts are getting out -- our site has been having problems lately.

I found out about International Crystal (they're in Oklahoma City BTW -- I'll post a phone number if anyone wants it) and gave them a call. They didn't have any info on the HR-1680, but we were able to figure out everything they needed except for the load capacitance. The woman I talked with didn't suggest sending in the original crystal; I think I'll give 'em another call and see how that works out.

Thanks!

A word of warning about the conductive sprays some people recommend as a 'cure' for plastic-cabinet-RFI.
MAKE SURE you use the right spray, and if necessary, a primer too.
I have just seen the horrible mess you get when you use the *wrong* coating and it flakes off all over the inside of a PC. Like conductive dandruff, all over the planar-board..... crackle! Sputt!.... exit left one SIMM module and the video card....
Depending on the plastic your case is made of, you may require a solvent etching primer (which slightly dissolves the surface of the plastic and allows the conductive paint to keep its hold on the plastic).
Again, if you use the wrong paint, it could just dissolve the plastic with excessive zeal, and you may be left with a case with a texture like pizza...
consult the paint suppliers for details of the primers and other surface treatments... their support technicians are usually happy to help you get the best from their products.

Using the wrong paint system is a fine way to give your PC a real headache.

>Rob
>--
>Rob Henry

That should not be difficult. 30 guage wire is not that small. Just
do something to hold one end in place (punch a couple of holes in the can,
use some glue, if it is a plastic can, heat the wire and press it in the
plastic, be inventive), then wrap the wire on the can in a nice smooth
layor, and fix the other end the same way.

The wire size and spacing will affect the inductance, but if the
design can stand a 100% error in the number of turns (you did say
25-50), I doubt it will make much difference in your application
as long as you are close.

Message-ID: <98@oasis.icl.co.uk>
Source record: 292478

Hi rec.radio readers

I've just acquired a number of hand-held transceivers but unfortunately have no technical data to go with them. They are Johnson FM588 walkie-talkies, made by E.F.Johnson Company (I think in Minnesota). All the crystals have been removed so I don't know how the UHF frequencies (around 453MHz) were derived. I hope to recrystal and tune them up for the 430-440MHz band. Any technical information would be much appreciated.

Thanks & 73

3754. Coil-winding help for Shortwave receiver

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-14 13:23:34 UTC
From: Pete_Simpson@DGC.ceo.dg.COM
Message-ID: <9110141423.AA00036@rtp40.dg.com>
Source record: 292500

Rob Henry asks for help winding a coil for a shortwave receiver. Sounds to me like the film "can" they refer to should actually be one of those plastic containers that a roll of 35 mm film comes in. The trick to winding 30 gauge wire on these is to tape or glue one end of the wire to the can before beginning to wind. Make sure you leave enough hanging free to connect to (assuming you break it a couple of times trying to strip it :-). Nail polish works well, and may even dissolve the plastic a bit, so be careful. If they don't tell you a spacing, they expect the turns to touch. You should, by the way, be using "enamalled wire", which is coated with a brown enamal coating which must be scraped off with a sharp knife before soldering. Wire-wrap wire should also work OK...leave the insulation on. Wind on the 50 or so turns, secure the far end the same way you did the first end, and connect it into the circuit with the free leads you left hanging off the ends. Leave the film can there to provide mechanical support.
MOST IMPORTANT! Let the net know when you get it working!!!
Good luck,
Pete, KA1AXY

I got a chance to open one of these up and ring it out a little. It can be jammed, but it's not easy to do without being obvious about it. Henry's right about detection. By the time you get an alert, you've been read.

The unit must get 10 consecutive readings before it will indicate the speed. It operates in the near infrared with slightly less than 1 mw. The only promising jamming technology is an infrared strobe, a really bright infrared strobe. This disrupts the 10 in a row readings. If you've got cubic money, you might try an anti-reflective coating on your vehicle. You could even do the windshield. Flat black painted panels reduce it's range a little but aren't a cure.

This lidar has to be sited very carefully in the daytime. Specular reflections of the sun blind it very effectively. If you've got a lot of chrome on the front of your car, and you only speed while heading into the sun, you've got a chance of avoiding detection.

>Also, does the "C" suffix add or subtract value from this old tube rig?

Yes, you definitely want the C model and the later the serial number the better. These are wonderful radios, especially the receiver. There are a whole raft of worthwhile modifications available as well including an all new audio section and new voltage regulation circuits, but they work well as is. I've seen them at hamfests for as little as $300 and as much as $800. The later the unit, the more accessories included, and the better the condition, the higher the price will be. Avoid the plain 4 models and the early B models because the receiver is not nearly as good. I still sometimes regret selling mine.

I am forming a Swan Users' Group, and have a classified ad in the latest (Oct. /91) QST asking for interested persons to send me a SASE to my home address: 121 Oakland Terrace, Newark, NJ 07106.
Meanwhile, I have discovered by nosing around that a Swan Users' Net already exists (the ARRL doesn't know of it). It's on 14.250 MHz Sundays at 2 p.m. California time. If, as I hope, this turns out to be an active group, then I will turn into them the names and addresses of those who have contacted me.
You can send me email at my email address (furr@pilot.njin.net), but please send a SASE to my home as well, to get the newsletter of info. I'll be sending out in a few weeks. There'll be a lot of useful info. in it. Meanwhile, try the net.
Best & 73,
Grover Furr aa2gp (ex. call: kb2lub, the one in the QST ad)

3758. Swan 500C info / Dynamotor

Newsgroup: rec.radio.amateur.misc

From: ROBERTT@ukcc.uky.edu
Message-ID: <9110141526.AA27689@ucsd.edu>
Source record: 292502

THANKS to all who gave information on my SWAN 500C - which I am about to give to a friend. I wanted to be sure I wasn't passing on something which might be more of a discouragement than a help.

Consensus seems to be that the Swan is a "good" rig, well worth the little extra TLC one must give it to keep it going. It apparently is very subject to drift, especially if not warmed up and tuned properly. It is much handier with SSB than CW; blows tubes (finals, I assume) rather easily and often, if not handled properly; but...is relatively easy to fix, or get fixed, and performs well - considering its age and design. Sounds a lot better than my first rig....I'm going to pass it on. Thanks!!

New item, about which I'm sure someone has useful info: I just found and "restored" an old WW II 28.5 volt, 70 amp DC generator. It is powered by an old Homelite two-stroke engine and weighs probably 150 pounds. It runs great, but I have long ago disposed of all my old military surplus 28.5 volt relics. How can I get some use out of this thing? Does anybody know where one can still find the old 28.5 volt dynamotors, which would give me a KW or so of 120 AC?

Any information greatly appreciated.

B E A M C A L C

An interesting computer program is BEAMCALC: It calculates
the horizontal and vertical radiation patterns of horizontal
dipol (L/2) antennas.

Thus, it may help you to better understand how antennas work.
You may even use it for the design of your personal antenna.

It takes ground reflection into account.

Required hardware: IBM PC, Hercules or EGA/VGA graphics card

It has been sold several times in Germany and is a low-price
product: DM 89,-- (=50$) + shipping cost.

>This Is The Year Of The Bunny!!

Yes, you can use larger wire. You may have to change the number of turns slightly if there was a specific number, but obviously that is not critical in this application. The important thing is to get the right inductance. Using larger wire will give less resistance and a higher Q which might even be helpful. Gaps matter not at all. K9ALD

3761. wood_masts

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-14 15:19:56 UTC
From: taylor@tix.UUCP
Message-ID: <9110141519.AA02372@timeplex.com>
Source record: 292503

The following previously posted msg has a question relating to wood
vs. PVC for use as an antenna mast:

]Date: 11 Oct 91 14:07:53 GMT
]From: brunix!doorknob!pgh@uunet.uu.net
]Subject: Antenna masts--PVC or wood?
]To: info-hams@ucsd.edu

]I'm about to put up two 30 or 40 foot antenna masts. I've seen PVC
]tubing suggested for the purpose -- it's cheap, light and flexible.
]Wood is more traditional, a little more expensive, maybe more work
](painting, etc.). I've heard that PVC tubing gets brittle in
]sunlight. Does anyone have any experiences either way? If I use
]PVC
]tubing, what diameter should I go for? If I go for wood, what size
]wood (I would guess 16 foot 2x4s)?
]
]tnx es 73 de ka1yne (Paul)
]--
]Paul G. Howard email: pgh@cs.brown.edu
]Dept. of Computer Science phone: (401) 863-7672
]Brown University FAX: (401) 863-7657
]Providence RI 02912-1910 ham: KA1YNE
]
]------------------------------

My past experience in the sixties with wood masts mast was quite successful.
I used 2x4's, lapped the following fashion:

end view

```
______________________ ______________________ _____
__________ ____________________ _____________ |_____|
< 10' > < 20' > < 10 ' > | |
|_|
```

In cross section they form a T, bolted through with 3/8" carriage bolts
and flat washers. This forms a very strong mast, albeit this type of con-
struction has to be guyed at the 20' and 40 ' level.

The wood I used was Sitka spruce, knot free and extremely strong since
this type of lumber typically has very straight grain, light and knot free.
Ordinary 2x4's made from Southern yellow pine, or Douglas fir (which is
what you can usually find at ordinary lumber yards) have more knots
and weak spots that make strength calculations based on the best
case a bit difficult. I have used ordinary 2x4's, but I recall better
results with better grades of lumber. I prefer clear straight grain lumber,

devoid of knots. Performance of wood under stress is similar to fiber glass in that wood is more resilient up to the point of failure. Plastic pipe, e.g. schedule 40 if heated for example is designed to be bent for piping installation. It has very poorer flex tolerance under stress as compared to wood loaded within its limits. Ship's masts on sailing vessels that sustain storms at sea use wood masts. I'm not saying that PVC will not work, but in a good wind storm, 50 -70 mph or more, I'd trust a well constructed wood mast to survive undamaged.

I have had wood masts built in the described manner survive 60 mph gusts, with 1/2" ice coating on a supported dipole, in a January 1961 winter storm with no damage.

Although I haven't been in the market for Sitka spruce lately, I would suggest that one seek out a large regional lumber yard or a place like Constantine Lumber, Bronx, NY, that sells lumber for ship-building. They have at times stocked lengths of up to 22'. I'm sure there are other similar sources throughout the country.

As far as treatment of the wood, painting with a suitable primer followed a finish coat is best. There are available now latex products for both. Also, if one wanted a natural look, I'd recommend Olympic brand clear wood sealer that is a quicker route since only one soaking coat is needed. It has a good water repellency and a linseed oil con-tent that some might prefer.

Seth Taylor , KC2WE, NJ, the content is /my.own/ and not that of my employer.

>Thanks, and 73,
>Dube AB5AP

Glad you asked :-)

As of yesterday, I had in my garage 1 R-390 and 2 R-390A's. I've been doing some reasearch on them lately and so maybe I can shed some light.

I bought my R-390, in "fair" condition, working, for $50. I needed the meters to restore a 390A so off they came. A friend of mine bought a nearly completely restored R-390 at a garage sale this weekend for $25 (sans a few front panel parts), and so I sold him my steaming hulk for $25.

The above not withstanding, I'd say that a very nice R-390 would have to be worth something in the $100 to $150 range. An R-390A, on the other hand, can go for as much as $600, but prices in the $150 to $300 range are more common.

Incidently, at current market prices, these jewels are presently going for around $2/lb. :-)

Good luck, don't hurt your back and be sure and wear steel tipped shoes :-)

>is dual VFO receive on 25-902 MHz (supports Wide mode FM too). It appears
>to come with 2 antennas that attach to 2 BNC connectors. It bosts the
>regular features that Icom offers and has 96 memory channels.
>
>Has anyone seen or used one of these? Since they are advertising it as
>a wide band receiver, does it do a better job of receiving than the W2A
>(after the light+B+#+on trick)? It does look a little weird having two
>antennas.
>
>Steve Kuo, N8OPH, sdkuo@oakland.edu

I have the flyer at home will being it bring it in tomorrow. It is basicly a two meter (32 channel) radio with a 60 channel sanner built in. Separate antenas and will recieve 50 - 905 MHz (modtifiable to 25 MHz) AM, FM, and Wide FM. Plus every few options, most everything that is an option on my 2SAT is now stardard on 2SRA.

3766. Two-Line Orbital Element Sets

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-14 17:20:26 UTC
From: tkelso@galaxy.afit.af.mil
Message-ID: <tkelso.687460826@galaxy.afit.af.mil>
Source record: 292483

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated several times weekly. Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (updated weekly) and some documentation and software are also available via anonymous ftp from blackbird.afit.af.mil in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space and rec.radio.amateur.misc. This week's elements are provided below.

You know, I'm so sick and tired of finding more and more postings on this newsgroup as each day goes by related to the blasting of anyone interested in AM or FM broadcast band transmitting in compliance with FCC regulations regarding unlicensed, low power operations. What is so wrong with someone showing interest in doing so *LEGALLY* ? What is so wrong with that person coming to a newsgroup that, upon first impression, looks to be the most informative as far as obtaining technical help and information? What *IS* so wrong about it is the way this person or persons have been treated in response to his/her questions. It's brought on an onslaught of criticism, blasting, rudeness and unfriendly behavior on behalf of those persons the individual posting the original article had the most faith in for obtaining such information. This is one heck of a way to welcome a beginner to the wonderful world of radio/amateur radio! Granted, there are many hams who couldn't care less about welcoming someone to the hobby. I find that they mainly can be found around 75-80 meters at night. Someone advised this beginner to buy a CB set

and "play" there. Well, as a licensed ham, I find the above mentioned amateur band the next best thing to CB radio and avoid it at all cost. Rudeness, swearing, fighting, interfering with one another on purpose and a total lack of respect for the rules and fellow hams is the norm there. I do recognize that it happens on other bands, too. I have had sensible conversations on 80, so I'm not just blasting that particular group of hams. What I am saying is that many of the responses I've seen here with respect to the original posting appear to be written by those who have no regard for helping or encouraging someone unfamiliar with radio or electronics. Not at all unlike the ruckus and chaos and attitudes I've seen on 75/80 and other bands.
I just wish that those who have nothing good to say keep their remarks to themselves. I can see the point if someone wanted information about pirate broadcasting with more than legal power, on out of specified frequencies, with deliberate intent of disrupting or interfering with legal and established stations. But I honestly think that the individual who I'll just refer to as "Rob" had no intention of doing so. There may have been others in the past with other intentions, but *NOT* this one.

I started out with a Lafayette phono oscillator on the AM broadcast band more than twenty years ago. Am I a bad person for starting that way? (I'm sure I'm leaving myself open to be flamed by those who take offense to this posting.....frankly, I don't give a darn. I encourage other people to make fools of themselves publicly!)
I also have the Ramsey FM kit which I use legally. In my other posting I stated that my operation and use of that kit was not in compliance and exceeded maximum field strength readings due to the height of my average terrain, the type of antenna used and the voltage feeding the kit in combination. I also stated that the kit was not a toy and that FCC regulations had to be read and followed in order for the transmitter to be in compliance. I have corrected the situation with my kit and am now in full compliance with respect to such an operation. The point I wanted to make with the other posting is that it is very easy to exceed the legal limits with that particular kit and not know it fully at the same time! When my signal exceeded the two and a half mile range, I knew it was too good to be true.

I was one of the first to respond to this person about the availability of low power AM and FM broadcast band transmitters. I saw nothing wrong with the question and remembered how *I* started in radio. There's not a single thing wrong with consturcting a Ramsey kit or any other trans-mitter, such as the ones I've seen in Radio Electronics magazine.
Not a single thing! But why does it *HAVE* to be one for the amateur band.(as suggested by some on this newsgroup) Radio is radio. Whatever the frequency. It seems to me that professional broadcasting grew upon people experimenting in one form or another, and I learned a tremendous amount of radio basics by building kits. i guess the real beef here is INTENT. What is the intent of someone wanting plans for a broadcast band transmitter? Well, we can't really say. There are an increasing number of illegal pirate broadcasters these days, but we can't assume that that is the intent. Discouraging someone alltogether and blasting him in the

process is not acceptable behavior from any ham radio operator.
I of course am a professional broadcaster and subscribe to Radio World
magazine. Anyone ever look in the classified section there and see the
hams advertising the 50 watt AM broadcast band transmitters(home brew)
that are tunable to any frequency? What is the purpose of these?
Why is a ham radio operator seling NON TYPE ACCEPTED AM BROADCAST BAND
TRANSMITTERS? To whom is this person selling his wares? Certainly not
to any commercial broadcasting facility! Stew on that one for awhile!

Let's chill out.....do we really have enough hams licensed to the point
where we can openly criticize and discourage anyone else from joining
our ranks? Or lighting the spark that may lead someone to the hobby?
I didn't think so.
Along the same note: our ham club has cancelled any further training
classes due to lack of interest. Our club also has an attendance
problem. Twelve or so is usual. I know of another local club that
draws eight. I can see why anyone interested in amateur radio might
see things in a different light after reading some of the folow-up's
I've seen here on this newsgroup.

Only my opinion(and a few others I know).....
Dave
KA3PGN

there. I've heard it the most there and recognise that it happens on
other bands and that other sensible communication occurs there, too

those persons the individual posting the original had the most faith

|>
|>
|> /s/ Bob Gettys N1BRM - owner of an IC-22U (thumbwheel programmable)

The ones I knew about were the IC-22, the IC-22A, and the IC-22U. The IC-22 looked very sleek and professional. It covered 2 Mhz of the 2m band, normally 146-148. 144-146 could be done with retuning and different 1st oscillator crystal for other-side injection. The IC-22A was made when Icom decided to to "commercial" to the hams. It looked like a Panasonic cheapie stereo (IMHO) and had less performance. I believe it would do 144-148 Mhz, but not sure.

Oh yeah.... Almost forgot the IC-22S, the world's worst synthesized 2m rig since the Heathkit Amateur transceiver/Aircraft band spread-spectrum beacon. The best thing you can do is throw away the synthesizer board and put in a crystal oscillator. They can be made to do 10Khz splits, but you get lousy lock characteristics at the low end. Frequency range is about 144.9 (if you're lucky) to 146.76 when the mod is made. Have a spectrum analyzer handy when retuning. It squirrels easily.

Then they came out with a rather nifty beastie: the IC-22U. Thumbwheel programmable, thumbwheels remotable. A veritable workhorse. I ran one on a PBBS for several years. Well worth picking up. A natural for a remote base.

BTW, anyone know where I can get a squelch pot? Icom doesn't claim to have any.

Anyhoo, if you need the docs for the IC-22, let me know. I still have my manual. It even has schematics!

I am presently looking for the manual for an IC-2F, the grand-daddy of the series. Anybody got one????

73,
Kurt

>services move out.

This is a very interesting subject. Not withstanding the international
legal issues related to RF below ~30 Mhz, the radio spectrum belongs
to the people of the United States. And since this spectrum is a limited
and shared resource, it is the job of government to regulate and
distribute this resource. This was the spirit and intent of the
Communications Act of 1934; to help the many users of the spectrum co-exist
by allocating frequencies and setting standards to limit interference.
The act also implies that what spectrum has not been assigned to government,
business, etc., belongs by default to the people of the US (ie. amateurs).

The amateur bands are not a reserve, a parkland, a gift from our government.
They are what's "left over" after a fair and prudent allocation of
frequencies to all other services. We are a long way from having a spectrum
so crowded that we have to set aside a "parkland" at the expense of other
services. What we currently have is a wastful allocation which robs us
of hundreds of Mhz worth of bandwidth. In particular, there is no excuse
for the vast VHF UHF military bands; even during times of war. The greater
social good is not being served.

Several of us are preparing to file yet another "Request for Rule Change"
asking that several "unused" blocks of frequencies be re-assigned to
the amateur allocation per the Communications Act of 1934 and natural
law. We are also asking (again) that all government imposed barriers
to amateur radio licensing be eliminated (ie. no Morse code or theory tests
except where required by international treaty on frequencies below 30 Mhz).

We expect them to deny this request as in circa 1980, but this time
we have the legal resources to appeal to the US District Court.
We believe that the mood in the federal courts today is such that
we have a chance of getting this heard in the US Supreme Court.
Anyway, 2-3 years will tell. And of course, we welcome any help
or advice form those who want to get involved in this project.
Most are donating 5% of their legal time to this effort.

Speaking of Drake, I have a TR-4C in very good condition, as well as an RV-4C and MN-2000. No... this isn't a sales pitch, just info! :-)

My TR-4C is minus the noise blanker, though it is built to accept one. Can anyone tell me where I might get one of these, or perhaps you may have one you can part with for some reasonable amount? The location this device occupies is just a tube socket with some jumpers in it now. I have no idea what it even consists of!

Also, mods for Drakes have been mentioned as being plentiful here. Can anyone suggest any good sources for Drake mods?

Thanks very much for all info!

> automatically be activated when the detector went off. NIFTY-ASS DEVICE!
> It was a bitch to build though...The Gunn diode was hard to come by.

I know someone who built it too, and got caught. Seems if you are doing
80, and the other folks are all over their brakes trying to get to 55,
the cop WILL notice someone going ~30MPH faster (25 for the sticklers)
even though his radar says everybody is doing 55.

I gave up purposly speeding for long distances. I'm getting my pilots
license. Imagine going 200mph legally for up to 4hours! Plus you
don't have to deal with tailgaters, or slowpokes in the left lane.
If you need to pass there are 3 dimensions not just 2!

I've noticed that by tuning through part of the UHF spectrum on my TV tuner (whose tiny tuning knobs for the channel buttons are not calibrated in any way), I can pick up cellular phone conversations. Neato! Does actually listening (and just listening, not recording or repeating heard information) make me a criminal? Yet? In the US? In Canada?

How are past and present UHF TV channels allocated? Anyone have a handy online copy that they could send me? What parts of the UHF spectrum have been reallocated from TV to other purposes?

Is there a really good small UHF TV antenna that is easily made? Right now I have a loop, perhaps 1ft diameter, made out of flexible wire that I bend to different weird shapes until the station seems to come in best. Not very scientific. Could I do better with some sort of tuned loop or a dipole of just the right length?

Oh, and whatever happened to TV Channel 1? I know it's ancient history, but what frequency range did it occupy, and why was it deleted?

Thanks for your patience...

3783. Major Solar Flare Alert - 14 October

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-14 23:12:26 UTC
From: oler@hg.uleth.CA
Message-ID: <009501D1.B0546000.14039@hg.uleth.ca>
Source record: 292507

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 19:00 UT, 14 OCTOBER

/\

No Impact Expected

MAJOR ENERGETIC EVENT SUMMARY:

Flare Size: Class M6.6/3N Location: S24E34 (Region 6878)
Tenflare: None. Times: Begin=1731, Peak=1738, End=1742

Sweeps: No Type II or IV Sweeps Observed.

NOTES: Although optically large in extent, this flare was impulsive and did
not have any significant radio emissions. Region 6878 certainly did
not appear to be capable of generating a major flare. It is a
relatively simple and somewhat unimpressive region.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

A terrestrial impact from this event is not expected. This event caught
almost everyone by surprise. Region 6878 was not expected to produce
anything more significant than small C-class events. Although another major
flare is not anticipated from this region, the possibility for another
outburst cannot be totally dismissed.

Region 6879 has rotated into a slightly better position today for
analysis. This group also appears relatively simple and certainly is not as
impressive in either white-light or H-alpha as Region 6873 which is presently
the largest and most complex region (beta-gamma) presently visible. The
magnetic character of Region 6879 has not yet been fully explored due to the
proximity of this region to the limb. However, more will become known over
the next 24 hours. Until then, another major flare may be possible, but
appears to be less likely than previously inferred.

3784. Re: Another attack on Ham spectrum?

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-14 23:33:12 UTC
From: allbery@NCoast.ORG
Message-ID: <1991Oct14.233312.17549@NCoast.ORG>
Source record: 292496

As quoted from <1991Oct14.005648.11749@anasaz> by john@anasaz (John Moore):
+---------------
| Likewise, Haller proposes relaxing the rules on public service events.
| Having tried to explain to even staff that we can tell them if someone gets
| hurt, but can't tell them who the first five in the race are, I can say that
| this restriction leads to a significant reduction in the usefulness of
| ham radio, at IMHO a cost to the public in loss of our services.
+---------------

Occasionally, these are one and the same. I'm thinking of an event that happened in March, during the Ohio Winter Rally: we were calling in cars when they passed a checkpoint in a different order than at the previous checkpoint. It paid off: one of the three or four such calls led to our discovering that one driver had wrapped his pickup around a tree. (The driver was unharmed, if you don't count his pride. Or his wallet, since it was a brand new truck....)

When I compared this event to the Alaskan sled race that got some hams into trouble earlier this year, I was more than somewhat worried: overly strict attention to the letter, as opposed to the spirit, of the rules could have meant a person dying of exposure (it was *not* the best of weather that night).

Just as long as relaxing the rules doesn't mean letting the business banders take over... 220-220 was quite enough.

>

I just picked up one of these beauties at a hamfest last weekend. The 2m antenna is a BNC type, but the scanner antenna is an 1/8" type plug. The ham size of the radio has 33 memories, the scanner side 66. I've had no problems with it at all, but I discovered rather quickly that you'll definitely want to get the BP-90 battery back that allows to use 6 AA batteries. My unit came with the BP-82, which lasted me about 4 hours.

As there has been reference made here to the FCC's *suggestion* that the ARRL propose a "Petition for Rulemaking" on how the FCC might alter the "no business" communications rule, I thought it best to submit this report of the matter from the W5YI Report. I have not edited this report; the editing via ellipses shown below appear in the article. I suggest that follow-up posting be made to rec.radio.amateur.policy.

W5YI Report
October 1, 1991
"May be reproduced providing credit is given to the W5YI Report"

Amateur Radio Business Service

FCC "Bombshell" Would Alter "No Business Rule"

In a response to discussions with ARRL officials and a letter from a Michigan amateur, the FCC suggested changes to the "no-business rule" that could have enormous impact on the Amateur Service. Among other changes, the proposal would allow hams to conduct personal and club business over amateur frequencies; to make increased use of amateur spectrum by or for local governments, non-profits and the news media, and would permit payment of teachers to operate amateur stations. Even the long sought after permission to "order pizza" on the air would be granted.

Amateurs now provide some communications for others. But they are supposed to refrain from providing regular organizational or business communications for which landline telephone or cellular systems, business radio frequencies or other services are available. Amateur safety-of-life communications support is permitted, but should stop when the emergency is over or when other radio services should be used - even if the other services would cost money to use.

Those traditional policies would end under the new proposal. The FCC has suggested that the League file a "Petition for Rulemaking" to begin the changes.

Key to the concept is that the Amateur Radio is supposed to have "excess capacity" - more spectrum than it needs - and that the extra capacity could be opened up for non-amateur or quasi-amateur use.

Emergencies would continue to take priority. Regular amateur communications would be classified into nine categories and non-amateur communications would take a secondary status.

The suggested changes are intended to reduce the pressure on the FCC from some net, bulletin and phone-patch operators, "swap shops," volunteer groups, marathon organizers, missionaries and organizations who want more liberal rules about what communications are permitted. The lobbying, letter writing and Congressional inquiries on this subject seem to be having an effect. The changes could transform Amateur Radio into more of a "Personal and Business Radio Service."

Filing ARRL Reports by Packet

Kim Nothelfer (call sign unknown) of Saginaw, Michigan, asked the FCC about filing ARRL Field Organization reports over amateur packet radio. "The report that I am referring to is called the FSD 212," Nothelfer wrote. "It tells the League how many people are available for volunteer emergency service. The explanation to me is that it is OK to do so as long as the collected information is mailed to the league and not sent via Amateur Radio.

"If it is not right to do so, then would it be OK to send the information from one volunteer to another, the information accumulated, and not sent to the League, but kept in our state with our emergency coordinator? This would be from one volunteer to another and never sent to the league.

"I understand that you cannot go so far as to make a list of the do's and don'ts of Amateur Radio. However, we look to you for clarification on this matter. . . . Also, we have to look at the new hams who are coming into packet radio due to the no-code license. I am sure there will be some confusion on their part and we need to help them get started without conflict between the league and 97.113."

The FCC replied, in part:

"Section 97.113 (a) specifically prohibits an amateur station from transmitting any communication the purpose of which is to facilitate the business or commercial affairs of any party. . . . (T)he term "business," in this instance, is used in the broadest context. It includes all types of communications that are intended to facilitate the regular business or commercial affairs of any party, whether individual or organization, whether for-profit or not-for-profit, whether charitable or commercial, or whether government or non- "...In your case, if amateur service frequencies are used to facilitate the collection or reporting of information for the ARRL, then the amateur service is being used to facilitate the regular business or commercial affairs of the ARRL. The use of the amateur service to transmit this information is prohibited by Section 97.113(a) of the Commission's Rules."

Letter kicked off discussions

We understand that the Nothelfer letter kicked off a series of meetings between the ARRL and the Commission about the business rule. The result of those meetings was revealed in a speech given by FCC Private Radio Bureau chief Ralph Haller/N4RH, to the ARRL National Convention in Saginaw, Michigan, August 24. Here are the remarks of N4RH:

"We can't help but be impressed with the pioneering work you are doing with your high-speed systems. Not only are you able to accommodate the influx of new operators, but it appears from what you are telling us, that you have an excess capacity.

"We understand from your letters and phone calls that you are anxious that your excess capacity be used to help alleviate the demands being placed on the maritime frequencies, the common carriers, the public safety frequencies, the government systems, the business frequencies, and so on.

"The existing absolutely-no-business rule, unfortunately, often stands in the way of your helping out. Its well-meaning purpose is to help preserve the character of the amateur service. It is a device to prevent the exploitation of the amateur service. It does, with all the subtlety of a meat axe!

"We know that it is an unpopular rule within the amateur community. Quite frankly, we have always been more than a little uncomfortable with it. As frequency managers, we feel overly bureaucratic when we have to tell you that you must not use your unused amateur service frequencies for non-amateur purposes.

"After all, the real anti-exploitation rules are rooted in your respect for the principles for which your frequencies are made available to you, and by your good judgement.

(Slide shown by N4RH)

Non-Amateur Communications
Suggestions Based on Requests
Secondary Usage

o Parade logistic support
o Non-profit organizations
o Government agencies
o Public safety agencies
o Classroom instruction
o Sell apparatus
o News media information
o Club business
o Personal business
o NOAA, WWV, etc.
o Other?

"We have suggested to your League Officers, therefore, that they consider the possibility of asking for rule making to allow your excess capacity to be used on a secondary basis for certain non-amateur communications.

"This catalog was compiled from your letters and phone calls over the years asking for permission to use the amateur service frequencies for non- amateur communications.

"Obviously, your non-amateur communications would have to be limited to only those areas where the FCC regulates communications because of the prohibitions in the International Regulations. Domestically, however, you might use your frequencies to provide logistical support for a parade, race, marathon, or similar gathering;

"You might provide communication assistance to a non-profit organization, charitable organization, or public-safety agency;

"You might participate more fully in governmental systems like Skywarn;

"You might help provide classroom instruction in schools;

"You might sell or trade to amateur operators electronic apparatus;

"You might conduct your radio business over the air;

"You might conduct your personal business, including ordering pizzas;

"You might provide information to the news media, including broadcast stations, newspapers and magazines;

"You might also rebroadcast programs like the NOAA weather, Voice of America and WWV.

(Slide)

Precedence
Amateur Service Frequency Usage
Suggestion based on Section 97.101

o Priority
Providing emergency communications

o Primary
Conducting amateur communications

o Secondary
Conducting non-amateur communications

"Providing emergency communications would continue to have the top precedence. The primary usage of your frequencies, moreover, would continue to be your regular amateur service communications. When, and only when, those two traditional usages are insufficient to completely

occupy your bands, the unused frequencies would be available to you on a secondary, non-interference basis, to carry on non-amateur service communications.

(Slide)

Providing Emergency Communications
From Part 97, Subpart E

o Operation during a disaster
o Safety of life
o Protection of property
o Station in distress
o RACES (except drills)

"The number one priority is covered by Subpart E in your rule Part 97. For some 42 years, providing emergency communications has been at the very top of the list of purposes of the amateur service in the United States. There would be no changes in these rules.

(Slide)

Amateur Service Communications
Primary Usage
From Section 97.503

o Rules
o Station Operating procedures
o Radio wave propagation
o Amateur Radio practices
o Electrical principals
o Practical circuits
o Components
o Signals and emissions
o Antennas and feed lines
o Other?

"The primary usage of the amateur service frequencies is also treated in part 97. This list should look familiar to you. These are the very topics about which you had to learn in order to pass the exams for your license. Exchanging ideas on how to best operate an amateur station would continue unchanged.

(Slide)

Business Rule
Prohibited transmissions

(Suggestions based on Phil Karn/KA9Q letter to QEX and ARRL)

o No amateur operator shall sell a communication service that uses amateur service frequencies.

o The control operator of an amateur station may accept compensation for periods of time during which the station is transmitting:

- Morse practice
- Information bulletins
- Classroom instruction

"We have been talking with your representatives about the best way to codify a new rule. This suggestion is based on a letter that appeared in your QEX magazine. It would simply state that "No amateur operator shall sell a communication service that uses amateur service frequencies."

"The exception for W1AW to pay its control operators would continue. It adds the new exception that you want to include for classroom instruction.

"The quantity of secondary communications your systems could carry would be determined by several factors. For instance, the excess capacity of your systems in your specific locale would be an important factor. Providing communications for a race in Alaska is an entirely different situation than it would be if the race were held in a more densely populated area where more stations engage in amateur communications.

"This approach may also help solve some of the problems you have been having in managing your high-speed automatically controlled systems. You would be able to transmit, on a secondary basis, the type of messages that gave rise to the unfortunate incident on your packet system earlier this year.

"I hope you will give this suggestion your careful attention. You could be of great assistance to those in need of better communications, and properly implemented, this approach should have no adverse effect on what you are now doing."

(End of Haller speech)

And end of news article from the October 1, 1991 W5YI report.

> in it?

For optimum Q, you should space the wires one diameter apart. This
can be done by winding a pair of wires side by side, then coating
them with a little glue to hold them down, and after the glue dries
peeling away the excess winding. I am assuming that Q matters or
you wouldn't have been asked to use such a large winding diameter.
Uniformity of winding tends to influence Q as much as or even more
than wire size. This is why factory made inductors such as mini-ductor
outperform most homemade ones. The other factor is the continuous
presence of the lossy plastic in the film can next to the windings.

In rec.radio.amateur.misc, john@edsi.plexus.COM (John Moder) writes:

> found out the freq's for the VHF marine band. they are....
> channel 1 156.05 Mhz
> each channel after that add .05

Yes, but there are higher numbered channels in between those
at 25 kHz. spacing so that you have

ch. 29 156.025
ch. 1 156.05
ch. 30 156.075
ch. 2 156.1
ch. 31 156.125

etc.

Don't quote me on whether 29 is the first of the "new" channels,
but it's something like that. The band started at 50 kHz. spacing
and was subdivided into 25 kHz. channels later without renumbering
the original channels. Hence the weird mapping of channel number
to frequency.

Re: using PVC for antenna supports.

I, too, have found "normal" PVC tubing (schedule 40 - the white
stuff that you see at every hardware store) is too flexible.

The best route I've found is to use the PVC electrical conduit.
It's easily distinguisable from schedule 40 by its grey color.
It is much more rigid than common plumbing PVC. If you chose sizes
carefully, you can slide smaller diameter ones in larger ones,
reinforcing it. I've used a 10' piece of the 2" stuff successfully
as a radome for a UHF collinear. It's weathered very well so far.

Message-ID: <53407@netnews.upenn.edu>
Source record: 292513

Just out of curiosity, what have you found to be the best way to seal RF connectors on antenna systems? I've used almost every techinuqe I've heard, including Coax Seal, ScotchKote (sp?), vinyl "boots" like Cushcraft sells, RTV, black electrical tape, black electrical tape sprayed with clear Krylon, and a few others. So far, I've had the best success overall with Coax Seal. The electrical tape and Krylon _usually_ works very well, but seems dependent on the quality of the electrical tape. Some varieties tend to become hard and end up cracking, while some stay flexible and do an excellent job. The only thing I don't like about Coax Seal is that it's a pain to get off when you recable antennas.

I've found RTV to be about the worst. I've tried clear (aka GE Silicon), white, black, and the "Ultras" that supposedly are non-acidic. None of themworked particularly well.

How about opinions from the masses?

The microwave carrier undergoes a significant doppler shift due to your velocity, The AM sidebands undergo the same proportion of shift, so the signal at the diode mixer in the radar gun is your carrier, shifted, and a pair of AM sidebands at very very slightly different offsets to the modulation freq used in your calibrator. Doppler effect has shifted your carrier frequency but has had only a miniscule effect on your modulation frequency. So there is no need to take into account your speed, unless you want to calibrate the radar *very* accurately :-)

This is all a theoretical game if anyone going obviously fast can be booked by calibrated eyeballs. The only defence is never to be the fastest, let some fool be the cannon-fodder. Another good use for the gregarious instinct !

>Some time ago I saw an ad for PCB film that can be used in a copier.

The problem with this is that copiers do not produce an exact sized copy of the original, even when you 'ask' for 100% copies. I believe you get about a 102-3% sized copy of the original, so if you're copying PCB layouts, things like pads and so forth may be too large and/or too far apart.

On the other hand, perhaps I haven't the faintest idea what I'm talking about! (Hell, I only write software.)

Regards,

Hugh, G0CNR.

Hi,

Looking for some opinions on HF multiband antennas. Been reading up on these antennas and trying to decide between a Yagi and a Quad.

I have found information that seems to say the Quad will probably outperform the Beam, but maybe not.

Any recommendations for brands-the ones I have come up with so far are:

1. Yagis-Mosley, Cushcraft
2. Quads-Lightning Bolt (Does anyone know someone who has one or have one?)

Thanks for any help

>Gary KE4ZV

Thanks, Gary. I've been waiting for someone to bring this up. Those of
you who seek to fool radar so you can get away with unsafe driving, do so
at you own risk. On the other hand, if you're opposed to radar use as a
"revenue enhancer", why not work to get some of the ridiculous traffic
laws out there (especially unreasonable speed limits) repealed? You can
help by joining the National Motorists Association, located in Dane,
Wisconsin. The NMA started out as an anti-"55" outfit, but is starting
sto branch out into other traffic law, safety, and education areas.

I've also noticed that the NMA seems to have a relatively high ham/member
ratio. I have no other connection with them other than as a satisfied
member who agrees with their philosophy.

>frequencies to business and government entities; leaving "emergency
>communications" and other amateur activities what's left. Under that
>scenario, "other amateur operations" would be considered secondary to
>emergency comm, and therefore at the bottom of the totem pole when it comes
>to who gets what. Has anyone else heard of this? Or is it a hoax? Is it
>rumor or is it truth?

This was written up in the 1 Oct W5YI Report. I'm surprised that no one
brought it up before now.

What Dube says about the proposal is essentially right, except that the way
I understood it, business communications would be "the bottom of the totem
pole". Emergency comm would have first priority, then "normal amateur
communications", then business.

Maybe someone with access to the whole article could post a summary to
the policy group, where further discussion of this belongs.

I strip enameled wire by cooking the insulation off with a
soldering iron. It also has the side effect of tinning the wire.

I have just finished a design for an interface which only requires 13.8V
power (or 5V is you have it available) two chips (and the optional 5V
requlator), 5 capacitors, 1 resistor. It meets the RS232
specifications. The +- voltage is obtained by an IL232 chip which takes
5V in and produces +- 10 volts and it includes Rx and Tx opamps which
meet RS232. It works fine with my IC735 and on my three computers. I
will post it tomorrow. I have to "draw" the circuit in ACSII :-).

I advised Rob to buy the CB sets and "play there". He said he
wanted to build a radio to talk to all his friends at once, in a
few block radius. I thought it over and decided what his most cost
effective solution would be. Also, by buying a working radio, he
can get started in radio without the frustration of getting a
home-built kit working. I was trying to be helpful and pragmatic.

I can see my suggestion offended Dave. Sorry. I guess I don't
view CB as poorly as Dave does.

WANTED: INFORMATION ON THE CQWW CW Contest, 23/24 Nov 1991

We are a small Radio Club in Scotland, UK. We have not been active contestors in the past but are becoming more interested. We would like to participate in the CQWW CW contest next month, if only to submit check-logs. This may lead on to bigger and better things!

The problem is we have no contest rules, can anyone help please? Any rules, hints, tips etc would be appreciated. Please reply, email or FAX.

Thank-you in advance.

>David@moe.ece.utexas.edu

Take two 1/4 electrical wavelength pieces of 75 ohm cable, RG59 type,
and connect one from each antenna to a common T fitting. The 1/4 wave
transformers will transform the 50 ohm base impedance of the antennas
to 100 ohms. Connecting the pair of now 100 ohm loads in parallel via
the T will give you 50 ohms at the third leg of the T. This is the
way CB "twin trucker" antennas are matched. And for those of us who
find that example beneath us, that's also the way crossed yagi satellite
CP antennas are matched.

Source record: 292525

I have encountered this problem with copiers, as well, although not in relation to making pcb artwork. The compounding problem is, some copiers make the copy a little -LARGER-, some a little -SMALLER-. It's a pretty easy matter to fiddle with a copier that gives you 1% incremental zoom-up/zoom-down to get close, although once when making copies for a poster my daughter was preparing for school, we found the copier at hand made the copies too -big- at greater-than 99% original size,and too -small- at less-than 99% size--no match! (We made do.)

Good luck--you'll probably be able to get close enough "for all practical purposes."

>thing I don't like about Coax Seal is that it's a pain to get off when
>you recable antennas.

There's a rubber-like tape product called "self melting tape" available
from most large electrical supply houses. Stretch it and apply it in a
even half lap layer over the joint, then cover the entire joint with
Scotch Brand Electrical Tape (accept no substitutes). This will give
a nice weather tight joint that is easy to undo when that becomes
necessary. Coax Seal is a messy pain in the rear that is difficult to
remove, and unless it's applied just right, doesn't give a really good
seal, especially if you are faced with wide temperature extremes.

Self melting tape, and self melting sheets for the really big joints,
are used by the power industry to seal connections in underground
wiring vaults subject to flooding. The Scotch electrical tape will
last outside for several years.

>I've found RTV to be about the worst. I've tried clear (aka GE Silicon),
>white, black, and the "Ultras" that supposedly are non-acidic. None of
>themworked particularly well.

RTV is the pits. Most of it is corrosive, and none of it gives a weather
tight seal under exposure to UV and temperature extremes. It's bathroom
caulk and should be left there.

depolo@eniac.seas.upenn.edu (Jeff DePolo) writes:
>Just out of curiosity, what have you found to be the best way to seal
>RF connectors on antenna systems?

What we use for HF, VHF, & UHF on the boats is so-called
"self-vulcanizing rubber" tape (Scotch 23) overwrapped with black PVC
tape. The rubber stuff forms an air-tight, form-fitting boot over the
entire connection, sealing out the seawater, and the PVC protects the
soft rubber from UV. If the installation is going to be in for a long
time, the above wraps would then be coated twice with scotchkote.

I think the rubber is better than Coax Seal because it can be removed
from the connection leaving no trace. I know a friend who uses black
PVC tape, then Coax Seal over that, so that it doesn't gum up the
connectors when he has to disconnect them. Your choice...

Of course, N connectors are always indicated for outdoors use. If you
must mate to "UHF" connectors, I recommend silicone-greasing and
permanently sealing a UHF-to-N adapter and dealing with only Ns.

>
>Phil

There have been several responses in this vein; and I agree that some of the restrictions are needlessly strict. However, there is something about the announcement that concerns me, and that is the apparent move to load up the amateur bands with other, non-amateur activity. My reading of this is that we, in effect, would be trading spectrum for the ability to "order pizza".

Here I will quote the article that piqued my interest and got me worried. Perhaps I've read something into this that was not intended. If so, then nothing but good can come of it. If not, then we all have something to think about. Here's the article as I received it:

"BUSINESS ALLOWED ON HAM RADIO?==========FROM THE W5YI REPORT
"In response to discussions with ARRL officials and a letter from a Michigan Amateur, the FCC suggested changes to the 'no-business rule' that could have an enormous impact on the Amateur Service.

"Among other changes, the proposal would allow Hams to conduct personal and club business over Amateur frequencies; to make increased use of Amateur spectrum **by or for local governments, non-profits and news media** (emphasis mine), and would permit payment of teachers to operate Amateur stations. Even the long sought after permission to "order pizza" on the air would be granted.

"...The FCC has suggested that the [ARRL] file a Petition For Rulemaking to begin changes...

"Key to the concept is that Amateur Radio is supposed to have 'excess capacity' -more spectrum than it needs- and that the extra capacity would be *opened up for non-Amateur and quasi-Amateur use* (again, my emphasis). Emergencies would continue to take priority. Regular Amateur communications would take a secondary status.

Several folks suggested using a JPole and one kind soul sent me construction details. I built it and it seems to work well hanging on the wall of my house but I'm not sure how I'm going to mount it on the bike. I've also acquired a GE 1/4 wave whip and am looking at mounting it on a small aluminum sheet hanging off the back of the rear rack.

3817. Yaesu 470 problem

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-15 16:00:36 UTC
From: brian@nucleus.amd.com
Message-ID: <1991Oct15.160036.24856@dvorak.amd.com>
Source record: 292532

My Yaesu 470 has decided that it is a simple one-memory dumb radio.
I'm looking for anyone who has had similar problems with their 470.
Here's a summary of what I know so far.
* I had done the simple up-arrow/down-arrow power on reset to extend
the 2m receive coverage
* I had done the "trick the radio into tuning above 450MHz and store
it into a memory" extended 70cm receive mod
* I've used the hyperscan mod a few times
* My radio is one of the earlier 470's, serial 9G101675
* Yesterday, I turned the radio on while holding it and an home
built attenuator. When it didn't work, I looked at it only to
find that my finger was dangerously close to the up & down arrow
keys. I probably had them depressed when I turned the radio on.
* Now the radio comes up with all memories (in both bands) masked
except memory number one. I can manually un-mask them, but the
power on reset (up arrow & down and power on) turns them back off.
* The power on reset still toggles the receive range in the 2m band.
* The radio does not automatically set the repeater offset now, but
the RPT button still works.
If you've seen anything similar on your 470, I'd sure like to know
about it, especially if you know how to get it back to its original
state.

Send e-mail if possible, I will summarize to the net on or about
Monday the 21st.

CQWW SSB

Members of the Bavarian Contest Club will be active from
Cyprus and the Turkoman Republic in this year's CQ WW
DX Contest Phone.

- DL4MDO, DL4MCF, DK6WL and DL3MFZ will be active as 5B4BCC
from the North West coast of Cyprus. They will enter the
contest in the Multi/Single Class. QSL cards will be
handled by DL4MDO. Before and after the contest, the
group will be active on the WARC bands and on RTTY.
QSLs here via the OPs' home calls or via DL4MDO. The
QSL Bureau is the preferred way.

- DK2OY, DF7RX, DL4GBA, DK4VW, DF9LJ, DL1GWS and DL6RAI
will travel to Moscow to meet another group from
Voronesh (UA3Q) next Saturday (19thh October). Together
the two groups will fly to Turkoman Republic (UH)
to operare CQWW as a Multi/Multu enty from the QTH of
UH8EA. The callsign RH2E (not RH3E) will be used during
the contest. Before and after the contest, the OPs
will be QRV signing their home calls '/UH8E', '/RH3E'
etc. on the WARC bands and on RTTY. Some of the
RTTY equipment will remain at the QTH of UH8EA when
we leave. QSLs for RH2E to DF7RX, all others either to
the OPs' home calls or also to DF7RX.

I hope to hear some of you during the world's biggest and
best contest!

73 Ben, DL6RAI

The following is a list of informational files that can be obtained from
the Supplemental Archives for this newsgroup at ftp.cs.buffalo.edu
(currently located at IP 128.205.32.3 or 128.205.36.1). Note the addition
of the file antenna_refs which contains references for HF antenna designs for
small spaces.

Questions to bowen@cs.buffalo.edu

ampr_coordinators - coordinators for packet IP addresses
antenna_refs - references for articles about antenna designs
arrl_bib - bibliographies from ARRL literature (ASCII format)
callbook.tar.Z - sources for the marvin callsign server v1.2
carf.db_fcc.Z - Canadian ham database in FCC format
carf.db_orig.Z - Canadian ham database in original format
docket_91-36 - information regarding the proposed scanner regs
elmers_admin - information about the elmers list (see below)
elmers_list - list of elmers on the network
exam_ops - info on exams and exam opportunities
faq1 - beginning amateur radio questions
faq2 - "where can I find ..." questions
faq3 - amateur radio organizations and publications
faq4 - common advanced and technical questions
florida_antenna - Florida State antenna law info
guide2newsgroups - description of USENET newsgroups dedicated to radio
hamstacks - information about the question pool stacks
hf_rigs - QST reviews of available HF rigs
ht_info - general information about commercial hand helds
intro_to_swl - info for aspiring short wave listeners
intro_to_scanners - info for aspiring scanner listeners
mail_order - a database of electronic mail order shops
new_packeteers - helpful essays for new packeteers
newcomers - tips and hints for the newcomer
packet_clubs - organizations you can get more packet info from
packet_faq1 - the basics of packet radio
packet_faq2 - Internet resources available for packet
packet_faq3 - networking protocols for packet
phone_bbs_list - phone BBSs for ham related issues/software
qst_prodrev - index of ARRL product reviews in QST
qsl_bureau - information about the ARRL QSL bureau
sol_geo_data - desciption of daily solar geophysical broadcasts
sol_terra_terms - glossary of solar-terrestrial terms

Thanks to Ed Hare, KA1CV, at ARRL HQ for providing the antenna file and to
Devon Bowen, KA2NRC, for providing disk space and maintaining the archives.

Yes, there is a certain knack for winding coils, but since it only comes from practice, jump in and give it a try. I suggest you cut a notch or drill small holes to anchor the start of the winding. You might also have a few small pieces of electrical or masking tape handy. Keep the wire tight as you wind it so it will not slide about out of control.

When the desired number of turns has been made, coat it with a layer of glue and let it dry. At one time, there was a special cement called coil dope which was made just for this purpose. I expect that it is now an endangered species. :-(

Enjoy your work. Remember it is a hobby.

I have had a lot of success using insulating rope caulk made by DAP. It is in a red box at most hardware stores and outlets.

It forms an air tight seal, is easy to work with and comes off easily, compared to *coax* seal. Also, it works great on difficult connections which can not easily be taped.

In the United States, any form of listening to cellular telephone is a violation of an act passed by Congress a few years ago at the request of the cellural industry. As you have discovered, it gives an illusion of privacy. I understand that part of the testamony against that law was a demonstration of reception with a UHF TV. Alas our legislatures are mostly lawyers and think they can pass laws that supercede the lays of physics! :-(Perhaps the Canadian Parliment does not have that illusion.

>Oh, and what happened to channel 1?

Channel 1 would be 50-54 MHz. At least in North America, that is the 6 meter Amateur Radio Band. This decision was made around 1945-1950.

Regarding electrical tape: The quality sure does vary. Stick with Scotch 33 which is carried by all decent hardware and electrical supplies.

My preference is to wrap tape on the the connector and then cover it all with RTV or silicon-acrylic caulk depending on what I have handy.

|> laws governing Doppler shift automatically cease to apply if I move
|> the emitting device into an automobile?

The doppler principle is not voided by this seeming anomaly. Jammers
(or "calibrators") work by simulating a valid doppler return signal to
the receiver.

A jammer for speed radar is simply a transmitter operating at the
approximate frequency of the radar itself, which is pulse or AM
modulated at a deceptive rate determined by intended velocity
and the carrier frequency of the transmitter (X-band, Ku-band, etc.).
These rates, it turns out, require modulation well within the audio
band and are easily achieved with a simple 555 timer (the Gunn diode
transmitter is the expensive piece of the setup).

The front end of a speed radar is usually a non-linear AM detector which
both mixes the received signal with the transmitted signal (thereby
extracting the doppler shift) and detects (AM demodulates) the received signal.
The AM detection process is usually fairly wideband, or susceptible to jamming.
If you inject a falsely modulated signal at a much higher strength and
close enough to the original frequency of the reflected signal, the
false signal's modulation will overcome the valid doppler return and
the radar will decode the false modulation as the true doppler return
(and deceptive speed). Although the relative speed of the auto in which the
jammer is mounted will affect the carrier frequency as seen by the receiver,
the deceptive modulation rate will only be shifted by the doppler equation
applied to the deceptive audio frequency. This will be less than
.001 percent of speed at mortal rates of travel.

>includes all types of communications that are intended to facilitate
>the regular business or commercial affairs of any party, whether
>individual or organization, whether for-profit or not-for-profit,
>whether charitable or commercial, or whether government or non- "

I think that while present rules and/or interpretations might be
relaxed a bit, one key phrase for me that should be retained is
"REGULAR business or comercial affairs"

For example, with fire departments and rescue squads, virtually ALL
of their communications deals with emergencies. Since that is routine
(or "regular") business, they should not be taking up ham channels for
that. Under some unusual circumstance (disaster, equipment failure)
then using hams for communication would be justified.

Likewise, when providing communications for special events such as
bike century rides or parades, the key phrase is "special", where
it would be unreasonable to require a non-profit group to buy a
network's worth of comm gear to be used just once a year.

For "Pizza orders" I would argue that the ham making the order doesn't
have any pecuniary interest. Ham radio isn't the pizza shop's regular

means of getting orders, and they do nothing to encourage it, unless they advertise something like "monitoring 146.52", so it should probably be ok.

Just my reaction to the "proposed proposal"

Source record: 292548

FOR IMMEDIATE RELEASE October 14, 1991

DXAC Rejects Jarvis Island Petition

The DXAC voted uanimously against recommending new DXCC country status for Jarvis Island. The results of the vote were reported to HQ last week.

The petition was filed with the DXAC by Pete Grillo, AH3C, Martti Laine, OH2BH and Wayne Mills, N7NG. Petitioners cited Point 3(b) of the Countries List Criteria, separation by another DXCC country. The petition claimed separation based on economic zones. The DXAC ruled that this was not in accordance with the current DXCC rules.

How bout' a rhombic?

Unterminated, of course.

The question leaves out a lot of specifictions. Horizontal or
vertical polarization? Narrow or wide beamwidth? Are you trying
to maximize radiation or reject side interference?
You can do a lot with a collinear dipole array on either side of
the mast in the case of vertical polarization and not caring much
about side lobes.

>David@moe.ece.utexas.edu

I would think that two full wave loops (impedance about 100
ohms) connected by a one half wave length transmission line
(independence makes no difference but I would use open wire so the
the physical and electrical half wave length would be pretty close
to equal. This would present about 50 ohms at the feed point of
either loop. But I don't know what the pattern would be. I think
the whole thing could be made out of a single length of heavy gauge
aluminum wire.

I didn't see the original post but I used to own a crystal version IC-22
(but it might have been a IC-22A.) The 22S was the other one you were
thinking of, which was diode programmable. I think the 22U had little
pushbuttons that acted as thumbwheels.

The Ohio/Penn Dx Packet Cluster
DX Bulletin No. 031 (OPDX.031)
October 14, 1991
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn Packet Cluster Network, K4CEF & the Southeastern Packet Cluster Group, ARRL Bulletins, QRZ DX, WB2CVL, K3BEQ, WB8HIW, KQ8M, W8QWI and W8XD for the following DX information.

3B7, SAINT BRANDON ISLAND. Jackie, 3B8CF, is now QRT from here. QSL to his call book address.

9L, SIERRA LEONE. Dave, 9L1US, was heard saying that he will begin tearing down his antennas the first of November, following the CQ WW Contest.

P5, NORTH KOREA. It is reported now, that Romeo is definitely NOT going to P5 at this time. He and the other operators who just operated from XY, 1S and 3W are much too tired and they need a rest.

S2, BANGLADESH. Things are looking up for this one to be active soon. From the W1AW ARRL Bulletins, it was reported that the Bangladesh Amateur Radio League, BARL, announced regular licensing of operators has begun in S2. The first two licenses were issued to BARL President Saif Shahid, S21A, and General Secretary Nizam Chowdhury, S21B, on Oct. 5th. Six more licenses are expected soon. Probably the next licenses to be issued will go to Jim and Kirsti Smith, VK9NS and VK9NL, and Eric, WZ6C. It was also mentioned this week on W2MIG's Net, that no authorized amateur radio operation has been permitted since the Jim Smith operation.

T2, TUVALU. Bing, VK2BCH, is now QRV from Tuvalu as T20XV. He plans to be active for several weeks. QSL to home callbook address.

XU, KAMPUCHEA. XU0JA will be active thru October 16th. Most of the activity is on CW (around 25 kHz up from band edge). QSL via JA1NUT. The Southeastern Packet Cluster Group reported hearing and working a XU1U. It is undetermine whether this station is part of the XU0JA group or a SLIM (he did say QSL to JA1UT).

YA, AFGHANISTAN. Jackie, F2CW, will be returning to YA on October 19 with a vertical antenna. His callsign will be YA2CW.

YV0, AVES ISLAND. A DXpedition to Aves Island is planned to start about November 5th. Duration is reported to be about 2 weeks and the callsign reported will be 4M0PV.

ZA, ALBANIA. A lot has been said about ZA over the past couple of weeks, so I will try to keep it short. The ZA1A international group went QRT, on October 7th. Their totals for contacts were reported to be over 70,000. At this time ZA1A is the only station that has sent documentation and is approved for DXCC. The ZA1QA and ZA1HA still continue to be active as this bulletin was being written. The French group operated as ZA1ZMX, ZA1ZXV and ZA1ZVX for 5 days and went QRT on Friday. Also, another new ZA showed up on 28480 kHz around 1800z this weekend as ZA1DX. Zoli, HA5PP, who was the operator, said QSL to P.O. Box 200/66, Budapest, Hungary. Begin looking for the 12 Albanian students who graduated last week from the ZA1A group. (ZA1TAA thru ZA1TAL)

ZL8, KERMEDEC ISLANDS. Ron, ZL1AMO, is supposed to be active from Rotuma as 3D2RW, but has not been heard since October 7th. He is working very hard on a ZL8 DXpedition slated for around March.

THE FIRST QSL DXPEDITION. In a phone conversation with Bob, WB2CVL, he reported to the OPDX that he will be traveling to Moscow on Dec. 23 for the purpose of obtaining 400 XY0RR QSL cards. His plan hinges on approval from Romeo, UB5JRR. Bob is looking to take calls and cards from a maximum of 400 stations interested in participating in this project. He plans to gather the cards from those stations and personally deliver them to Romeo and return with validated QSL confirmations. In addition, Bob will donate some blank QSL cards to Romeo to help expedite the QSLing process for these much sought after QSL cards. Donations to cover transportation and QSL costs will be essential to making this project possible. For further information Bob can be reached at 908-846-2056 if your interested. Bob feels he will have an answer from Romeo sometime this week and needs to finalize his list.

SOUTH ATLANTIC CRUISE. Ken, WB8HIW, was informed by F6EWE, that a group consisting of F6EOZ and others (doctors, geologist, scientist), will be cruising the South Atlantic on a boat called Antarctica. They will be at sea for approximately one year and plan to stay at least one week at various rare islands. Some of the islands mentioned are Peter I, Bouvet and South Sandwich. Details are still sketchy, but the general purpose of this expedition is the preservation of the Antarctica natural resources.

STATIONS SLATED TO BE ACTIVE IN THE CQ WORLD-WIDE SSB CONTEST.
(Compiled from some rumors, nets and QRZ DX Bulletin)
4K4ZI (QSL to K4RKI), 5B4BCC (QSL to DL4MDO), 5V7JG (by F2JD), 6I2A (Mexico! by several of the XE gang), 8P9Z (by K3KG, K3ZR, K4FJ, 9L1US (QSL via WA8JOC), 9M6NA (by JE1JKL), C6AFQ (by K1TN and WB2CHO), C6AFT (by AA5NT--will sign AA5NT/C6A before the contest.), CT3M (Madeira by OH2MM going for a World Record Single Op score. Well, as they always say, it's not the callsign itself so much as how
well you use it.

And now that the FCC has turned the issuing of callsigns over to a commercial
concern, and has ruled that callsigns are the property of their holders,
I will now announce that mine is for sale.

We will start the bidding at $10,000...

(there, that should keep the Usenet rumor mills going for a while :-)

Oh bloody hell...

And you wonder why the IRS refuses to guarantee the accuracy of their
over-the-phone tax advice.

For quite a few years, you may keep whatever callsign you have presently,
REGARDLESS of whether you move or upgrade your license class. This was
emphasized after the callsign reorganization in 1978. Time was, you could
get an issue of a "like" call (i.e. 1x2 for 1x2, 1x3 for 1x3) if you
moved callsign areas. The FCC abandoned this practice in the mid-70's,
citing lack of funds to handle the paperwork burden, and decided it was
easier to let people keep their "preferred" (but out-of-area) calls to
begin with.

The form to handle all transactions on your amateur license, to include
changes of address, is the FCC Form 610. You can get one by sending
a SASE to the ARRL, 225 Main St., Newington, CT 06111.

Oh, and here is the secret trick to avoid a callsign change:

DON'T CHECK THE BOX MARKED "CHANGE CALLSIGN" !!! :-)

Fill it out, make sure to sign it and attach a copy of your present
license (or a brief letter of explanation for its absence, i.e "my
dog ate it"), drop it in an envelope, and address it to:

The Federal Communications Commission
P.O. Box 1020
Gettysburg, PA 17326

Turnaround time for a new license is a few weeks. I understand it now comes in a smart-looking laser-printed 2-part form, a certificate for framing, and a wallet-size card.

Good luck!

> Jerry, K1MER

A friend of mine is N3FUU. Pennsylvania DOT refused to issue him call sign license plates, saying that it was "offensive". The FCC refused to give him a new call sign unless he upgraded. He was finally able to convince the DOT that it wasn't meant to be obscene - the FCC issued it, it has to be OK. He uses the phonetics off the air of "N3FU twice".

One guy in the area, W3DBZ used to use "W3 Dead Black Zombies" until he got a you've-been-bad note from the FCC. Guess they thought it had racial overtones, although that's not what he intended.

Also know N3GWG: Need 3 Good Willing Girls

Lots of other examples abound, but most of them that I can think of are never used on the air, hi.

Can't think of anything for a weird callsign like mine. If it only had a K in it, too, it would have all 4 US prefixes.

3852. 8088 or 8086 Microcontrollers

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-16 07:24:16 UTC
From: barker@wd0gol.WD0GOL.MN.ORG
Message-ID: <230@wd0gol.WD0GOL.MN.ORG>
Source record: 292462
Cross-posted to: sci.electronics,rec.radio.amateur.misc

I'm looking for a Microcontroller based on either the 8088 or 8086
for a project I've got in mind. The reason for looking for an
808[86] based uController is that I'd like to be able to put both
BIOS and DOS on it in ROM.

My only alternative if these aren't available would be to find a
source for cheap mini-XT motherboards (size is an issue).

Processor speed isn't important (anything >DC should work :-)
but it would be nice if it had a built-in serial port and possibly
a disk[ette] interface.

Does anyone have any ideas on sources for either of these?

Thanks!

>Just out of curiosity, what have you found to be the best way to seal
>RF connectors on antenna systems? I've used almost every techinuqe

We have a climate here in Finland that simply demands good sealing of
the connectors that are installed outside. I usually wrap two layers of
self-amalgamating rubber tape over the connector and then cover the
whole thing with PVC electrical tape, as the rubber tape does not
tolerate UV light. As Jeff said, this kind of package is a pain to
open, but I have opened connections more than 10 years old sealed this
way and the connectors have been like just bought in the store. There
are several ways to apply the PVC tape so that it hold well for several
years.

I also have something to do with commercial installations. Also there
we use the abovementioned method. In some places we have used that kind
of heavy shrink tubing that has heat-glue inside instead of PVC tape.
However, that method is not very well intended to be opened every other
year...:-)

Oh, "Sweet Pea" is just the local nickname from an OF who refused to talk to me at first (I think he was afraid of ladies). It stuck, though, and is used over all the other acronyms I've thought up.

Course, I have to tell you about my first THOUGHTS about my Advanced callsign. See, I'm a pilot, and I was thinking....what would be a good callsign for a pilot. Knowing they were in the KC1Sx's at the time, I thought, "Gee, I hope I get KC1SP, then I can be 'one super pilot'." The very next day, my callsign arrived and GUESS WHAT I GOT????

Cheers!

3857. IC-2410 out-of-band (not really) transmit mod needed

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-16 12:33:42 UTC
From: ker@cbnewsj.cb.att.com
Message-ID: <1991Oct16.123342.24583@cbnewsj.cb.att.com>
Source record: 292568

I'd like my IC-2410 to be able to transmit in the 430 MHz of the 70cm band but in order to do so I must install the out-of-band transmit mod for this radio.

ICOM will not give me the mod because I can't produce a MARS/CAP permit even thought I intend to use it in the ham band.

Could someone please provide me with the modification necessary?

>Would be interesting to see some sort of compendium of interesting phonetics
>ACTUALLY used by REAL operators.....

I wished I had the call issued just after mine, N0NUK, which makes a nice environmental statement. Also, here in the Denver area we have N0ISE, sometimes quite appropriate for radio communications.

>> AMATEUR RADIO LICENSE CLASS

>> No Technical Background Needed!

>>The Wellesley Amateur Radio Society is holding Amateur Radio
>>Licensing Classes this Fall.

>When people post messages of this kind, could they kindly include the
>state in the message, preferrably near the top?
> thank you.
> jim, NE3X

It was assumed that folks would have sufficient background to KNOW
that there is on ONE Wellesley--you know, of Wellesley College fame?
After all, Wellesley is a VERY famous women's college in the town of
Wellesley Massachusetts about ten miles west of Boston. The radio
club actually met at the college at one time.

You never heard of Wellesley College?

tsk, tsk, tsk,

The Ohio/Penn Dx Packet Cluster
DX Bulletin No. 031 (OPDX.031)
October 14, 1991
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn Packet Cluster Network, K4CEF & the Southeastern Packet Cluster Group, ARRL Bulletins, QRZ DX, WB2CVL, K3BEQ, WB8HIW, KQ8M, W8QWI and W8XD for the following DX information.

3B7, SAINT BRANDON ISLAND. Jackie, 3B8CF, is now QRT from here. QSL to his call book address.

9L, SIERRA LEONE. Dave, 9L1US, was heard saying that he will begin tearing down his antennas the first of November, following the CQ WW Contest.

P5, NORTH KOREA. It is reported now, that Romeo is definitely NOT going to P5 at this time. He and the other operators who just operated from XY, 1S and 3W are much too tired and they need a rest.

S2, BANGLADESH. Things are looking up for this one to be active soon. From the W1AW ARRL Bulletins, it was reported that the Bangladesh Amateur Radio League, BARL, announced regular licensing of operators has begun in S2. The first two licenses were issued to BARL President Saif Shahid, S21A, and General Secretary Nizam Chowdhury, S21B, on Oct. 5th. Six more licenses are expected soon. Probably the next licenses to be issued will go to Jim and Kirsti Smith, VK9NS and VK9NL, and Eric, WZ6C. It was also mentioned this week on W2MIG's Net, that no authorized amateur radio operation has been permitted since the Jim Smith operation.

T2, TUVALU. Bing, VK2BCH, is now QRV from Tuvalu as T20XV. He plans to be active for several weeks. QSL to home callbook address.

XU, KAMPUCHEA. XU0JA will be active thru October 16th. Most of the activity is on CW (around 25 kHz up from band edge). QSL via JA1NUT. The Southeastern Packet Cluster Group reported hearing and working a XU1U. It is undetermine whether this station is part of the XU0JA group or a SLIM (he did say QSL to JA1UT).

YA, AFGHANISTAN. Jackie, F2CW, will be returning to YA on October 19 with a vertical antenna. His callsign will be YA2CW.

YV0, AVES ISLAND. A DXpedition to Aves Island is planned to start about November 5th. Duration is reported to be about 2 weeks and the callsign reported will be 4M0PV.

ZA, ALBANIA. A lot has been said about ZA over the past couple of weeks, so I will try to keep it short. The ZA1A international group went QRT, on October 7th. Their totals for contacts were reported to be over 70,000. At this time ZA1A is the only station that has sent documentation and is approved for DXCC. The ZA1QA and ZA1HA still continue to be active as this bulletin was being written. The French group operated as ZA1ZMX, ZA1ZXV and ZA1ZVX for 5 days and went QRT on Friday. Also, another new ZA showed up on 28480 kHz around 1800z this weekend as ZA1DX. Zoli, HA5PP, who was the operator, said QSL to P.O. Box 200/66, Budapest, Hungary. Begin looking for the 12 Albanian students who graduated last week from the ZA1A group. (ZA1TAA thru ZA1TAL)

ZL8, KERMEDEC ISLANDS. Ron, ZL1AMO, is supposed to be active from Rotuma as 3D2RW, but has not been heard since October 7th. He is working very hard on a ZL8 DXpedition slated for around March.

THE FIRST QSL DXPEDITION. In a phone conversation with Bob, WB2CVL, he reported to the OPDX that he will be traveling to Moscow on Dec. 23 for the purpose of obtaining 400 XY0RR QSL cards. His plan hinges on approval from Romeo, UB5JRR. Bob is looking to take calls and cards from a maximum of 400 stations interested in participating in this project. He plans to gather the cards from those stations and personally deliver them to Romeo and return with validated QSL confirmations. In addition, Bob will donate some blank QSL cards to Romeo to help expedite the QSLing process for these much sought after QSL cards. Donations to cover transportation and QSL costs will be essential to making this project possible. For further information Bob can be reached at 908-846-2056 if your interested. Bob feels he will have an answer from Romeo sometime this week and needs to finalize his list.

SOUTH ATLANTIC CRUISE. Ken, WB8HIW, was informed by F6EWE, that a group consisting of F6EOZ and others (doctors, geologist, scientist), will be cruising the South Atlantic on a boat called Antarctica. They will be at sea for approximately one year and plan to stay at least one week at various rare islands. Some of the islands mentioned are Peter I, Bouvet and South Sandwich. Details are still sketchy, but the general purpose of this expedition is the preservation of the Antarctica natural resources.

STATIONS SLATED TO BE ACTIVE IN THE CQ WORLD-WIDE SSB CONTEST.
(Compiled from some rumors, nets and QRZ DX Bulletin)

This is the last one of the summer.....

***** 50 cent buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS

FLEA all SUMMER at MIT
Sunday, October 20, 1991
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 400 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $1.50 (you get 50c off if
you're lucky enough to have a copy of our add)
and sellers spaces are $8.00-each at the gate
or $5.00 if mailed by the preceding 5th. A sellers
Season Pass for all 7 sundays is available for $28
if purchased by April 21st

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)

Here in Salt Lake City, there is a gentleman who sign W7"F"rankenstein's "S"econd "C"ousin (W7FSC). He stated that his children gave him a toy Frankenstein doll with this written on it. At that time, I held tthe call N7FON (N7 "F"rankenstein's "O"ther "N"ephew, as bestowed by the 2nd cousin. I could never gigure out what to do with KE7KJ. And now, because not very many hams I talk to use these "fun" phonetics (they are outside of the USA, and may not understand, and other reasons), I use the real phonetics as much as possible for WR7O.

Source record: 292433

Jeff,
A number of years - pre-coax seal - of installiong / servicing industrial communications systems along the Gulf coast produced this combo: use only 3M Scotch 88 plastic tape. It is more expensive than the ordinary (Scotch 33) tape but has a wider useful temperature range. Use 3M Scotch-Kote - a liquid insulating coating obtainable at electrical supply houses.

The method previously employed involved coating the exterior of the connectors and about three inches of cable each direction from the connectors with Scotch-Kote and then wrapping it with Scotch 88 electrical tape while it was still wet (snug but do not stretch this layer as it increases the tendency to unwrap in cold weather). Messy job, but the Scotch-Kote-tape conbination really seals it. On top of this, I used a layer of rubber electrical tape and then another coat of the Scotch 88 (snugged, not stretched) finished on the outside with another painting of Scotch-Kote.

The problem with this seal is that while it is almost water impervious, it is equally impervious to opening the connectors up again! Can be done, but takes a lot of patient cutting and peeling with a sharp knife.

These seals would last as long as they could endure UV radiation from the sun (2-3 years, typically). Probably a layer of reflective foil tape on the outside would make them last as long as you want.

This soultion does not alleviate your distaste for coax seal - just changes the material! Today, I follow the same process in my ham station but I do use coax seal as the first layer since it is easier to remove than Scotch-Koted plastic tape! That exterior layer of Scotch 88 and Scotch-Kote still works like a jewel, though.
Wayne, KB6CSP

Source record: 292432

Went through the same analysis several years ago. I guess it gets down to personal perception and preference. Beauty and, to an extent performance, are in the eye of the beholder.

Yagi's, for the most part, seem to be mechanically superior.

Quad's seem to exhibit fractionally more gain and are slightly quieter due to the closed loop element design.

Quads are more tolerant of low altitudes - i.e. appear to maintain a lower radiation angle at lower elevations above ground than a Yagi similarly mounted.

Since I live in an area subject to annual ice storms, etc., I elected to go with Yagis. No regrets, but am still fascinated by Quads and just might try one some day for the heck of it.

From article <1991Oct15.134207.6539@news.clarkson.edu>, by bray@cheetah.ece.clarkson.edu (David Bray):
> GOODWIN%SMCVAX.BITNET@mitvma.mit.edu (Dave Goodwin) writes:
>
>> Having just purchased an ICOM-735 transceiver, I'm interested in finding out
>> if anyone has devised the necessary interface between a PC and the rig's
>> serial control port? I know Icom makes one, and though I haven't checked the
>> price yet I'm sure it will be ridiculously out of line. Thanks.
>

OK Here is the design --

ICOM Radio/RS232 interface which meets RS232 specifications.

```
*-------------------------------------------------------------------------*
* This circuit has no expressed or implied warranty of any kind. *
* It works very well for my IC-735 and with three different computers. *
* It has not been used on any other Icom radio but should be compatible *
* with a number of other desktop models. *
* BUT *
* !! USE IT AT YOUR OWN RISK !! *
* D. W. Bray, K2LMG -- Clarkson University *
*-------------------------------------------------------------------------*
```

This design uses a chip designed to produce both the + and - voltages required by RS232 from a single +5 volts, and incorporates two receiving and transmitting inverters which meet the RS232 specifications. The only other chip needed is a buffer which allows its output to be driven from another source.

A circuit drawing is presented below. In words, the implementation is:

ICL232 Chip -- Pin 14 is output to RS232 Pin 3; Pin 13 is input from RS232 Pin 2; Pin 11 is tied to 7417 Pin 2 and to a 270 ohm resistor, the other resistor connection is tied to +5V; Pin 12 is tied to 7417 Pin 3.

ICL232 Chip -- Capacitors. C3 + lead is tied to Pin 2, C3 - lead is tied to +5V; C1 + lead is tied to Pin 1, C1 - lead to Pin 3; C2 + lead is tied to Pin 4, C2 - lead tied to Pin 5; C4 + lead tied to GND, and C4 - lead tied to Pin 6.

ICL232 Chip -- VCC is Pin 16 which is tied to +5V. GND Pin is 15 which is tied to ground. All leads not mentioned should be open.

7417 Chip -- Pins 2 and 3 are tied as discussed above. Pins 1 and 4 are connected together and to the center pin of a 1/8" plug for

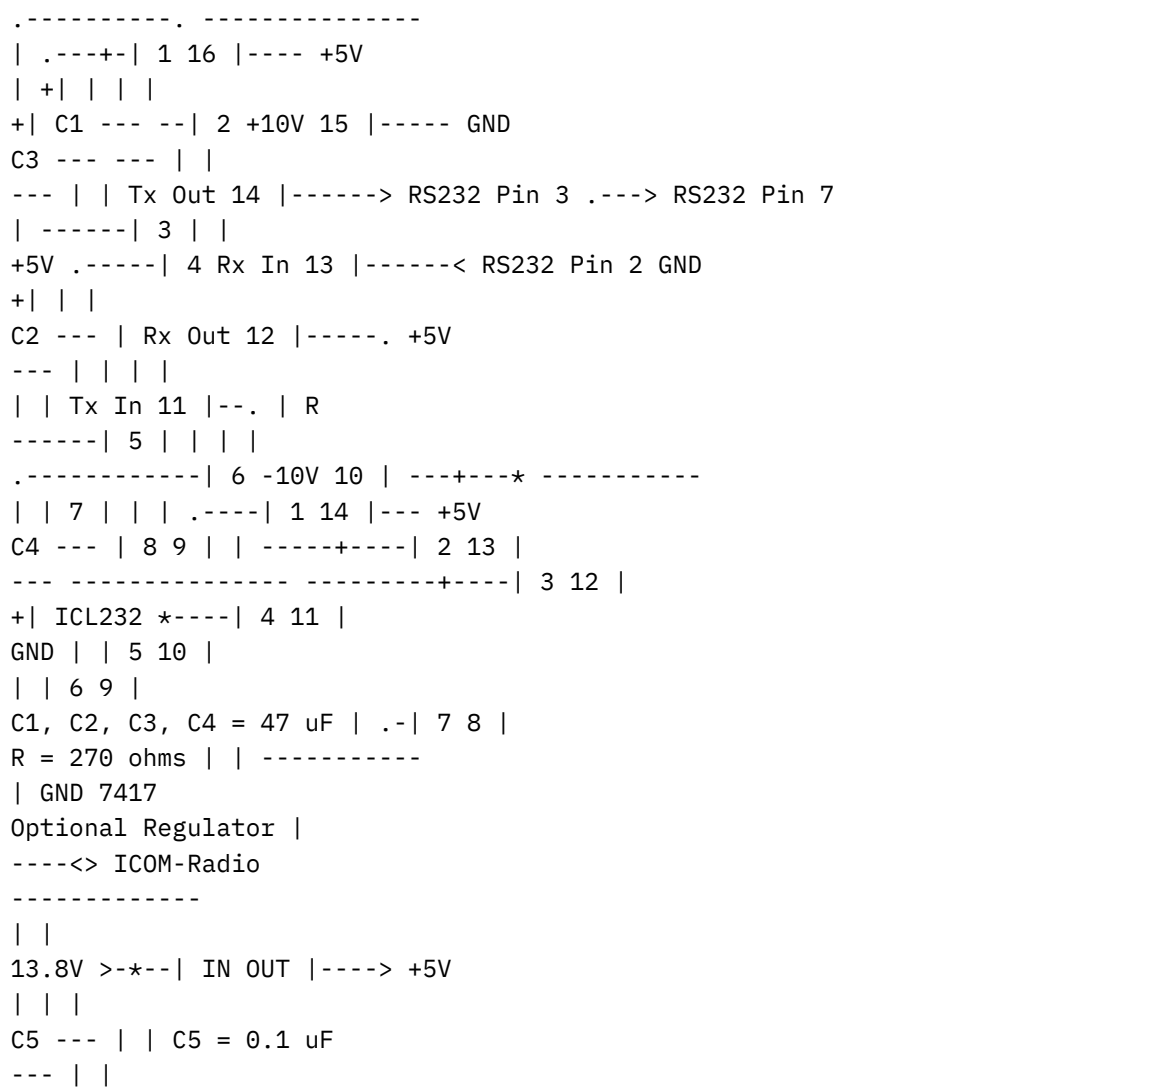
connection to an Icom radio.

7417 Chip -- VCC is Pin 14 which is tied to +5V. GND is Pin 7 which is tied to ground. All leads not mentioned should be open.

The ICL232 chip uses an internal oscillator to create the +- voltages by voltage doublers (which require C1 and C2). Pin 2 is a +10V source, Pin 6 is a -10V source (but are not connect to anything is this design). The Transmitters (Tx) and Receivers (Rx) meet RS232 specifications. One source of the ICL232 is: DigiKey Corp., Thief River Falls, MN 56701-0677 -- 1-800-344-4539. Price approximately $4.80.

The 7417 is an open collector buffer chip. This allows a buffer output to be driven from another source, and is compatible with the Icom IC-735 internal pull-up circuit. Designs which use 1488/1489 chips, where the Icom input/output lead is tied to a buffer output (in a similar manner to this circuit), violate chip specifications.

In this diagram "+" means "cross", that is, no connection; '*' means connection.



```
*--| Common | In words: Tie 13.8V to the Input Pin and to a
| ------------- 0.1 uF capacitor connected to ground.
GND 7805 Tie the Common regulator pin to ground.
The Output Pin is +5V.
```

Message-ID: <1991Oct16.101443.7961@vax5.cit.cornell.edu>
Source record: 292434

I am interested in the new Icom handheld the IC2SRA, which is
according to the manufacturer a 2m HT with wideband reception
from 50 MHz to 950 MHz. I have been looking for a while for
a beast like this, but I was hoping someone could tell me
a little bit about their experience with this particular model.
Is it as sensitive as it should be? Is it as sensitive as the
R1 for the frequencies it recieves? ARe there any unacceptable
compromizes in putting a sensitive broadband handheld receiver
in a 2m HT? The best price I have heard so far is $500+. Any
advice anyone could give me would be appreciated. Also, is there
anything worth listening to between the 30MHz my HF gets and the 50MHz
I could receive with the IC2SRA? I think there are old police
frequencies there? I was hoping to use this handheld for mostly
casual listening, but also some packet work on the local nets.
Thanks. Don Drinkwater FYSY@crnlvax5

Message-ID: <1991Oct16.142709.9539@axis.dsg.ti.com>
Source record: 292436

I've got to agree with Dube. I am disturbed by the wording of the speech AND the attitude that amateur radio has so much "excess capacity". The 220 debacle is hardly over and it is certainly true that local government units would like access to some of our frequencies. If we have enough excess capacity to warrent "business" use, it is only a short time till someone grasps that idea and decides it would be better to put that capacity to other entirely non-amateur use!

Phil's idea of simpler rules is a good one. We could all assist Public Service events with less worry (can I report where the race leader is, or is that business?). Packet Stations could forward messages for non-profit organizations w/o complex message checking for "business" items. Missionary organizations could request needed supplies in non-emergency situations. ETC. _However_ the rational MUST be the sense of easing the regulatory burden and allowing our "self-police" policies to deal with violations (i.e. nobody wants the ham who owns the hardware store to be routinely dispatching his delivery people over amateur bands). Further, the expanded use must still be done by amateurs (I gag at the thought of non-licensed government or media folks using amateur freqs on a so-called secondary (or is it tertiary?) basis: if they get used to using our bands, they aren't going to want to stop peaceably just because you and I want to carry on a "ordinary" amateur communication!).

Where can I find an FTP site that contains ham-radio-related graphics
images in a format usable by WordPerfect 5.1 (.WPG, .TIFF, etc.)? As
an alternative, I can deal with anything in UUENCODE format if anyone has something.
Right now, I am especially in need of a modulated carrier wave (
like CW or AM would appear), but I would be interested in other things
like the ARRL logo, antennas, etc.

Please direct UUENCODED files to hpeach@ca.uky.edu as this account is
setup for them. Other replies to this account are fine.

You can get a lot more bidirectional gain (like 8 dB) by using
an 8JK array which is two dipoles 1/8 wavelength apart driven out of phase.
You could also use two verticals 1/8 wavelength apart if you
have a *good* ground plane. If you want further information, see any
antenna handbook or read W8JK's book (Antennas by Kraus).

> I can see my suggestion offended Dave. Sorry. I guess I don't
>view CB as poorly as Dave does.

I stand corrected in this case. More so, I only read an edited portion
of your reply. Your point is well taken. Kit building can become a
nightmare, but I wouldn't throw the entire idea out. I learned alot
about electronics and how transmitters work from building a full range
of kits: from simple to very complex. It was, at times a trying experience
but the results were a benefit.

Regarding the CB issue, I don't have a dislike for the CB at all. I
stated that all bands suffer from some sort of chaos in one form or
another but did not intend it to sound as though I was picking on the
11 meter band in particular. I started out on the CB and still enjoy
talking on it. I've spoken with many people who have ham equipment
that they are using for CB purposes, who don't have a amateur license.
They realize I'm a ham and have expressed interest in becoming one too.
It's times like this when I've tried to persuade them from using their
ham transceivers on the bands without a license. I know they're doing
it.....what else would they be doing with a $700 radio besides running
excessive power on 11 meters? (and fooling around on the amateur bands)

The reception I've received has been favorable from these people.
They like the idea of using full legal power legally. I've put these
people in touch with someone who can help them obtain training and
information, and at the same time expressed how easy it is nowadays
to get licensed.
So Dana, I'm sorry if you took the context of my posting the wrong
way. I was only trying to help and not necessarily picking on you
in particular. As I've written in the many favorable e-Mail messages
I responded to, I was blowing off steam regarding the way the
newcomer to the hobby is treated from time to time, both on this
newsgroup and in the amateur community as well.

There is a type of enamel coating that is meltable at soldering-iron
temperatures. (Belden calls it "polythermaleze" which I assume is a
trade name.) You were probably using wire of this type. I doubt you
could get a soldering iron hot enough to melt standard enamel!

Source record: 292449

The college net, a place for college or university amateur radio stations to meet will be called tonight.

We had an excellent turnout last week. This week the frequency is different!

We will be meeting on 21.308 not 21.255! So, spin a little further up this week. W7YH, Rob in Washington will be your net control. The forty meter net this week is cancelled unless we find another net control here pretty quick.

Hope to see you on. If you get this late, we will meet again next week, hopefully on both 15 and 40 meters. If you are interested in receiving the announcements about the college net by mail and you don't already, please drop me a line.

Oh, if there are any stations novice or tech who want to check in on CW, mail me with that info also. We can arrange a special time a few minutes early or something for you guys. Note that I am not a CW op. I'll take your callsign and let you know I heard you. All traffic or business will be on the phone net. But, if you'd like to officially check in via radio, we can take care of you.

See you on the net. CQ CQ any college or university station. This is the College Net!

>version. So, which one do you have??
>
> /s/ Bob Gettys N1BRM - owner of an IC-22U (thumbwheel programmable)

Just to confirm Bob, there were indeed three versions:

IC-22(a) 22 Channel Crystal controlled
IC-22S Synthesized, normally only operates on old
repeater band 146-148.
IC-22U thumbwheel switchs.

I'm not absolutely positive whether the crystal rig was a 22A or just a 22.

>How are past and present UHF TV channels allocated? Anyone have a handy
>online copy that they could send me? What parts of the UHF spectrum have
>been reallocated from TV to other purposes?
There are 3 bands:
Low-band VHF, 5 channels 6MHz wide 54-72MHz (2-4) 76-88MHz (5-6)
Hi-band VHF, 7 channels 6MHz wide 174MHz to 216MHz (7-13)
UHF (as of 1971) 70 chan 6MHz wide 470-890 MHz (14-83)
I don't know the details of reallocation but I think it depends
on who can lobby, bribe, or bully spectrum; TV or Cell.
>
>Is there a really good small UHF TV antenna that is easily made? Right
I use a TV rabbit ear collapsed to an overall length of about 14 inches
which makes a dipole resonant at the high range of the UHF band :-)
>Oh, and whatever happened to TV Channel 1? I know it's ancient history,
I may be wrong about this but I think ch1 overlapped the old fm
allocation and was scrapped. Then the new fm allocation went into effect
and left space for baby monitors and portable phones.

Regarding whatever happened to TV channel 1, WA9BVE is wrong. Channel 1 did NOT become six meters. Six is 4 MHz wide, TV channels are 6 MHz wide. Channel 1 was 44-50 MHz, just above the old FM BC band. As far as I know, no stations ever made it on the air on this band - though Raytheon had a CP in the Boston area (they say).

Just think of the mess if six had had TV on BOTH sides of it! One of the main reasons that Channel 1 was withdrawn was doubtless the greater incidence of Es and F2 long-distance propagation on these lower frequencies.

This posting in no way represents the official position of my employer.

>repeater. (I'm not from LA, but I take it from the postings that
>this describes the repeater in question.)

The user group allows it because this is what the users want!
The ONE rule of the Mt. Wilson Repeater Association is that
there are no rules. As a user/listener since 1981, let me list
some of the activities and modes of operation on the famous
147.435/146.400(448.950 link) repeater:

- "typical QSO's" about weather, rigs, etc.
- swap net
- antique radio net
- trivia net
- joke net (lude jokes allowed)
- other nets that I can't remember now
- political & religious discussions
- talk about sexual acts
- talk about law
- "verbal abuse"
- "king of the hill" jamming contests (winner must
capture the repeater so that no other users can
be heard for at least 15 seconds)
- poetry reading
- debates and arguments about every subject.
- tape playing
- handling emergency traffic as needed.
- and much more

Operating convention dictates that all users duplex so that
others can make comments over top of them, they won't
double and so they can tell when they are being jammed.

And as far as the illegal stuff goes, of course no one likes to
be jammed, but the bootleggers, malicious jammers and music
players usually keep it to a minimum and are low power enough
that it is only heard when no one else is talking. Personally,
I find this very funny and an enjoyable operating environment.
Jammers, bootleggers and operators typically standby for
emergency traffic to be handled; and this repeater deals
with lots of emergency traffic.

>For one thing, the trustee is legally responsible (along with
>the repeater user) for any transmissions the user makes. I know
>I don't want to put my license on the line for someone else's
>illegal operation.

We're not asking you to. ;-) The FCC has not been giving our
trustees a hard time, so I guess they approve. Anyway, there
is a long line of hams willing to be trustee of this machine
including this licensee. I strongly disagree with any reading
of part 97.113(a) or the Communications Act of 1934 that restricts
the content of radio transmission or makes the repeater trustee
responsible for said content. I am a vulgar man. All I ask
is for a place where I can be myself and not worry about some
clown turning the machine off because I say "fucking asshole"
or something. 147.435 is such a place.

>Why not just have a control operator turn off the repeater whenever
>illegal operation occurs? ...
>Hopefully, over time, the jammers will
>realize that they can't have their audience, and will move on to
>less destructive pursuits.

The last trustee of the repeater was thrown out by the users
for turning the machine off when "illegal operation" occurred.
The current trustee has vowed that the "machine will be
turned off for no reason!".

>What am I missing here?
>AL N1AL

The whole point! A group of people have banded together to fund
and support a repeater where they don't have to worry about a
control operator turning the repeater off because of "blatant
obscenity", topic of discussion, etc.

>P.S. By the way, the difference between repeater and HF jamming
>is that you can't "turn off" an HF frequency.

You can always turn off your radio or change frequency. If the
operation on 147.435/146.400 bothers you, I suggest this as the
solution to all those offended. ;-).

Love,
Roger Bly (ka6mwt)

said:
> found out the freq's for the VHF marine band. they are....
> channel 1 156.05 Mhz. each channel after that add .05

This is only about 40% correct.
Channels 1 to 28 are 156.050 MHz, plus .050 per channel, to 157.450 MHz.
Channels 60 to 88 are 156.025 MHz, plus .050 per channel, to 157.425 MHz.

For duplex channels(1-5, 7, 18-28, 60-66, 78-88) the above gives the ship
transmit frequency. The shore transmit frequency is 4.6 MHz higher.
An "A" suffix indicates "USA Mode" - simplex operation on the ship tx frequency
of an international duplex channel.

Channel 16, distress, safety and calling, is 156.800 MHz. The adjacent channels,
75 and 76, are not used.

Message-ID: <1991Oct16.205607.103022@cs.cmu.edu>
Source record: 292459

.

I don't want to berate anyone, but I have a serious problems with cutesie callsign phonetics. My primary dislike for them is that they require conscious deciphering and inhibit efficient and professional style in communications. Some unofficial phonetics completely obscure the numeric component of the call when they flow from the first character through the last, which especially increases the difficulty in parsing the call. I'm all for enjoying the radio and bantering back and forth, but I do draw the line with cutesie callsign phonetics over in the "handle" and CB bin. However, I think they're fine for fun off the air.

My second problem is that cutesie calls are all too prone to sexism in this male dominated hobby. For example, "need 3 good willing girls". I REALLY hate to come off stuffy, but I strongly feel sexual innuendoes have no place in amateur radio communications. I liken this to standing in the hall telling loud jokes that place women in subservient positions and insidiously oppressing the female co-workers over hearing such discourse. I seriously doubt any educated woman ham operator (ignoring for now the dated use of YL and its Victorian etymology) would feel comfortable having a conversation with some guy looking for "good willing GIRLS" or for someone to "kiss my yagi" (credit due for discontinuing this usage after meeting a woman on the air). With some QSL samples and cartoons I've seen around amateur radio, it is almost as if we are a guild of all male truck drivers (no insult meant to truck drivers, ham radio is a different subculture), and there is no confusion some women don't feel at home with amateur radio since it comes off as a good ol' white boys hobby.

I really don't want to start an argument. I do want to state how some of this fun appears to others, and I think others must share my view of this.

Bill

P.S.,
My apologies to the gentlemen whose calls I had to reference in this message. I do not mean to call your character into question or to judge you in anyway.

Sorry for taking so long to reply. I've been real busy here and it took
a while to gather specific information from recent publications.

Doesn't anyone else out there know anything about SSTV????

Here is a quick summary of what is available. There are probably others
I don't know about.

Scan Converters

A couple years ago anyone who was serious about SSTV had a Robot 1200C.

It is a complete system dedicated to SSTV. Just connect it to
- Color TV camera (either NTSC or PAL).
- Color TV set or monitor.
- Speaker and Mic connectors of a transceiver.
- Tape recorder for picture storage.

It has 4 black & white modes (one compatible with original 8 second) and
4 color modes with different transmission times and resolutions.

It displays images with 256 x 240 resolution with 18 bits per pixel.
That's more than 250,000 colors.

Robot Research
5636 Ruffin Road
San Diego, CA 61927

It also has a parallel port for connection to a home computer. Several different programs for transferring images to/from the 1200C and for performing various other functions are available.

Hi-Res, Version 1.4 (for IBM PC)
Tom Jenkins N9AMR
5968 S. Keystone Ave.
Indianapolis, IN 46227

SCAN, Version 6.0 (for IBM PC)
Bert Beyt W5ZR
301 Tampico St.
New Iberia, LA 70560

SSTV (for IBM PC)
Garnet Bebermeyer WB0UNB
15 Almeda Ct.
Fenton, MO 63026

IMAGE (for IBM PC)
Dick Isely WD9GIG
736 Fellow St.
St. Charles, IL 60174

name? (for Amiga)
Tom Hibben (call?)
Box 188
DeSoto, WI 54624

Replacement PROMs are available to give the 1200C other transmission modes such as Wraase, Martin, Scottie, and AVT. PROMs available from:

Martin Emmerson G3OQD
6 Mount Hurst Rd.
Hayes, Bromley
Kent, England

Unfortunately Robot Research is more interested in selling higher priced systems to industrial customers. The 1200C hasn't been enhanced or advertised for years. There are conflicting reports as to whether the 1200C has been discontinued entirely or if an occasional batch is manufactured.

Two clones of the 1200C are available:

LM9000
John Wilson VK3LM
R.M.B. 4201A
Tallangatta Valley 3701
Victoria Australia

NS-88
Munaki Yamafuzi JF3GOH
P.O. Box 670
Osaka Japan 531

I think the LM9000 is available only as blank PC boards. One magazine article warned readers not to be too hasty about purchasing boards because the other parts required are hard to find and more expensive than you would expect. But if you do build one it is compatible with the 1200C and can use the Martin Emmerson PROMs.

The only other stand-alone scan converter mentioned during the last few years is the Wraase SC-2. Not much was mentioned about it.

Volker Wraase Electronic
Kronsberg 10
D-2300 Altenholz
Germany

Home Computers

Now that most home computers have plenty of memory and acceptable color graphics, the most cost effective method is to use a computer with a suitable interface and software.

Note that if you want to send a picture of anything real, you will also need a frame grabber which will add a few hundred more $ to the total system cost.

Amiga

The AVT system has become quite popular during the last couple years for both SSTV and WEFAX. It is composed of an interface that attaches to the parallel port and software.

It has images with up to 4096 colors, all the popular transmission modes, builtin graphics editor, text generation, image processing techniques to clean up noisy pictures, and loads of other features.

AVT Master
AEA
P.O. Box C2160
2006 196th St. S.W.
Lynnwood, WA 98036-0918

Seen on net recently:

I have built an SSTV transmit program for the amiga... it currently does 8 sec b/w (but all the hooks are there for the other common modes), sending native iff images - anyone interested?

Atari ST

Color SSTV, WEFAX, and other ham radio software are available from:

Atari Microcomputer Network
John Adams KC5FW
17106 Happy Hollow
San Antonio, TX 78232

ASTUR (Atari ST Users on Radio)
GEERAERT Michel
W. Elsschotlann 21
B-8460 Koksijde
Belgium

The WEFAX program requires a very simple interface containing an XR-2211.

The "sSTv" program can use two different interfaces.

In the low cost configuration, the internal sound generator is used for transmit and a simple two chip interface (total cost about $7 including perf board, connectors, etc.) is used for receive.

Much better results can be obtained with an interface from:

A&A Engineering
2521 W. LaPalma, Unit K
Anaheim CA 92801
(714) 952-2114

See 73 Magazine, December 89 and January 90, for more details.

The latest version of the software has all the popular modes (Robot, Wraase, Martin, Scottie, AVT), a graphical user interface, and full screen images with dithering to give the appearance of hundreds of colors when viewed from a distance.

IBM PC

Several WEFAX systems are available:

PC HF Facsimilie 4.0
PC GOES/WEFAX
Software Systems Consulting
150 Avenida Cabrillo, "C"
San Clemente, CA 92672

MULTIFAX
Schwittek WEFAX Systems
David E. Schittek NW2T
1659 Waterford Road

Walworth, NY 14568

A & A Engineering
(address above)

There are surely others. I found these by flipping through a couple
recent magazines.

The SSTV picture is dimmer. Software Systems Consulting (above)
had an interface and software for SSTV. It was only black & white.
Today everyone uses color so it not surprising that the SSTV product hasn't
been advertised for a couple years.

I'm aware of only one color SSTV system for use with an IBM PC. The
interface plugs into the printer port and a VGA is required. The software
runs on the full range of PC's (4.77 MHz 8088 to '386...). The current version
supports all the Robot modes and Scottie S1. Interface kits are expected to
be available in a few months. When writing for information, you are
requested to enclose $1 to cover costs of duplication and mailing of
hardcopy info. For a demo disk enclose an additional $2.

John Montalbano KA2PYJ
10 MacLeish Dr.
Morganville, NJ 07751

READER POLL: I'd like to take a poll. The reason SSTV has never been very
popular was due to the expense. A few years ago there was no decent
alternative to spending $1300 on a 1200C. Now that VGA cards are under
$100 and some capable of 32k simultaneous colors aren't much more, a
PC-based SSTV system can compete with the 1200C. How much would you be willing
to spend on an interface/software package to run SSTV with an IBM PC and
VGA? $300 (price of AEA AVT for Amiga)? $200? $100? zero?
Would you be willing to put together a kit or demand an assembled product
with a 2 inch thick manual? Will SSTV become very popular once it is
reasonably priced?

Please e-mail directly to johnl@stardent.com to avoid wasting bandwidth
here.

Others

There have been SSTV implementations for other machines such as Commodore 64
and the old 8 bit Ataris. CQ-TV also mentions SSTV for machines we never
heard of in the US. I can scrape up references if anyone cares.

Publications

Modern information on SSTV is very scarce. The last SSTV handbook, that I know
about, was written by Don Miller and Ralph Taggart about 15 years ago.

The British Amateur Television Club has a book, The Slow Scan Companion ???,
but it's not really a handbook with organized chapters on different topics.

It's more like a random collection of magazine articles. There is no introductory information such as how color images are conveyed by audio tones.

There are a few magazines that specialize in Amateur Television. These are mostly oriented toward fast scan TV but SSTV and WEFAX are mentioned occasionally.

But what is there to say about SSTV? A few years ago everyone bought a 1200C. Now people buy an AVT system. People send pictures to each other. The homebrewers have either faded away or are keeping quiet about what they are doing.

Amateur Television Quarterly
1545 Lee St.
Suite 73
Des Plaines, IL 60018

The SPEC-COM Journal

Booklets of old ATVQ and A5 articles are available from:

ESF Copy Service
4011 Clearview Dr.
Cedar Falls, IA 50613

Summary

Most people are scared away from trying SSTV because they think it HAS TO be expensive. That WAS true but it's not anymore.

3894. Re: Pirates,Transmitters,etc.

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-16 22:51:46 UTC
From: allbery@NCoast.ORG
Message-ID: <1991Oct16.225146.21458@NCoast.ORG>
Source record: 292470

As quoted from <1991Oct15.134359.2810419@locus.com> by dana@locus.com (Dana H. Myers):
+---------------
| I advised Rob to buy the CB sets and "play there". He said he
| wanted to build a radio to talk to all his friends at once, in a
| few block radius. I thought it over and decided what his most cost
| effective solution would be. Also, by buying a working radio, he
| can get started in radio without the frustration of getting a
| home-built kit working. I was trying to be helpful and pragmatic.
|
| I can see my suggestion offended Dave. Sorry. I guess I don't
| view CB as poorly as Dave does.
+---------------

CB's such a mess that directing anyone who's seriously interested in radio to it is a mistake. (I listen there every so often with the 735... never for long. Too nauseating.) Unless you direct them toward the more expensive sideband rigs....

GMRS might be somewhat more acceptable --- except that the equipment isn't common and is probably quite expensive as a result.

How about 49 MHz FM? Radio Scrap [:-)] sells a number of radios on this Part 15 band, fairly cheap. And three blocks should be within their range.

Not that they are necessarily experts, but the local CATV company
uses these aparently very nice connectors on their RG6 (which they
use both indoors and outdoors). The connectors have little O-rings
inside to presumably seal them.

3901. 2m PA DESIGNS

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-17 03:55:44 UTC
From: zaremba@ux1.cso.uiuc.edu
Message-ID: <1991Oct17.035544.237@ux1.cso.uiuc.edu>
Source record: 292455

As people might already know, I need to troubleshoot a 2m PA (output of approximately 5W). I have it built, and now I'm having doubts.....

When the specs call for 6 turns of certain gauge wire, how do they define "turn"? That really confuses me. There is AMPLE leftover gain (1W driving a 5W final transistor)....and it a broadband design, so nothing is critical. I just need guidance on what to look for (the most likely thing I am doing wrong). Like miswinding coils, excessive DC, stuff like that.......

(I was also wondering whether my 4W 49MHz crystal-controlled FM XMTR was illegal, and can I get a permit to run a broadcast service on 49?

It would be really novel to have a 49 MHz station........

OK. Hmmmmm. Well, if you have the IC-22A (you didn't say which model but
there are two IC-22s with crystals the IC-22 and the IC-22A) the final
transistor, Q21 on the schematic is a 2SC1528. This is a common NPN
Silicon RF transistor, and also crosses to a Radio Shack 276-2020.
Hope this helps, Bob.

I am attempting to build a combinaton TENS (Transdermal Electro-Neural Stimulator) and hook it in combination with a photic stimulator (flashes of light synchronized with the brain's alpha waves). This is from a project in a Radio-Electronics issue. I was wondering how to synchronize pulses from a 555 timer with pulses of electricity from the TENS unit. Is there a simple way to synchronize the pulses? (Without adjusting them separately....)

I have no objection to those "cutesie calls"....and I think I qualify in at least 3 of the 4 adjectives used above. And I DO think that using a catchy phrase to identify a call is sometimes useful as a memory jogger. However, I do also wish to point out that if a person asks a second time, it should be spelled out phonetically using the correct phonetic alphabet. Lots of people have difficulty with my call on the radio, until I mention Sweet Pea, then they get it straight. But those who ask a second time will always get it spelled phonetically.

As for the sexism, as long as it's clean fun, I take it in the spirit that it was intended. And I think it's really tragic that this subject has been in the news as much as it has in recent years. Now, let's get back to more hammish type subjects, ok?

3908. Sealing Coax Connectors.

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-17 11:21:19 UTC
From: PJML@ibma.nerc-wallingford.ac.UK
Message-ID: <17.Oct.91.12
Source record: 292409

My method goes like this.

1) Use proper connectors. 'N' and 'C' connectors are semi-waterproof as standard. So-called 'UHF' connectors should be avoided.

2) Pack the mating parts of the connector with silicone grease before coupling them. Screw down tight (use a wrench!).

3) Wrap self-amalgamating rubber tape over the connector, stretching it well. If you do not stretch it, it will not bond properly.

4) Paint over the tape, and for about 3 inches down the coax, with bitumen paint. The stuff used for sealing flat roofs, leaking downpipes etc. is just fine. Boat shops have a good range of these sorts of paints.

5) After the paint has dried (a couple of days), heat with a blowlamp or hot-air gun. This drives out any air bubbles. Allow to cool and reapply extra paint if needed to fill pinholes etc.

This may be messy and look horrible, but i have opened connectors after 10 years in a salt-spray environment and they have been perfect.

3909. Some Propagation Questions

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-17 11:51:44 UTC
From: eckman@eos1.larc.nasa.gov
Message-ID: <1991Oct17.115144.3596@news.larc.nasa.gov>
Source record: 292476

With the outstanding propagation conditions that we've been experiencing
on HF during the last several days, I came across an odd phenomenon on 10 and
12 meters that I hope someone can explain. During the local evening
here along the east coast (after about 1900 EDT/2300 UT), I've
noticed some south American stations coming in with what appeared to be
pronounced polar flutter. The stations in question were from Uruguay and
Brazil. It's been apparent during the last few evenings and I wonder what the
reason for a trans-equatorial path exhibiting this sort of flutter might be?
At the same or somewhat earlier times, some interesting Northern European
stations have been noted on 10 meters from Northern Finland and Murmansk
with, not surprisingly, pronounced flutter. Trans-polar reception has been
remarkable during the past few days.
Second question: does anyone have a version of 'mini-muf' or any other
public domain HF propagation program available in fortran? All of the
versions that I've come across are in basic for use on PCs.

Thanks for any assistance.

In an earlier posting, I said:
> Channel 1 was 44-50 MHz, just above the old FM BC band. As far as I know,
> no stations ever made it on the air on this band - though Raytheon had a CP
> in the Boston area (they say).

Of course I meant "made it on the air on CHANNEL 1". There were quite a few stations on the old FM band, for example W43B and W39B - both licensed to Boston - one running 300 kW ERP from Paxton, MA (Worchester), and the other from the top of Mt Washington, NH.

This posting in no way represents the official position of my employer.

3913. WANTED: Info on CQWW CW Contest

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-17 13:18:45 UTC
From: taormina@asl.SINet.SLB.COM
Message-ID: <9110171318.AA18078@sjosu1.sinet.slb.com>
Source record: 292398

The CQ Worldwide DX Contest is the most popular contest in the world. Everyone can work everyone and participants range from world class contesters to those who are just looking for some new countries on their favorite bands. The CQWW spawns lots of contest DX-peditions yielding goodies that aren't normally plentiful. The Contest has been going for over 40 years and has always been sponsored by CQ Magazine.

The exchange is a signal report and your CQ Zone. These 40 zones were invented by the founding fathers of the contest. They have no particular meaning, but add a second dimension to looking for multipliers. For instance, a UA0 counts for Asiatic Russia, but it can be in Zone 18, 19 or 23. That causes you to work every UA0 you hear until you've worked all the zones. Some countries have more than one Zone and some Zones are in more than one country. You need a copy of the CQ Zone map or a good computer data base to become familiar with the Zones. The contest uses the ARRL DXCC Countries list plus, the WAE list. The later adds such goodies as GM Shetlands, UN1 and IS (Sicily) to the list of possible multipliers.

There are a number of categories of entry. The most fun for a group of new conesters is multi-single (several operators, multi-radios). In this category, one station can continually work stations and the other can search for new multipliers, changing bands no more often than every 10 minutes. It allows you to learn together what is going on. There is no other way to break into contesting than to get involved! If you are fortunate to have a multi-op station nearby, get yourself an invite to come help log or keep the coffee pot full. As with all other aspects of operating, listen first, and become familiar with the rules of the road. Then jump in and join the fun. The rule of thumb is to be on the highest frequency band that is producing the best QSO rate. It is no more intimidating than that.

If you have a computer at the station, contest logging programs like K1EA's "CT" take all of the pain out of book keeping a contest.

If you are going to enter, no matter how small your score, I encourage you to submit your log. You never know when you might be the only one in your category and wind up with a nice certificate to hang on the wall!

I'll be away for the next week. If someone hasn't sent you the rules and some log sheets by the 28th, please send me an e-mail message and I'll be happy to fax them to you. CU in the pileups!

AMEN. I do agree with both halves of Bill's statement.
I especially find it disconcerting when someone comes back to
me using a different set of phonetics than the ones I gave out!
Takes me a minute to figure out they mean me.

On the other hand, I especially like my call suffix in morse :-)

P.S. I _do_ realize that hams who've been around a long time
originally learned "Able Baker . . ." and sometimes have some
troubles thinking the newer "Alpha Bravo . . ." international
phonetics (as listed in the ARRL Handbook and the military
communications books post WWII). I don't think this is a wide-
spread problem though. Made up phonetics like "Queens Sexy Lace"
don't equal QSL to my wife (KI5EV-amateur extra) or myself.

Source record: 292396

Paul, AA6PZ commented about coil dope. The stuff is liquid polystyrene. If it isn't available in electronic outlet stores, the stuff can be easily made. Dissolve styrene coffee cups (or radio packing material) in lacquer thinner. Perform the process in a closed canning or fruit jar to reduce the thinner evaporation. The process goes something like this:
1. Pour lacquer thinner into the jar to a desired level. Typically 1/2 to one inch deep.
2. Shred styrene material into small bits.
3. Dump the styrene into the thinner.
4. Wait for the first bits to dissolve about 80% of the way. Observe the thickness of the mixture.
5. If too thin, add more styrene; if too thick, add a small amount of thinner.
6. Adjust the quantity to the desired amount needed.
7. Store the remainder in a tightly closed small bottle.

Just spread the styrene around the coil using a toothpick or small brush. If using a brush, be sure to clean it after use. The styrene sets up rather quickly so work fast if covering a large area. The Q factor of styrene is very high so that it will not affect the Q of circuits operating on frequencies below about 500mhz.

CAUTION: Don't sniff the mixture!

Just to prolong this a bit longer, as a relatively new ham, I've already heard too many instances where foreign DXers have been totally confused by the cutsie phonetics used by some stateside callers. When one's grasp of English is not tremendous, this can make things very difficult for the person at the other end. I'd argue (and I believe that the various ARRL books state) that these sorts of phonetics have no place in DX operation.

>what it is equivalent to.

There is no current production equivalent to the TR-4C. The IC735 comes closest in philosophy and performance. The 735's receiver is slightly better than the best of the old Drakes, the R4C. It's smaller and much easier to use than the TR-4C. But it only runs 100 watts out and has fixed tune output requiring an antenna tuner in many cases. 200 watts seems to be the upper limit on current production radios and fixed tune outputs are the rule, though a couple have builtin antenna tuners.

IMHO the IC735 is the best value on the market today. It's closest competitors all cost at least twice as much for very little extra performance. I discount the IC725 and FT747 as being clearly inferior.

US amateur radio *is* for the most part a "good ol' white boys' hobby".
So it is not surprising that it comes across that way. Only a few women
and minorities have taken to the hobby. Minorities have an easier time
fitting in over radio where only their voices are heard, but women stand
out immediately on the bands. The new technician license is changing this
slightly. We now have one (!) woman in our club. It has had a genteel
effect on our club meetings already.

Some are opposed to breaking up the men's club atmosphere of amateur
radio. Some wives *really* are concerned that radio may go co-ed and
they'll lose their husbands to both radio *and* the other woman.
Radio has seemed such a safe passtime, free from the social pressures
that have reshaped the rest of society. This may be coming to an end.

Is there any international phonetics for pronouncing digits? I seem to have seen one version where usually a digit is pronounced as a (more or less) Latin name of the digit and then followed by an English name of the digit. I wonder if it is currently internationally accepted one.
(I can check the book and give a complete info, if needed...)

I second Richard's feeling about cute callsign phonetics while working DX, just what do you think W4 BROKEN TURKEY NECK sounds like to a ham in UL8 who has just enough radio english to make a QSO with English speaking stations.

Better is to learn the phonetics for countries that you may wish to work. For example, I use ITALIA SANTAIGO LIMA, or NIKOLI NULL IVAN SERGI LEONIT. This has saved me many times while chasing Oblasts and working stations which are 22 both ways. Save the cute phonetics for 3AM field day. BTW I am WHISKEY ZERO CHICKEN FEATHERS most field days.

One admission, I do use NORWAY ZERO ITALY SOPHIA LOREN during DX contests only with Italian YL stations. They laugh so hard that sometimes it takes 30 seconds for them to QSL my report.

73 and have fun.

Not to mention Gay Hams, Black Hams, Diferently Abled Hams, All sorts of non white, male, heterosexual, christian, etc... type people.

Our culture is heavily biased against, and alienating to most people who do not fit these 'default' attributes . Any thing we can do to allow more people to enjoy themselves, especialy by sharing with others, is a plus.

>
>I really don't want to start an argument. I do want to state how some of

I certainly do share some of your view. IT is a constant struggle to find ways to overcome my cultural indoctrination. Humor that is not at the expense of others pain, thinking and treating other people as equals, and not responding in patriarchial modes to people who are Black, or Chinese, or Women, or whatever....

IT takes the desire and ability to step aside and take a look at things. To objectively view the impact of language, and actions on others.

3923. Yaesu 470 mods (The canonical list)

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-17 16:28:57 UTC
From: brian@nucleus.amd.com
Message-ID: <1991Oct17.162857.20272@dvorak.amd.com>
Source record: 292388

I asked recently about a problem I had with my 470 and mentioned
several mods that I had done to my radio. My mailbox is now
overflowing with requests for the mods (but no solutions to my problem
:-). As far as I can tell, I've been bitten by an unexpected
side-effect of the Mars->Ham mod (which is documented below).

Anyway, here it is: every mod I've ever seen collected and formatted
into a coherent whole. Hope you enjoy them as much as I have.

Brian McMinn brian@amd.com
Advanced Micro Devices N5PSS
Austin, Texas 1-(512)-462-5389
"You can't leap a chasm in two jumps."

-- snip here -- snip here -- snip here -- snip here -- snip here --

Yaesu FT-470 MODS
Rev A (Oct 17, 1991)

This is a collection of hardware and software mods for the Yaesu 470.
I have collected every mod seen on the net (ie. Usenet) since the
introduction of the 470, so I think this list is fairly complete. I
am interested in getting updates and corrections to this list, so
please send me e-mail if you find something that needs updating.
(This includes typos, wrong or missing attributions, caveats, warnings
about unmentioned side effects, serial numbers of radios that won't do
some of these mods, etc.)

This advice is free, so remember that you get what you pay for.

Brian McMinn (brian@nucleus.amd.com)

-=-

Full Reset:

Effect: Severe! :-)

1) Make hard (paper) copy of all memory info
2) Turn radio off
3) Hold down VFO and MR and turn radio on
4) Replace all memory contents

Notes: This will reset the auto repeater offset function, so
you will need to re-enable it if you use it. This will also
disable (mask) all memories except #1, so you will have to

enable each of them by hand.

Attributed: Yaesu

* This is the normal US configuration after MARS mod.
** This is the normal European configuration.

(Note: the receive only ranges are enabled by powering up the unit with the up and down arrow buttons depressed...kjm)

When there is more than one combination which has the same frequency range, the difference is the default step size and/or the default repeater offset. Of course, choices that do not match the VCO and filters do not actually transmit or receive on those frequencies. A particularly strange example is that the VHF side of the set can be set to tune from 404 to

444 MHz, but again, it won't actually lock. Even in the 101-141 mode, the VHF VCO will not lock - this must be for use with some other sort of VCO (It looks like this would cover the aeronautical band rather nicely.) There are two really wierd VHF settings, those for 8AL-242 and 1R3-158L. These must be for use with some other LCD controller - it displays truly unusual and non sequential thins when stepped through the "bands".

R74 seems to have something to do with selecting the IF frequency, or something similar. When set, it really screws up the VHF reception.

My technique for determining these straps is to remove the straps that come in the unit, solder wires to each pad, run the wires out of the unit to a bank of DIP switches, screw the unit back together, and then go through all of the DIP switch combinations. I usually use a stereo microscope and 30 guage wire for this. Since I didn't try powering the unit on with every combination of keys held down for each DIP switch combination, there may still be other secrets possible.

I was looking for something like receive and transmit from zero to infinity, but I didn't find it. I determined, from studying the schematic, that there should be a hiddem strapping diode from CPU pin 2 to CPU pin 22. I installed one, but nothing changed. In fact, changing it and powering the unit up did not cause a reset. Therefore, I concluded that this really wasn't a mystery strap, afterall. However, there could be others. I'm trying to get a data sheet for the CPU, from Hitachi, to see if any of the grounded pins are actually I/O pins -- they might be good candidates, particularly if their traces are routed in such a way as to be easily accessible for cutting.

I've learned that one of the ways to get some of the other, new Yeasu handhelds to go out-of-band involves dumping data out of the clone port, editing the data, and then dumping it back in. I called Yeasu and asked if the FT-470 could be cloned. They said no, so I ignored them. I haven't figured out how to get it to dump data, but I believe it will accept data. The clone mode is entered by powering up the unit with the F key held down. (It's also a neat way to see all of the indicators on the LCD!) The data must be presented in the ring ("right channel") of a stereo 2.5 millimeter plug which is placed into the mic jack. This is cryptically marked on the schematic, anyway. However, I have no idea what the format for the data should be. If you come across this, I'd love to know. This may be the trap door to getting the rig to receive and transmit in more interesting places.

Bugs: Above 500 MHz, some radios will let you tune up and down in frequency, some won't (they jump back to the ham band). Some radios will let you enter a frequency above 500 MHz on the keyboard while in memory tune mode, some won't.

Attributed: Darrell Sego KM9S

-=-=-=

7. The radio should now display 050.00 MHz.
8. Press F/M, then hold the up-arrow key to increase the
displayed frequency. Stop at 400 MHz.
9. Store this in the "L" memory. (See above steps...)
10. Press F/M then RPT then enter 0500 (5 MHz repeater offset)
then press RPT again.

- alternative procedure
- note: this short-cut requires you to enter 430.00 MHz
in step 1.

5. Press RPT twice for a "+" (plus) indicated
repeater offset.
6. Press REV once.
7. Press RPT twice to select the "-" (minus) repeater offset.
8. Press REV once. You should have 1030.00 MHz displayed.
9. Press F/M and hold the down-arrow stopping at 999.00 MHz.
10. Press REV once. You should have 399.00 MHz displayed.
11. Press F/M, then hold the up-arrow) key to increase the
displayed frequency. Stop at 400 MHz.
12. Press RPT twice to select simplex operation.
13. go back to #9 in previous list

Steps for setting the UPPER VHF limit to 200 MHz.

1. Program the frequency for 140.00 MHz *SIMPLEX*.
2. Press F/M, then RPT for the offset.
3. Enter the code 0000 into the keypad.
4. Shut the transceiver off, then turn it back on.
5. Press RPT twice (for a "+" (plus) indicated offset).
6. Press REV *ONE* time.
7. The radio should now display 1140.00 MHz.
8. Press F/M, then hold the down-arrow key to decrease the
displayed frequency. Stop at 800 MHz.
9. Press RPT twice to select the "-" (minus) repeater offset.
10. Press REV once. You should have 200.000 MHz displayed.
11. Press RPT twice to select simplex.
12. Store this in the "U" memory. (See above steps...)
13. Press F/M then RPT then enter 0060 (600 Khz repeater
offset) then press RPT again.

Steps for setting the LOWER VHF limit to 100 MHz.

1. Program the frequency for 140.00 MHz *SIMPLEX*.
2. Press the F/M, then RPT for the offset.
3. Enter the code 0000 into the keypad.
4. Shut the transceiver off, then turn it back on.
5. Press RPT twice (for a "+" (plus) indicated offset).
6. Press REV *ONE* time.

7. The radio should now display 1140.00 MHz.
8. Press F/M, then hold the down-arrow key to decrease the
displayed frequency. Stop at 1100 MHz.
9. Press RPT twice to select the "-" (minus) repeater offset.
10. Press REV twice. You should have 100.000 MHz displayed.
11. Press RPT twice to select simplex.
12. Store this in the "L" memory. (See above steps...)
13. Press F/M then RPT then enter 0060 (600 Khz repeater
offset) then press RPT again.

Notes: To use the higher frequencies you have to select the "U"
channel and press MR. This puts the handheld in the "MT" (memory
tune) mode. From there you can scan down or use the (DIAL) knob to
go to a lower frequency. ...Likewise for the lower frequency
memory. Any frequency selected using this method can be stored in
any memory.

My radio will not let me go up in frequency, only down. If I try, the
rig will default back to the original ham band. I had to be careful
when doing these mods.

One trick I found when initially setting up the VFO with the
expanded upper and lower frequencies is that in steps 5 (and 9) if
you select "+", pressing REV adds 1000 MHz to the display or
subtracts 1000 MHz if it has already been added. If you selected
the "-" (minus) repeater offset, pressing REV will subtract 400 MHz
if the displayed frequency is 1000 MHz or higher, or subtract 600
MHz if the displayed frequency is below 1000 MHz, until any more
subtractions would run the frequency negative, after which it
alternatively adds or subtracts 600. You can mix the up-arrow
down-arrow method with the "+ -" offset/REV combination to reduce
the time getting to the desired frequency. With these tricks, many
permutations can be found to get where you want to be very quickly.

I have discovered the code "5555" works as well as "0000" for the
enabling code.

-=-

Fix One-Way Tune Bug in Expanded Receive:

Effect: Allow tuning in both directions when software range extend
mods have been performed.

Due to a loophole in the tuning software, you may tune from the
current frequency towards the normal operating range (430.00 -
450.00), but not away.

Unfortunately, you are still subject to the "tune one way only"
syndrome. To bypass it, you must store some frequency in the "L"

memory. It doesn't matter what this frequency is, but it has to be below the "U" memory and, preferably, below any other frequency you want to use. You may store a very low frequency here too (0.00MHz).

BUT, the software isn't that dumb. To trick it, both the "L" and "U" memories must be filled and active (not set for SKIP), AND you must access the out of band frequencies from the MT (memory tune) mode, AND you must start from either the "L" or the "U" memory.

To use MT:
1) Press MR and select either the L or U memory.
2) Press MR again, a small MT should appear on the left of the display.
3) You may now tune with the arrow keys, Dial knob, or directly enter frequencies with the numeric keypad.

Attributed: kd6hr.El_Segundo@xerox.com (Pete McAfee)
[ed. It looks like Pete may have been the first to discover some of these neat tricks... any comments?]

-=-=-=

165 -29 dB
170 -38 dB
174 -44 dB

UHF:
freq: relative sensitivity:
400 no reading, nothing, -infinity dB
401 -40 dB
402 -38 dB
405 -34 dB
410 -27 dB
420 -9 dB
430 +1 dB
440 0 dB
450 0 dB
460 -17 dB
470 -26 dB

Results: The radio is good outside the ham bands, but the sensitivity really starts to suffer. I hear the local police at 460.375 quite well, so -17 dB is still usable, but not as good as a scanner would probably be. VHF down to 100 MHz or UHF down to 400 MHz is a fantasy. As I mentioned in another post, if the frequency ranges are extended too far, you start picking up signals at the wrong frequencies. National weather service (162.4) received at 119 MHz, coast guard channel 12 (156.8) received at 200 MHz, 2 meter repeaters received around 190 MHz and again around 182 MHz. Its hard to say just what the usable ranges are, but something like 136-165 MHz in VHF and 410-470 MHz in UHF, and even then its not great at the ends of these ranges.

Abhijit,

I am sending your requests to the appropriate ARRL deparments. You should
receive information about US/India reciprocal permits and information
about local ham clubs.

Others can contact the ARRL Regulatory Information Department for info-
rmation about reciprocal permits for any country. They have a package
of info available for each country. There is no charge for this package,
but a large SASE is appreciated.

Contact John Hennessee, KJ4KB at ARRL Headquarters.

If anyone needs referral to local clubs, local "elmers", ham
classes, or information for the prospective ham, contact the ARRL
Educational Activities Department. There is no charge for this service.

These departments can be reached at the telephone number or address
in my signature block or by sending email to 2155052@mcimail.com -
include postal address in all mail addressed to ARRL HQ because some
departments cannot reply by email.

An even worse problem is that copiers typically "magnify" differently in length than in width. I think this is mainly a paper-handling problem, and film behaves differently than paper... However, I have had some success making PC masks directly on LaserJet printers. My personal method uses paper rather than film because I had more trouble keeping large areas filled with toner on film than on paper.

Hell yes. The limits for 49 Mhz are either:
1) 10,000 microvolts per meter at 3 meters (field strength)
2) 100 milliwatts total project power consumption at the battery/power connection, with a fixed single element antenna 1 meter in length permanently attached to the project enclosure. (To paraphrase Part 15.235)

> and can I get a permit to run a broadcast service on 49?

While it's true that a lot of copiers need to be adjusted carefully to
produce 1:1 copies, most aren't because very few offices actually care
very much about the size except drafting and engineering offices. Knowing
this, very few techs actually take the time to set them closer than 2 to
5 %. Luckily, this makes little difference for most PCB art, however, and
I doubt very much that a 2 or 3 % difference in pin spacing will be
noticed at all when inserting say, an IC socket. Your mileage may vary.

As a TR-4C user, I'd be interested to hear an elaboration on the
"philosophy." Good rig, other than lacking RIT, CW selectivity,
general coverage receive, and no-tune finals; I'm curious how a newer
design rig matches it.

73,

David, AD8Y

>That exterior layer of Scotch 88 and Scotch-Kote still works like a
>jewel, though.

I have been told that I should Scotch-Kote my antenna as well as my coax connections. From reading Scotch-Kote can, Scotch-Kote is very non-conducting. Anyone know the breakdown voltage for Scotch-Kote? Does anyone else use Scotch-Kote on their antennas?

I picked up a book when I was in London last, titled Handbook for
Radio Operators put out by British Telecom International, and
published by Lloyd's of London Press.
It has the standard phonetic alphabet, and these phonetic digits:

code word spoken as*

0 nadazero nah-dah-zay-roh
1 unaone oo-nah-wun
2 bissotwo bees-soh-too
3 terrathree tay-ra-tree#
4 kartefour kar-tay-fower
5 pantafive pan-tah-five
6 soxisix sok-see-six
7 setteseven say-tay-seven
8 oktoeight ok-toh-ait
9 novenine no-vay-niner
decimal
point decimal day-see-mal

* Each syllable should be equally emphasised

#The book has tree, not three

They are not talking about the TR-4C; they are talking about the R-4C.
It is the receiver half of the T-4X/R-4C twins. I still have a pair
and I thing they are great (maybe because they are paid for :)).

Umm, before everyone attacks Peter, perhaps someone should mention that in the UK "pissed" means drunk and doesn't have quite the connotation it has for us Americans.

I recall an argument in alt.desert-storm about someone posting a story which included a quote from a British General to his troops to "keep your peckers up" which really means "keep your noses/chins up."

Let the flames begin!

3946. 8088 or 8086 Microcontrollers

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-17 23:35:00 UTC
From: AGENGCC@OSUCC.BITNET
Message-ID: <9110172342.AA07542@ucsd.edu>
Source record: 292411

-I'm looking for a Microcontroller based on either the 8088 or 8086
-for a project I've got in mind. The reason for looking for an
-808[86] based uController is that I'd like to be able to put both
-BIOS and DOS on it in ROM.

-My only alternative if these aren't available would be to find a
-source for cheap mini-XT motherboards (size is an issue).

-Processor speed isn't important (anything >DC should work :-)
-but it would be nice if it had a built-in serial port and possibly
-a disk[ette] interface.

-Does anyone have any ideas on sources for either of these?

The "WILDCARD from Intel is good start. And a call to John or
John at Anabooks can get you C source code for the Bios. These
guys are a very good resource for using 80??? as micro
controller. Their phone number is 800 462 1042. I have used their
8088 bios on a project and it worked very well. At one point we
had a computer booting off a floppy in 5 seconds flat. The final
product booted off of a network card.

I hear most people count them if needed: "You are five and nine -- one, two,
three, four, five, one, two, three, four, five, six, seven, eight, nine."
(Funny how some people end up repeating that so many times with a 59
report :-))

3949. female hams

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-18 02:50:06 UTC
From: oo7@ut-emx.uucp
Message-ID: <59573@ut-emx.uucp>
Source record: 292393

gary@ke4zv.uucp (Gary Coffman) insists:

> women stand out immediately on the bands.

I have a hard time recognizing them in the CW or RTTY bands, Gary - how do you do it? As I've mentioned here before, other people have this skill too - I just send my call on CW and the other person comes back "GE OM es tnx fer call", how do they know? Is it like having perfect pitch or something?

I also sometimes find it hard to distinguish them from younger male ops in a phone pile-up. I know of at least one now older ham who was on the air when of the pre-pubescent persuasion, and had to respond when the DX station said "the YL op please call again".

I find it easier and more natural just to treat the other person as a ham, regardless of age or gender, and not make assumptions about them.

No personal flame against Gary, except that assuming women only operate phone is a bit like assuming that only men can be hams...

3950. CQWW contest

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-18 03:05:29 UTC
From: oo7@ut-emx.uucp
Message-ID: <59577@ut-emx.uucp>
Source record: 292412

news@ucsd.Edu says:

(much good info and advice deleted)

>For instance, a UA0 counts for Asiatic Russia, but it can be in Zone 18,
>19 or 23. That causes you to work every UA0 you hear until you've worked
>all the zones.

Not really, you can tell the zone of a UA9 or UA0 from the first
letter after the number of the call. I think the only prefix that
is ambiguous is VE2 (which can be in the rarer Zone 2 as well as #5).
Of course, you only have to listen to one exchange to figure out where
the station is, and in 95% of the cases the callsign tells you exactly
what the exchange is (599 + zone number). Some people might object
to this, in that you don't have to copy a serial number, the op's shoe
size or age, but it does let you get on with the business of working as
many people as you can in a given time.

>The contest uses the ARRL DXCC Countries list plus, the WAE list. The later
>adds such goodies as GM Shetlands, UN1 and IS (Sicily) to the list of possible
>multipliers. ^^

This should be IT9 (Sicily). IS0 is Sardinia, already a separate country.

>The rule of thumb is to be on the highest frequency band that is producing
>the best QSO rate. It is no more intimidating than that.

Sort of true during the daytime, I guess, but at night you want to
explore 160 and 80m, rather than work all those boring old countries
like ZA on 20m. That is, if you are doing things semi-seriously
and are equipped for those bands. This contest is a great one for
achieving 5-band DXCC, 5-band WAZ, 160m WAC etc.

>If you are going to enter, no matter how small your score, I
>encourage you to submit your log. You never know when you might
>be the only one in your category and wind up with a nice certificate
>to hang on the wall!

Have to agree with that. To finish off my 160m WAS, I worked a
couple of hundred stations in the ARRL 160m contest. Turns out that
without trying, I won South Texas in the low power section (< 150 W),
and got a nice certificate from the ARRL to prove it. I beat out 3
other people in my class...

>Tom Taormina, K5RC
>Editor, National Contest Journal, taormina@asl.sinet.slb.com

Thanks for posting the rules and comments, I'm glad someone did!
They are also, of course, listed in CQ Mag and QST each year -

3952. Re: Sealing RF connectors

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-18 06:05:49 UTC
From: brian@ucsd.Edu
Message-ID: <44148@ucsd.Edu>
Source record: 292421

I use GE "High Voltage Splicing Tape", which I can get out-of-date at the local electro-junk store - the power company dumps their stock of it pretty religiously when the expiration date rolls by. It's a gooey soft rubber tape that exudes uncured vinyl goo when you stretch it, and hardens into a solid rubber mass after a day or two.

Overwrapping that with real Scotch electrical tape makes a nearly permanent joint - when I have to undo one of these, I cut it off with a knife rather than try to unwrap it. A good shot of electronic-grade Krylon finishes it up - I used to use the "international orange" paint so I could find the joints in the cable real easily - and tell my cables from the other dude's on the tower.

If it's a connector that's on the bottom of an antenna or some place where I can't be sure of a real airtight seal, I squish some Dow "High Vacuum Grease" (a very thick silicone grease) into the connector before I put it together, so that moisture can't collect in there and corrode the contacts, or worse, freeze and rupture the connector.

Climbing a 100 foot tower on top of a 6000 ft mountain in the middle of a snowstorm with 6 inches of radial ice on the struts because the ambulance company is off the air is more fun than I like to have nowadays.
- Brian

I read this thread with interest. Personally i dislike 'funny' phonetic renditions (I only use the ICAO-recommended set) particularly when you have to remember that to people whose native language is not English, the 'funny' phonetics just get in the way.
Maybe you Statesiders have it easy; us Brits have a rich spectrum of languages (30 or 40 of them!) within a few hundred miles to the east.
Now certain callsigns can have nice combinations of letters/numbers; how about having 5Z4GT as a call? Thats one *I* would just *love*!
(for neophytes, 5Z4GT is the serial number of a power rectifier tube....)

That would be fine if one was interested in a base station, but I have a
feeling that Leo wants a handheld. I, too, bought an AOR 1000XC because of
its portability, but more so because of its wide continuous coverage. However,
I was not impressed with the unit after using it a couple of weeks. First,
the user interface is terrible! I had to devise a quick reference card to keep
with me. Second, the only AC power source available is in the form of a
charger that you can only use if you have NiCads installed. I didn't always
want to charge the NiCads when I used the external power source. Third, the
BNC connector would wiggle as antenna moved from side to side. Fourth, the
display was TERRIBLE! It was covered in some sort of protective coating which
made it very difficult to see. Also, the only was I could get a good view of
the display was to look at it as if it were laying on its back. I went out and
bought a right angle BNC connector so I could lay the unit on its back when I
was at home, just so I could see the display when I heard some activity.
In general, I never gained enough faith in the unit to justify keeping it. I
sent it back before my 25 day trial period expired and bought Icom. I'm
quite pleased with my new purchase. For those of you who are wondering which
Icom unit I bought, I bought the IC-2SRA. It a combination 2m HT plus a 25-950
mHz continuous coverage scanner in one unit.

Greetings,

I'm trying to decide what type of 2m antenna to use with my car. Drilling holes is out. I'll probably go with a magnetic mount, but I'm concerned with scratching (the car, not the antenna). Well, to get to the point, does anyone have experiences with antennas that clip to the side window of the car. One such antenna is by Mobile Mark, number OWP 150.

If you have thoughts about this type of antenna you'd be will to share with me, please send me e-mail. No need to post to the net.

Thanks.

<< Many lands, one World ! The Guides and BoyScouts of Genova
say CIAO ! to all Scouts in the World. We enjoy to be Scouts! >>

Hi and TNX for reading this message!

The 1991 J.O.T.A. is on and also this year (the tradition began
more than 20 years ago) the Genouese Group of A.R.I. (Amateur Radio of
Italy) will open the doors to the Scouts Groups in Genova (both of them,
A.G.E.S.C.I. and C.N.G.E.I).

We will be active on usual HF Scout QRG and on VHF, UHF on
Voice, CW and Digital mode.

Please help us to let HAM RADIO known at the best to our Scouts,
call us and QSP this message answering as soon as possible.

We will try to talk to you on pursuit of exchanging friendship
and knowledge of ours countries and demonstrate willingness for a
World in Peace and Harmony.

Happy Radio-Scouting in 1991 JOTA !!

>

Heck, I've had foreign DXers get totally confused with STANDARD phonetics on my call. I used to use the standard Alpha Alpha Four Lima Romeo, but Lima was always confused as Kilo or somthing else by English-speaking hams. Romeo isn't as good as Radio, so I use London Radio almost exclusively.

Radio usually gets through, but I can't even count the times I've been identified as Papa Alpha Four Kilo Radio.

Of course, there's Always Alert Four Little Radios -- or around Christmas, Always Alert Four Little Reindeer. :-)

>frequency? What reasonably priced equipment do you know about that uses
>voice synthesis to guide a blind operator?

>Jerry Lambert N4BAO

You might consider one of the older crystal controlled rigs. These
have fixed frequencies determined by the crystal in use--some with
12-16 possible choices. Counting from the stop would yield the
desired repeater frequency. Likewise, an all-mode rig such as the
Kenwood TS-700 have up to nine crystal controlled frequencies with a
twelve watt output.

Many synthesized rigs can have the frequencies preset, but the
selector switchs generally don't have a stop, so the counting trick
doesn't work. Of course, as experience is gained, your mother would
probably be able to identify where she is just because of the users
on the frequency.

There is no current production equivalent to the TR-4C. The IC735 comes closest in philosophy and performance. The 735's receiver is slightly better than the best of the old Drakes, the R4C. It's smaller and much easier to use than the TR-4C. But it only runs 100 watts out and has fixed tune output requiring an antenna tuner in many cases. 200 watts seems to be the upper limit on current production radios and fixed tune outputs are the rule, though a couple have builtin antenna tuners.

IMHO the IC735 is the best value on the market today. It's closest competitors all cost at least twice as much for very little extra performance. I discount the IC725 and FT747 as being clearly inferior.

3971. jeep fuel injection problems

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-18 17:14:37 UTC
From: jrt@mbunix.mitre.org
Message-ID: <9110181714.AA29068@mbunix.mitre.org>
Source record: 292342

To the net: A ham friend has recently installed his HF rig in his new "little" jeep (by Chrysler) and is experiencing an interesting problem. Although his 2 meter rig works fine the HF rig apparently disagrees with the jeep fuel injection/engine control and kills the engine when he keys up the rig. Since my fuel injected Volvo is 21 years old and I have no similar problem I'm not able to assist him beyond the typical "ground everything" and "get the SWR down" answers. Does anyone know of a solution to this problem

Thanks...Jim KC0EL

>>>problem such as coax carrying RF I suggest that if the electrical length
>>>of the line is on the order of at least one eighth of a wavelength
>>>(half of a quarter wavelength) then it would appear to have the
>>>characteristics of a transmission line (like a characteristic impedance).

From an engineering perspective characteristic impedance is very much dependent
on frequency. In my job I am involved with noise and EMI, I sometimes get
cynical when someone asks me the characteristic impedance of a cable, I ask at
what frequency. I usually look up the specifics of the cable I am using and
then use a formula. With graphics I will type:

Zo = square_root((R + jwL)/ (G + jwC)) R is resistance per unit length
G is conductance per unit length
jwL is inductive reatance per unit len
JwC is Capactive reactance per unit len

Since reactance is a function of frequency, your question is valid. You would
have to supply the exact paramters of the cable you have. They all are
different. I don't the exact the design frequency of RG but may be in the
cable vendors specs.

>with the call TV6FS (if memory serves correct; certainly the prefix was
>TV) in a pileup on 10 meters. Despite repeated questions about the QTH
>from stateside amateurs, the best that the operator would come up with
>was 'Utah-Eu 32'. My guess is that 'utah' was a phonetic for the letter
>'u'. I note in the ARRL Operating Manual that the TV prefix is assigned
>to France and the operator's QSL manager was in France. Does anyone
>know who/where this station was?
>
>Richard Eckman KD4AUS
>NASA Langley

Sorry, I'm way behind on info-hams as I've been getting ready to take
the general tast this Sunday! So little free time! :-)
I heard something similar on cw. Though my french is rusty, I took
the qth to stand for UTAH, Etas-Unis (EU french abrev. for United States).
(get it: states united?) I caught this in the middle of a qso on a freq.
I couldn't transmit on so I just kept on tuning thinking about french
diplomacy: "I am right... You are wrong." :-) If I would have caught the
call sign, I would have listened longer!

John Hennessee, KJ4KB, ARRL Regulatory Information Branch Handihams
liaison has an information package from the Handihams organization.
It contains information about Handihams plus reprints of QST articles
about equipment designed to help with disabilities.

Email sent to 2155052@mcimail.com will be printed and sent to ARRL
staff that is not on our internal network. Indicate that you are
looking for the Handihams package. Include your postal address with
email correspondence to ARRL HQ.

These phonetics are useful in several ways, working a spanish
speaking station in less than optimum conditions and having
to repeat your call several times. Hearing DX and knowing
at least the phoentics will allow you to call at the end
of the QSL. This has produced 3 new ones from the small
French speaking African countries for me.

Private note: Sharon, can you add some more? I have French,
Italian, and Portuguese in addition to those listed above.

takk mye, kuu miin, hay hay.

I now return your keyboard.

Ross,
If you get a positive response to this, could you send a copy to
me? I have a fortran translation of the mininec3 basic program but,
since the graphics is non-existent (and I'm no fortran hacker) I havn't
used it. (I ran it through f2c but the c code looks like it!)

regards,
Michael

AMATEUR RADIO EXAMINATION OPPORTUNITIES

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Email may be sent to the ARRL/VEC at:

bjahnke%arrlhq.UUCP@uhasun.hartford.edu

or

MCI MAIL ID: 215-5052

You should include your postal address (the slow kind) in case we need to send you non-electronic material in answer to your question.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

>In article <28819@nntpd.lkg.dec.com>, gettys@regent.enet.dec.com (Bob Gettys N1BRM)
writes:

>Oh yeah.... Almost forgot the IC-22S, the world's worst synthesized 2m rig
>since the Heathkit Amateur transceiver/Aircraft band spread-spectrum beacon.
>The best thing you can do is throw away the synthesizer board and put in a
>crystal oscillator. They can be made to do 10Khz splits, but you get lousy
>lock characteristics at the low end. Frequency range is about 144.9 (if you're
>lucky) to 146.76 when the mod is made. Have a spectrum analyzer handy when
>retuning. It squirrels easily.
I have an ic22s which is very well behaved. I have modified the unit to
go from 144.6 (or so, I can't quite remember how low) to 147.99. I put in
a very easy mod to make it go in 5 khz steps... yes the diode programmable
board is a bit of a pain sometimes but the price was right. I use mine
mostly for packet operation at home.

Look, ordinarily I ignore stuff like this, but this time I just
have to know: Is it just me, or is Rob Henry, Future Fellow Ham,
getting to be a nuisance?

3982. Re: Coil WInding HELP-For Shortwave receiver

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-18 19:48:08 UTC
From: perry@hpfcdc.HP.COM
Message-ID: <39910141@hpfcdc.HP.COM>
Source record: 292366

If I remember the adhoc formula, L = n^2*d^2/(18*l+40*d), where n = turns, d = coil diameter, and l = coil length. So, it isn't too critical if the coil turns out slightly longer, although you may want to increase n to compensate.

To wind a coil, I put a hole in one end of the form and pass the wire through a couple of times so it doesn't slip. Then I tie the other end of the wire to a doorknob and roll the wire onto the form. This prevents kinks and twists. I've heard that you can use an electric drill to rotate the form, but I have never been that brave. Buy at least three times as much wire as you need, because you won't like the first couple coils you make. :-)

One source for coil wire is at electric motor repair shops. The local one charges about $4/lb, which is a *lot* of wire.

Have fun, and like a previous poster said, remember it's just a hobby.

(stuff unrelated to article title)

Please use discriptive titles on articles. I, and probably most readers of this group, don't have time to read all articles. I usually pick and choose from the list of titles that you get from the "=" key in the rn program.

Thanks 73s

Forget it. Why should allegedly non-profit (sure they're non-profit) organizations, religious businesses, or nay other non-amateur organization have ANY access whatever to amateur frequencies? If they need communications (not during an emergency) let them apply for a business band license like everybody else. As a Canadian, I don't mind sharing the spectrum with fellow hams, but I'm sure as hell not going to put up with businesses on the ham bands....

>
>Steve KA6S

There were at least four versions. The IC-22 and 22A were two different
beasts. I have a 22A; the 22 preceded it. I don't know what differences
there were between them. Both were crystal controlled.

3990. US amateur operations in Germany

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-18 21:56:35 UTC
From: jollis@apollo.hp.com
Message-ID: <1991Oct18.215635.5580@apollo.hp.com>
Source record: 292341

I have just accepted a transfer to a position in Germany and was wondering if there is anybody out there who could provide me with information on reciprocal operating privileges for U.S. amateurs in Germany. Specifically I have the following questions:

1. Will I be able to operate on a reciprocal permit or will I need to take a new test?

2. Will I be permitted to take radio equipment with me?

3. Is there a tax on the operation of amateur stations in Germany?

4. What government entity do I need to work with to obtain the required permits?

5. Is there any other important information that I should have but haven't asked?

I'll be moving in the beginning of the year to Bo:blingen (near Stuttgart). Any help will be greatly appreciated. Please reply direct as I don't generally have the time to read this newsgroup on a regular basis.

3991. VR200/VR6 certificates?????

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-18 22:07:29 UTC
From: holly@hpcupt1.cup.hp.com
Message-ID: <73190041@hpcupt1.cup.hp.com>
Source record: 292308

Last year Pitcarin Island celebrated the Bicentinial, and as part of the celebration, there was a special VR200 station on the air. Working this station made a person elgible for a certificate.

I am curious if anyone that ordered a certificate received one. If you did, please e-mail me when you got it. If you sent for one, but did not receive it, please e-mail what you did on follow up. I am especially interested if anyone sent the manager a return-reciept letter inquiring as to the status of the certificates and recieved a reply. The best I can determine at this point is that no one has received a certificate and the manager has not responded to mail inquiries.

My last QSO with this special event station had a QSO number in the 5000's, and since the certificate cost was $5, there is a potential of a fair amount of money being collected.

Thanks for your time
Jim, WA6SDM

The original poster did ask about the R-4C, and i confused things by asking about the TR-4C.

3994. PC Board Transfer Film

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-18 23:48:00 UTC
From: AGENGCC@OSUCC.BITNET
Message-ID: <9110190001.AA07904@ucsd.edu>
Source record: 292343

DC Electronics Arizona stocks the stuff 1 800 423 0070 they also stock NE602 mixer chips.

For small boards I don't have any size problems. I just tape the sheet of transfer film to the board so the film can hinge back out of the way and heat the real clean copper side of the board with a cloths iron set pretty hot almost full on, and flip the sheet on the board and use a rubber roller to transfer the resist. It works good up to about 4 by 6 inches.

Message-ID: <1991Oct19.005433.7835@voa3.VOA.GOV>
Source record: 292354

___Results of the 1991 Maryland/DC QSO Party

This year the watchword was fun. Almost every log contained positive comments. On the other hand, Mother Nature gave us a major solar flare the day before which made distant contacts on ten and fifteen meters difficult at best. We persevered. Although the West Coast was shut off of reasonable competition, those in the Eastern US had a good time. WA3NAN, the Goddard Space Flight Center ARC, successfully defended its club championship and new titles were established in all other categories. Carl, WA9PQY, who was second in the US division last year, took this year's top single op award. He will receive a certificate and a Maryland souvenir for his efforts. KD3RJ, also a good competitor from last year, rose to the top of the Maryland ranks. He will also receive a bonus prize for his efforts. Congrats to all winners.

Comments:

This is my first contest. Thanks for letting me be part of the party. - N3JFF; Hope conditions will be better next year. - K4GSX; I had fun at your party. - KC3LM; Thanks for a most enjoyable event. - W4KM; Wish conditions were better and I had more time. - W3ABC; Good contest this year. - W3DQI; It was an interesting contest. - W3FZT; For me it

was like Field Day without the bugs. - WB3FTQ; Thanks for sponsoring this FB event. - N2US for WA3NAN; I had a lot of fun this year, except for the QRN from Hurricane Bob. - N3EHD

The sponsoring station, W3CWC, made 208 QSO's with KA3SDJ and WA3EOP operating the station.

3996. Voice of America 50th Anniversary QSO Party Announceement

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-19 01:12:07 UTC
From: eab@voa3.VOA.GOV
Message-ID: <1991Oct19.011207.8498@voa3.VOA.GOV>
Source record: 292355
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

THE VOICE OF AMERICA 50TH ANNIVERSARY QSO PARTY

The Voice of America will celebrate its 50th anniversary in February, 1992. This contest is designed to promote this celebration and help to make the amateur radio community and short-wave listeners, worldwide, aware of the many amateur radio operators and amateur radio stations that are affiliated with VOA.

OBJECT:

The object of the VOA 50th Anniversary QSO Party is to log as many Voice of America related amateur radio stations around the world as possible in the given time frame. This includes the VOA Amateur Radio Station at headquarters in Washington, DC, K3EKA, as well as stations operated by active, retired and former employees of the Voice of America, the U.S. Information Agency, the U.S. Department of State, the Agency for International Development and Radio Free Europe/Radio Liberty.

DISTINCTIVE STATION DESIGNATIONS:

All VOA amateur stations operating in the U.S. during the contest will add the suffix "/VOA" ("slash VOA") when they sign their call. Stations outside the U.S. will announce that they are "VOA 50th Anniversary" stations.

DATE/TIME:

The contest will be held from 0000 UTC February 1, 1992 through 2359 UTC February 29, 1992.

POINTS:

Voice of America or related amateur radio stations will be worth one, two or three points as designated by the contest committee. All other stations are worth no points.

There are NO multipliers in this contest. If a VOA station is worked or heard on one band or mode, it can not be counted again.

EXCHANGE:

A two-way contact may be counted with the exchange of call sign, signal report, QTH (state, province, territory or country) and point value.

A one-way contact (SWL) may be counted with the call sign, signal report, QTH and point value of the station heard.

Mixed logging of two-way and one-way exchanges on the same log IS ALLOWED.

Note: SWL entries ARE encouraged!

SUGGESTED FREQUENCIES:

This contest is open to all amateur radio frequencies. Regular Voice of America broadcasts, even if they are within the amateur radio allocated frequency bands, do NOT count in this contest.

The suggested frequencies are (+/- QRM):

Phone: 3920, 7260, 14316, 21416 and 28416 kHz.

All other modes: 3550, 3725, 7050, 7125, 14050, 21050, 21150, 28050 and 28150 kHz.

AWARDS:

Every amateur radio contact made with the headquarters station, K3EKA, will be sent a special VOA 50th Anniversary QSL card. In addition, certificates will be awarded to highest scoring amateur and SWL stations in each DXCC country, U.S. state and U.S. or Canadian territory or province. Additional awards may be issued at the discretion of the contest committee.

LOGGING:

List the VOA amateur radio station worked or heard, the date and time (in UTC), the signal report sent and/or received, the QTH sent and/or received and the point value received.

SCORING:

Add the total number of points as listed above. This is your final score.

SUBMISSION OF LOGS:

All entries in the contest must be sure that their logs are received at VOA Headquarters no later than April 30, 1992. Any entries received after that date may not be considered. Include your name, address and call sign (if applicable). Attach a note if you would like to receive a complete listing of the contest results. Send all entries to:

Voice of America Amateur Radio Club
K3EKA
330 Independence Avenue, SW
VOA Mail Room - Code 73
Washington, DC 20547

Attn: Contest Committee

The decision of the contest committee on issuing awards is irrevocable.

ADDITIONAL INFORMATION, QUERIES OR COMMENTS:

Address your requests for additional information, copies of recommended optional log forms, queries or comments to the contest committee at the above address or via e-mail on the Internet to:

3997. Address Change and the New FCC Laser Printer

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-19 03:20:54 UTC
From: 6947P%NAVPGS.BITNET@cornellc.cit.cornell.edu

Source record: 292359

Whomever asked for the info about address changes and the FCC got
a super synopsis of everything you need to know in Paul - KD3FU's
reply.

Two additional notes:

I'm military, and have been stationed all over the place.
I just fill out the FCC 610 and give the FCC my new address and they
have not changed my callsign (even when I gave them a Germany address!).
Not changing callsigns is less work for Gettysburg.

Second, I just changed my address from Virginia to California and I recieved
the new laser printed licenses like Paul talked about. There's a little tiny
caveat in the remarks that says to laminate your wallet version of the license.
THEY MEAN IT. The laser print comes right off. The 5x7 wall certificate is
very nice. 'bout time!

This mod is only intended for experimental applications only! Know what
freq you are on and don't use this mod if you are not for sure.
The TM-421a is capable of transmitting from 136 to 174 MHz when the following
modification is performed. The transmitter specifications will vary from
published in-band specifications.

1. Remove the top and bottom covers from the transciever.
2. Remove the knobs from the front panel.
3. Remove the nut from the mic jack and the nut from the channel selector
switch.
4. Remove the 4 screws that secure the front panel to the body of the
transceiver
5. Pull the front panel off the transceiver to expose the Control board.
6. Remove the 3 screws from the Control board. Gently pull the board off
the transceiver.
7. Cut the GREEN jumper wire on the Control board.
8. Install an MA141A chip diode or 1N914 diode as D209 on the Control
Board.
9. Reassemble the transceiver by reversing steps 1 - 6.
10. Reset the microprocessor by holding in the MR key as power is turned
on.

I haven't tried or verified this, proceed at your own risk. WA2ISE
And do not transmit outside of legal bands!

3999. Daily Solar Geophysical Data Broadcast for 18 October

SPECIAL NOTE: A large proton burst at greater than 1 MeV at geosynchronous altitudes began at 18:15 UT, peaked at 630,000 counts per sec*cm*cm*sr at 18:55 UT, and ended at 21:05 UT. This is the primary reason for the abnormally large fluence values for the 1 MeV protons given above. No enhancements with protons at greater than 10 MeV were observed so this was primarily a low-energy event. This was one of the largest proton bursts at greater than 1 MeV observed so far this year.

4000. Re: Antenna Connection Seal

>Has anyone tried heat shrink tubing and if so, what were the results?

About 4 years ago, a friend moved to the area and taught em the best method I've ever met for coax connector seal. It requiresthe following components: Scotch 23 Splicing Tape (NO! NOT 33 or 88! NO PVC TAPE ALLOWED!) and a can of ScotchKote.

Technique: Place a single, overlapped layer of Scotch 23 over the entire connection, extending at least 3/4-1 inch past the coax/connector interface. Paint over liberally with ScotchKote. Allow to dry for a few minutes, then continue with the antenna party.

I've pulled connectors off that I made 3-4 years ago and they're still clean and shiney, no mean feat in Houston's corrosive atmosphere. I've also pulled off connectors he had covered in this manner over 8 years ago, still shiney.

re: PVC heat shrink: Yep. Tried it a while back. Before I learned the method I just recounted, I had used one of the non-contaminating RTVs that cures without acetic acid liberation, covered by heatshrink. That works pretty well, excludes moisture, etc., but it's a bear to get off the connection cleanly. The Scotch 23/ScotchKote method is just a knifeblade away from clean removal.

=========
SpaceNews
=========

MONDAY OCTOBER 21, 1991

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for unlimited distribution.

* GALILEO STATUS REPORT *
=========================
October 16, 1991

Forwarded from William O'Neil, Galileo Project Manager

The Galileo spacecraft is operating normally in the dual-spin mode and
transmitting coded telemetry at 40 bps.

Today, the playback of the third optical navigation image (OPNAV#4) will
continue. By end of day, more than 50 percent of the image will be retrieved.
Additionally, an imaging instrument (SSI) memory readout and an RPM (Retro
Propulsion Module) thruster maintenance activity are scheduled.

Tomorrow, the playback of the optical navigation image will continue.
Also a planned routine command will be sent to reset the command loss timer.

[From: Ron Baalke @ JPL]

* AMSAT-OSCAR-21 NEWS *
======================
AO-21/RS-14 was recently powered down in an attempt to cure a
self-oscillation problem occurring in Transponder #1's receiver.
After the transponder was turned back on, the oscillation was found
to have vanished! The RUDAK transponder is also now fully operational.

* SARA NEWS *
============
If you've been trying to listen for SARA and have not had any luck, be
advised that the operating frrequency for SARA is 145.955 MHz (not .995!).
G3IOR reports that signals are weaker than those from UoSAT-OSCAR-11, but

can be copied with a low-noise receiver front end and a 10 element yagi antenna.

* PACKET DISTRIBUTION NEWS *
==========
The effectiveness of the SpaceNews electronic mail distribution list was evaluated last week with a short test message appended to last week's SpaceNews report. The distribution list consists of Amateur Radio operators around the world who have volunteered to help speed SpaceNews distribution on the amateur packet radio (AMPR) network.

Although test messages are still being received on packet here are results so far. All dates and times indicated are in UTC and reflect the date and time the confirmation messages were received via packet at NN2Z.NJ.USA.NA:

>As a TR-4C user, I'd be interested to hear an elaboration on the
>"philosophy." Good rig, other than lacking RIT, CW selectivity,
>general coverage receive, and no-tune finals; I'm curious how a newer
>design rig matches it.

Well I was really thinking of the R-4C when I wrote this. What I meant was that Drake went the extra mile to make the receiver work well in the presence of strong adjacent signals and work well near the noise floor. The 735 does too. Back to the TR-4C for a moment, it was a relatively sophisticated radio in a rather small box for it's day, a fine mobile rig as well as a fixed station, as is the Icom for it's day. While general coverage receive was not standard on the Drakes, you could add coverage nearly anywhere in the HF region by adding auxillary crystals. I regret the manufacturer's decision to move the tuning controls into an external box on today's rigs. It just adds more clutter to the installation.

>know? Is it like having perfect pitch or something?

I find they send CW better and spell better than the average male ham. They also often offset 1000-1200 hz instead of the male 400-800 hz. On RTTY they rarely want you to immediately send your collection of "art".

>I also sometimes find it hard to distinguish them from younger
>male ops in a phone pile-up. I know of at least one now older
>ham who was on the air when of the pre-pubescent persuasion,
>and had to respond when the DX station said "the YL op please
>call again".

Funny, I haven't been fooled this way. I must have an extraordinary ear for the female voice. I'm rarely fooled by long haired males on the street either. :-)

2800 Meadowview Rd., Sacramento, CA 95832 (916)427-4281
RACESBUL.192 DATE: Oct. 21, 1991
SUBJECT: Technical - ALE
The following was submitted by Nathaniel McMillian, NTIA/ITS.
Federal Standard 1045 (FS 1045) defines Automatic Link Establishment or ALE as the capability of an HF radio to initiate a circuit between itself and another radio without operator assistance and usually under processor control. As the Federal community moves more toward ALE, not only will HF radio operations become more efficient, but the capability of shared HF radio resources (or SHARES) will be enhanced. A review of some of the basic features of ALE will demonstrate its potential.
An ALE radio is designed to continuously monitor an HF network or networks on up to 100 predesignated channels. Upon detecting an incoming call, ALE tunes the transmitter, sends a reply to the caller, and waits for an acknowledgement. Once the acknowledgement is received, the ALE sounds an alarm announcing the incoming call, activates the speaker, displays who is calling, on what frequency, in what mode, and waits for operator intervention. After the transmission is completed, the ALE units returns to monitoring the predesignated channels. If the incoming call is for data traffic, the controller automatically routes the call to a data terminal without operator intervention. For outgoing calls, the operator tells the controller the destination station or stations and the desired mode of operation. The controller picks the best available preprogrammed channel, completes all the tuning and handshake work and, when the link is established, waits for operator intervention. Besides simple network monitoring and linking, ALE also provides for linking all stations in a network with a single call; or automatically responds to a net, or multiple net, collective call.
With ALE, most of the work is efficiently done by the processor, leaving the operator free to do other things. As impressive as ALE is today, additional features are under development. These features include automatic networking,

```
automatic message store and forward, anti-interference, privacy,
automatic relaying, and automatic networking with other media.
EOF
```

4007. Two-Line Orbital Element Sets

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-19 18:40:10 UTC
From: tkelso@galaxy.afit.af.mil
Message-ID: <tkelso.687897610@galaxy.afit.af.mil>
Source record: 292317

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (513) 427-0674, and are updated several times weekly. Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (updated weekly) and some documentation and software are also available via anonymous ftp from blackbird.afit.af.mil in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space and rec.radio.amateur.misc. This week's elements are provided below.

OR the repeater ID OR a distinctive courtesy beep and maybe even the hang time. There are lots of audible clues. You even have the sound of the squelch in the repeater receiver kicking in, which ranges from who-knows-what receivers that go ssshhhhhhhhhxt to things like micors that go -tic-.

I can only give you a partial answer. The bill to extend unemployment benefits past their normal limit (26 weeks, I think) which was vetoed by President Bush was originally going to be paid for by revenues arising from sale of spectrum. I believe that this "excess spectrum" was going to come from spectrum now assigned to the federal government but underutilized and hence considered excess. The proposal to sell the spectrum came from the Senate side but the House opted for another approach (treating the expense as a general expense, I think) but President Bush called the expenses "budget busting".

Probably, the idea of selling spectrum will come up over and over until it passes.

Even bigger nit - Channel one was only 4 megs wide. That was one of the reasons that it was dropped so long ago as it was only big enough for a b&w signal. Over in europe, it is a lot more recently that channel one was dropped and hams have gained 6 meter priveledges.

One of the things in the 48-50 segment is the cordless phones and baby monitors.

SPECIAL NOTE: Another large proton enhancement at greater than 1 MeV was observed today, beginning at 17:05 UT. The enhancement began as a very sharp increase in flux and is in progress at the time of this writing. The maximum observed so far occurred at 01:50 UT on 20 Oct, with a count rate of 1,100,000 counts/sec*cm*cm*sr. This is the reason the fluence values at 1 MeV (given above) are unusually high. Protons at 10 and 100 MeV have remained at background levels. There is some uncertainty regarding the accuracy of these proton measurements. Unless otherwise noted, proton data will be assumed correct.

4013. Help: RS-232 and IC-73x Radios

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-20 09:00:07 UTC
From: hatzakis@fovea.St
Message-ID: <HATZAKIS.91Oct20100007@fovea.St>
Source record: 292282

I havethe interface for connecting ICOM 731 (same idea as IC-735...)
to computer. Computer and ICOM are talking and have the specs for
the packet communication, unfortunately writing the program for
some usefull utility is a bear. Does someone have or know where
I could get a decent program for doing this control ?
Thanks, Mike (send directly to HATZAKIS @ SUMEX-AIM.STANFORD.EDU
since there is a problem with my address on GNU's)

>else's opinion, too !!

Jerry, I've never used a 767 but friends who have seem to like it. The reasons that drew me to replace my Drake Twins with the IC-735 are many. Primarily I bought it because the receiver is the first I've used that is better than the R-4C in a reasonably priced solid state rig. Synthesiser noise is low, passband tuning works well, strong adjacent signals don't overload it, and it is very stable. General coverage was a nice bonus. The radio is very small, but the controls are easy to use and laid out well. The transmitter thermal design is superb with long keydown times causing the radio to be barely warm to the touch. And it has transverter jacks for my VHF/UHF weak signal work.

I've used it mobile, portable, and as a piece of bench test gear. It serves well as a signal generator and communications monitor. In addition it serves as my main base rig on HF though I do still use my B&W-6100 and Drake 2B for dedicated RTTY. Things like TS950s and IC-781s are much more expensive for very little improvement in basic capabilities and radios like the IC-725 and FT747 are stripped down radios lacking some of the features I require such as good narrow filters, passband tuning, and transverter drive capabilities. I don't know where the FT767 fits into the scheme of things and don't currently feel the urge to shop for anything to replace the IC-735. My one complaint with the radio is the cheap plastic door covering some of the controls on the front, I removed it.

>I also sometimes find it hard to distinguish them from younger
>male ops in a phone pile-up. I know of at least one now older
>ham who was on the air when of the pre-pubescent persuasion,
>and had to respond when the DX station said "the YL op please
>call again".

At first, I thought it was kind of neat because I could crack pileups (not to mention my voice), but after a while it became an affront to my 12-year-old manliness and I began boycotting the "QRZ the YL" solicitations during pileups. But ultimately I couldn't win: when I would finally crack the pileup in my own right (superior signal or whatever), the DX station would say "ah yes -- that was the YL station I was looking for! Blah blah blah."

I especially remember some of the Europeans getting caried away and saying "me and my friend Rolf here in the shack wish you 88s, dear" and insane stuff like that. Of course for the particularly bad ones, my "Elmer" had already coached me to say "you can have me if you can catch me."

RTTY DX Notes 1of3 10/18/91
RTTY DX Notes for week ending October 18, 1991
BID: KT7H291
Part 1 of 3.

>From reports received it gives the appearance that the bands have been
very active this week, even to the extent that some mailboxes have
been appearing on 10 and 18 MHz bands. Now that's very interesting,
and it proves that some people do really think. I noticed one mailbox
passing large amounts of traffic on 10 MHz with great ease and no QRM.
Maybe others will follow. There is still a little problem from some
packet stations drifting down band. Now that's real naughty, chaps.

Our thanks this week go to DJ3IW and the DB0SPC DX Packet Cluster,
IK5AAX, I5FLN, K4FJ, OD5NG, TG9VT, VK2EG, WB2CLJ, W2FG and the
Tristate DX Packet Cluster, and W2JGR and the Twin City DX Packet
Cluster. Thank you all for your very interesting and entertaining
reports. After Albania we can all relax a little.

SB DX @ ALLBBS $KT7H293
RTTY DX Notes 3of3 10/18/91
RTTY DX Notes for week ending October 18, 1991
BID: KT7H293
Part 3 of 3.

QSL Information.

RC2VQ/UA0I is at Box 1145, Magadan 685000 USSR.

CRKL Kurt Nygren collects his cards from Box 2524, Maputo, MOZAMBIQUE.

5J500/D1 QSLS via the HK bureau.

KP2N is via WA4WIP.

XQ0X QSLS via CE3ESS.

RA9UK is at Box 73, Osinniki, Siberia 652810.

6W6JX says to send his cards to Box 10, Kaolak, Senegal.

TJ1GG cards are processed by I2EOW.

ST0DX has WA2NHA as his QSL manager.

EM2W cards go to WB2RAJ.

HK3CAA/HR1 cards go to Box 3591, Tegucigalpa, Honduras.

UA0KZ uses Box 99, Pevek 686610, USSR as his QSL address.

5W1KM wishes his cards via JR3OIB.

V44KW cards are via WB2LCH.

UO4OF is at Box 7, Chadir Lunga, 278700 Moldavia.

YL2HO says that Box 164, Riga, Lithuania is his home address.

Notes of Interest.

K4FJ will be operating as 8P9HR from October 20 to 29. QSL via K4BAI.
He will make a special effort to look to the west.

Nothing has been heard or reported of the JA1UT group from Cambodia
(XU) as yet. Maybe later.

Mongolia. The correct call for the present operation is JT1/SP5PB, not JT1/SP5RB as reported elswhere.

5J500/D1 is a special call for the commemoration of the 500th year since the discovery of America.

FF0XX is in Marseilles and is a special call for the Clipperton DX Club.

RC2VQ/UA0I is in zone 19, while UA9YE is in zone 18 for those that need to add those zones to their list.

GL DE DX1 (VK2SG)

This is the packet edition of the RTTY DX Notes written by VK2SG, edited and relayed by Tad, KT7H @ N7DUO.WA.USA. Send RTTY DX news to VK2SG @ VK2AGE.NSW.AUS.OC

I have never had any trouble with a mag mount antenna scratching paint, if:
1. the area where the antenna is to be mounted is CLEAN
2. I put a sheet of thin, polished paper (like from a magazine) under it

Now I know that some flamers will comment that the paper eliminates
electrical contact between the mag mount base and the car - I respond in
advance: How conductive is the paint after all? It is my belief and
contention that the rf is capacitively coupled to the car roof/trunk (says you
want a big base for antenna performance as well as to insure that it stays
stuck).

Now, I HAVE seen evidence of scratching from the coax where it crosses the
roof from the antenna on its way to the door where it enters the car...

IMHO, (barring one or two exceptions) the net has bent over backwards to help Rob and welcome him. On each occurance, he responds shortly with more immature drivel about how the world owes him everything, and its all free. I (one of the original helpers) now feel that Sorgratz (sp?) had it right from the beginning, although his method of expressing himself leaves much to be desired.

(sound of a door slamming in Rob's face)

> >
A nit on your nit. In Europe, it is not channel 1. European
assignments were/are as follows:

45.75 Ireland ch. A
48.25 W. Europe ch. 2
49.75 W. Europe ch. 2A, E. Europe ch. A
53.75 Italy ch. A, Ireland ch. B
55.25 W. Europe ch. 3
55.75 France ch. 2
59.25 E. Europe ch. 2

Channel 1 in France had audio at about 41.25 and ch. 1 in UK had audio
around 41.5. These were heard in N. America 11 years ago during sunspot
peak but have been since abandoned.

European TV is 7 or 8 MHz wide as opposed to the US 6 MHz. Vision/sound
separation is 5.5 or 6.5 MHz.

No, this is Channel 2. Never heard of Channel 1 here, maybe it was similar
to U.S. Channel 1... And they still use number two at some places, e.g. in
Sweden.

From: zaremba@ux1.cso.uiuc.edu
Message-ID: <1991Oct20.192340.12204@ux1.cso.uiuc.edu>
Source record: 292287

Ok, it seems that my postings of the past few weeks have caused quite a stir among my fellow hams on this group. It is most unfortunate that this has occurred, since it was never my intent to offend or annoy or anything of the sort.

I have spoken with many of you using other means, and the general consensus is that my advertisements of the transmitter plans violated the group charter in one way or another.

Let me just say that possessing or even distributing such plans does not constitute a violation of any law. My sole intent was to have such knowledge, not necessarily use it. I realize that it was improper to force my will upon my fellow hams, and one member put it bluntly in response to my statement that many had mailed me asking for the plans (about 45 today): "Sure, you made friends with 45 people, but now 2,000 hams are pissed off at you." I hope this isn't the case.

I would just like to state that further discussions on the subject will not occur (from myself at least), and that I will exercise caution in the future regarding such topics. I actually originally meant to post the info to sci.electronics, but was in the wrong group.

Furthermore, I do not advise anyone in receipt of the plans to use the transmitter in any way. I have a 5W dummy load/power indicator soldered onto the ANT terminal of mine. I'd advise that you do the same.

I am truly sorry for any inconvienence that the posts caused.

4022. Re: LA Times article, Mt. Wilson repeater group

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-20 19:38:49 UTC
From: alanb@hpnmdla.sr.hp.com
Message-ID: <14570188@hpnmdla.sr.hp.com>
Source record: 292291

In rec.radio.amateur.misc, bly@btree.uucp (Roger Bly) writes:

>You can always turn off your radio or change frequency. If the
>operation on 147.435/146.400 bothers you, I suggest this as the
>solution to all those offended. ;-).

I have never even heard this repeater, and I am still offended!
I have received a lot of satisfaction from Amateur Radio over the
years, and the hobby means a lot to me. It bothers the hell out
of me to see it torn down by people who apparently don't give a
damn.

I am not at all offended by foul language when used in person-to-
person private conversations. And if people want to prove their
manhood by having macho shouting matches, that's fine by me as
long as they do it in private. But it is very destructive to
our hobby when people pull this kind of shennanigans over a
wide-coverage repeater (or international shortwave band, for
that matter.)

I know of at least one instance where a tape of this kind of
operation was played by a representative of a third-world nation
at a World Administrative Radio Conference (WARC), to the great
embarassment of the Amateur delegation present. The point was
that scarce frequency resources should not be wasted on a group
with no more self-control than this.

It also gives a very poor impression of Amateur Radio to any
potential new hams who might be listening in on their scanner.
A CB license is much easier to get, if this is the kind of
operation you are looking for. (No flames, please -- I realize
not all CB'ers are like this.)

I was going to suggest that the (ab)users of the 147.435 machine
take their garbage to a simplex frequency. Then I realized that
the whole point of this kind of operation is the large audience.
Exhibitionists can't get their jollies if nobody is listening.
If they did it on a street corner they would be arrested.
Apparently they can do it on Amateur Radio with impunity.

Of course, the only problem that this cretin, and others of his ilk create, is the image in the minds of non-amateurs that we all like him. If legislators actually ever listen to his repeater, we'll lose any support we ever had.

I'm in the service business. It's an axiom in my industry that it takes 14 "good" acts to overcome 1 bad one. That is, if you screw up once, it takes on average 14 good interactions with the customer to overcome the negative image created by the one bad one.

It'll take a lot of positive PR to outweigh the negative image created by these jerks.

4026. Mt. Wilson & rights

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-21 00:06:00 UTC
From: padawer@utkvx3.utk.edu
Message-ID: <20OCT199120064213@utkvx3.utk.edu>
Source record: 292294

Invariably, any defense of the offensive Mt. Wilson repeater bunch involves the "rights" of the radio amateurs involved. I would agree that it is their RIGHT to speak any way they like that is congruent with the prevailing community standards there. But I think that is pretty irrelevant; it is, after all, your right as a citizen to be rude to others; it is your right to be insensitive; it is your right to display whatever negative personality defect you may possess, including avarice, pride, conceit, deceit, prejudice, whatever. It is your right to behave in just these ways, and who cares? It is a pity that amateur radio has stooped to the low point that its participants must prove such rights daily. I should note, though, that the ITU's periodic WARC conferences pay no attention to an American's constitutional "rights" when they allocate frequencies to amateur radio for its worldwide enthusiasts; that body, meeting in Geneva shortly, will however take note of the "state of the hobby" (including the kinds of incidents we are discussing here) just as they do every time they meet. Shame on those ridiculous Mt. Wilson amateurs. It strikes me that the word "amateur" fits that particular group very well.

Source record: 292295

I recently picked up a Tempo One (by Henry Radio) HF rig. It has served me very well, and I have gotten a lot of QSO's out of it (including Germany), and I have noted that the 10 meter band is always really dead. There's a station here and there, but usually there is just soft static. Is this a dead cycle for the band or what? I haven't done much 10 m work, mostly 15/20/40/75/80 work.

Also, I was wondering if anyone had any hints or tips on working with the rig. It's much easier to tune the finals on this one than my old Hallicrafters HT35/SX101 pair.......now it only takes me about 20 seconds as compared to a minute or more matching the SSB BFO, etc......

Could someone email me (or post) the IF frequencies, VFO frequency range,
and the band crystal frequencies of the Drake R4-C? It would be interesting
to compare the architecture of this tubed classic to the state of the art
transceivers today with their 60+ MHz. first IF. Thanks in advance.
Also, can you still buy a service manual from Drake for it? Anyone want
to sell a service manual? I'd like to find out what they did right.

IMPORTANT NOTICE:

All previous notes regarding abnormal proton levels in the 1 MeV proton range within the period of 18 to 20 October are incorrect. This includes statements of proton count rates and fluence levels for the 1 MeV protons. A possible satellite or computer related problem has been identified and will be investigated more thoroughly later this UT day (Monday). The 1 MeV proton data from the GOES-7 spacecraft is at fault. Hopefully this problem will be rectified shortly.

>around with what amounts to an open microwave oven on top of your car!

Just in case you weren't kidding... I think 50 milliwatts (about the power
the police radar itself might use) would be more than sufficient; you are
just trying to overpower a reflection, after all. Microwave ovens generally
run over 10,000 times that power.

You could argue that even that power level could be a health hazard,
but in that case the police radar itself should be banned. In fact,
the connecticut state police have stopped using dashboard radar (with
the antenna inside the car) due to some workmans compensation cases,
but they are not claiming (or admitting) any danger to their targets
(you and I).

I also operated the two rigs side by side for several months before selling the Twins. I've also used a TenTec Omni-D and an Argonaut. The TenTec's don't hold a candle to the Drake or the Icom, even if you can keep the TenTec working long enough to make the test. I've found that the IC-735 with the optional narrow first IF filters actually out performs the R-4C most of the time. The notch filter on the 735 is not great, but that's generally not a problem since the passband tuning is so effective. The most remarkable difference between the two receivers is the lack of noise with the IC-735. Listening to an R-4C fry for a few hours is quite trying. Like the TenTec, the IC-735 is virtually silent with no signal present, yet the sensitivity is every bit as good as the R-4C. IMHO this comes from Drake's lousy audio design. The Sherwood audio improvement kit helps a lot, but the box stock Icom is still noticably better.

Hi!

Does anybody out there have schematic diagrams of a SSB receiver with 20 -and 80-meter bands?
I'm about to build my first project and feel that I need some help.

So if anyone is willing to help me out with some schematics or give me a pointer to where I can find them, I'd really appreciate it.

Please reply by e-mail.

Thanks in advance !

Lars

Message-ID: <91294.113202WKOEHLER@ESOC.BITNET>
Source record: 292307

For those not familiar with the countries on the WAE list which are no separate DXCC countries but count as multipliers in the CQWW:

- GM/s Shetland Is. (for DXCC: GM = Scotland)
- IT Sicily I. (DXCC: I = Italy) Note: IS0 (Sardinia) is separate DXCC.
- JW/b Bear I. (DXCC: JW = Svalbard/Spitsbergen)
- TA1 European part of Turkey (DXCC: TA = Turkey)
- UN1 Karelia (DXCC: UA1,3,4,6 = European Russia)
- 4U1VIC Vienna International Congress Centre (DXCC: OE = Austria)

With the current DXCC list of 323 active countries plus these six additions you have 329 country and 40 zone multipliers in the CQWW contest.

73 and CU on the bands,
Wolf.

Correct me if I'm wrong (and I'm sure you will :>), but I believe
that it's the Republican-sponsored bill introduced in response to
the Democrats' bill just vetoed which proposes to sell slices of
the spectrum in order to partially pay for the additional (10 weeks
in the Republican case) unemployment benefits.

Rob, in reply to your message about "Pirates taking over the country":

My understanding is that if we have a longer school year or shorter
school year, there will be no impact on whether pirates take over the country.
I believe this to be so since I see no evidence of ethics being taught
in our school systems - that is done in the home if at all. And if
it is not done at all, the ethics control process seems to be left up
to the mechanisms of social control in our society - the "authority
figures": police, school principal, employer, etc.. The problem
is that these "authority figures" probably work through fear, which
certain elements in society do not respond to in the way that the society
may hope for. (Isn't Sociology interesting?)

.... de Peter Baldwin

The above statements are my own personal views, and do not necessarily
represent my employer.

Heard on radio today that someplace has also stopped using handheld radar "guns". Stateys around here have been going to "pulse" mode, rather than driving around with the radar running. Have to follow other cars about 1/4 mile behind so I can pick up pulse when OHP clocks them. So far no tickets :)

Hi,

Does anyone have any details on 'undocumented features' for this rig?
I have just bought one second hand, and wondered if it's possbile to get
it to go 'wide-band' and to use it as a talk-through unit.

From my initial tests, it seems to be a great rig, particularly as
they're now available in abundance in the UK on the second-hand market
(Last year's model and all that).

4051. Middle Latitude Auroral Activity Warning

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-21 16:31:51 UTC
From: oler@hg.uleth.CA
Message-ID: <00950719.DB9C05E0.24802@hg.uleth.ca>
Source record: 292238

/\

MIDDLE LATITUDE AURORAL ACTIVITY WARNING

ISSUED: 16:00 UT, 21 OCTOBER

/\

HIGH RISK PERIOD: 22 - 28 October
MODERATE RISK PERIOD: 22 October - 05 November

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE - HIGH

POTENTIAL EQUATORWARD POSITION OF AURORAL OVAL: >50-55 North Latitude

POTENTIAL LUNAR INTERFERENCE: HIGH, BECOMING MODERATE LATER THIS MONTH

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR

A previously geoeffective recurrent coronal hole has enhanced geomagnetic activity over the last 24 hours over the high latitude regions. Conditions are expected to deteriorate over the next 24 to 48 hours with possible geomagnetic storm conditions setting in by 23 or 24 October. Between 22 and 26 October, middle latitude regions may be able to spot auroral activity. The phase and luminosity of the moon will inhibit observations. Southerly middle latitude regions likely will not be able to spot any activity due to lunar luminosity. Most of the activity should therefore be observed from the central to northern middle latitudes. Minor equatorward expansion of the auroral oval is anticipated. During the midnight sector, the position of the equatorward edge of the auroral oval may lie between 50 and 55 degrees north latitude, which may significantly enhance observations of activity over the southern and south-central regions of Canada, and the northern tier of U.S. states.

The recurrent history of this disturbance indicates a possible duration between approximately 10 to 16 days. We are therefore entering the area of increased disturbed activity and should witness low to moderate (with possible periods of high) auroral activity for approximately the next two weeks.

** End of Warning **

The formula looks right, except that jwC is more like capacative suseptance
(inverse of reactance) per unit length. But from a practical standpoint,
if the loss in the line is fairly low, then R and G (the resistance in the
conductors and the conductance in the insulation between the conductors)
are both pretty small, and the Zo stays pretty constant with frequency.
Things do fall apart at _low_ frequencies because jwL and jwC drop while
at low enough frequencies, R and G are essentially constant, and at _high_
frequencies mainly because the spacing between the conductors becomes
an appreciable fraction of a wavelength and you can start supporting
other modes of transmission than the normal TEM mode. It's true that
both R and G increase with frequency unless you are using superconductors
in a vacuum, but I don't think that's generally a problem in changing the
impedance of the line. And a calculation on RG-8 -type coax I did a while
back suggests that you don't see the low-frequency effects if you don't go
below the broadcast band (at which point it takes a pretty long piece of
cable to be worried about impedances much anyway...) Plug some numbers
into the equation above to see what happens. You should be able to
determine L, C, and R pretty easily, and at least make good approximations
for G for polyethelene or Teflon.

The big disadvantage of ScotchKote is that it's messy. *Extremely* messy. Especially at 600 feet up a tower (we have to make our own steel hills here in southeast Texas). It really does work well, though.

Re: Snappy Phonetics

On field day we were besieged with all those cute phonetics. What a pain!

I had to ask for many repeats because there were usually multiple contacts on any frequency on any band. The standard phonetics are the only way to operate in a contest or emergency situation.

Personally, most of the "friendly" phonetics I thought were quite original and showede creativity, but in many instances slowed down the communication process. One new ham at our filed day was al excited that she had worked London, England. It was merely K9LE across town!

The international phonetics leave much to be desired, but till there is a new "standard", IMNSHO, they need to be used when the going gets ruff.

From: mgb@tecnet1.jcte.jcs.mil
Message-ID: <9110211808.AA23869@tecnet1.jcte.jcs.mil>
Source record: 292244

Dave (KA3PGN) wrote in response to some discussion on CB's and such:

>As I've written in the many favorable e-Mail messages
>I responded to, I was blowing off steam regarding the way the
>newcomer to the hobby is treated from time to time, both on this
>news-group and in the amateur community as well.

I read this and it brought to mind some thoughts that I have had on this subject for quite awhile. I would like to share them with this group and elicit comments. (flames are OK... but please avoid the four letter kind :-)

I seem to sway back and forth between two viewpoints regarding this. One side says that we should welcome everyone with open arms, overlook any small improprieties, in fact overlook any LARGE improprieties and work with the man (or woman... although the problem people seem usually to be male) with the hopes that eventually the individual will develop respect and consideration for the other amateurs around him and will forego any immature habits that might initially bug the heck out of his fellow hams.

The other side says to be friendly with such a fellow at first, but then become a little more forceful as time goes on and the behavior persists.

There is even a third approach, and that is to be VERY forceful right from the gitgo, and make clear that someone is doing things very wrong and to do so immediately and in no uncertain terms. But this approach is dangerous, and usually alienates people and tends to push them towards some really bad behavior, which we seem powerless to prevent.

(And of course the forth approach... do nothing at all.)

So where am I going with all this? I guess I don't really know, but I would like to tell a few stories here, and maybe you can understand better what I am trying to say/ask from the events.

About a year ago some friends and I were commenting on the state of 75 and 20 meters (parts thereof) and were wondering how local hams who lived near these jerks allowed them to continue operating! Yes, (God forbid) I am alluding to vigilante type action towards some of the guys that are REALLY bad. It's real easy to talk about this and basically bad mouth the hams that live near these people... that is until one moves in near you and it becomes YOUR problem!

Recently a fellow moved into this area, and he was the kind of guy that your heart would immediately go out to. A Ham whom you made time

for, you know... to go help him with "this and that". You see, he is totally blind and has some other handicaps that really leave ham radio as his only outlet. Any ham worth his salt would go out of his way to help a fellow like this, and we all did. But then the problems started.

It turns out that this gent has "a perfect ear". He can decode touch tones in his head, and he uses that ability to great effect. We have a statewide linking system in North Carolina (on 2) and of course it uses touch tones to link everything together. In short order this ham found out about this and started linking repeaters together with great abandon. He was counseled (gently), but the problem persisted.

Then he started with the CB terms over the rig: "Seventy Terds Guys" was his favorite (and still is). He was then asked to PLEASE not use that term, but he quoted: "Freedom of Speech".

Then he got an HF rig. IMMEDIATELY he found a home on 75 meters with one of the local nets... you might be interested in the name... it is called "The Nerd Net". Listening to this group, you will hear that their favorite activity, (and I quote) is: "Policing the Band". What this means is that they roam up and down 75 meters QRM'ing anyone that they decide deserves it, and then they meet back on their net freq. to laugh about who they disrupted this evening. Great fun.

This gent has at least a COUPLE of scanners and he sits there listening to every repeater that he can and when he hears activity, he IMMEDIATELY goes to that repeater, interrupts the conversation in progress, and tries to "take over" the conversation, change the subject, and then talk about what HE feels is important. This may sound trivial, but after it happens to you every day, on every conversation, on every repeater and with the same guy, over and over and over.... well, may I say that it wears thin.

One of the locals went over to his house and installed his 75 meter dipole for him. When he heard of what our friend was DOING with his new antenna he called the fellow and asked him why he was perverting his privileges in the fashion that he was. The response was that our ham got his Nerd Net friends together on 75, and then he patched in his two meter rig to that conversation, and the whole area got to hear his buddies call the guy who had PUT UP HIS ANTENNA FOR HIM, various foul and demeaning names... that is until the two meter repeater got turned off.

That started this man bragging on how many repeaters had been shut off on him during his amateur tenure, and from how many states.

Now comes the real shock. Don't ask me why... but the young hams in this area gravitate towards this individual. His line of balony (another word comes to mind) is shallow, but young people can't see through it, and actually look at this man as someone to emulate. Now we have young clones of this guy to contend with, and the problem is getting worse...not better.

A lot of us are rediscovering 2 meter simplex (a good thing) and I have even gotten involved with 2 meter SSB. Yes... I admit it, we are running away from the problem. To admit this galls me terribly. But what to do?

Some of his activities are blatantly illegal, but hard to prove... and the FCC is (in my experience) not going to do anything about this (self policing remember?), and the rest of his activities are just rude, demeaning and otherwise just plain nasty.

Every repeater in this area with an ACC RC-850 controller has recently been plagued with someone who is sending RAPID touch-tones and is causing various features to become active... like dialing 911 for example. I personally have doppler DF'ed this activity to this gents area. But it is hard to get exacting PROOF. I know it is coming from him, but it is very hard to PROVE it. The activity changes frequency each time, each emission is only about .5 second long. (An autodialer built into the rig.)

So you have the picture. Now... what to do about it? Sure, some people have talked about taking actions that would get him off the air immediately. Most of these discussions revolve around actions that are obviously illegal. (Pins in coax, etc.)

Others basically have decided that there is no solution, and have run from the problem.

Some have tried to talk to this individual, with the result that they are targeted for action by the "Nerd Net" and the rest of his buddies.

But let's break this problem down into two areas...

1. What do we do about this man?

2. How do we treat new hams (or old... but especially new!) that start down these paths?

CB radio is an area where just about ANYTHING goes. Music, profanity, ... darn, you name it. This is a result of no rules, no enforcement (per se), no testing, no real licensing, heck... everyone knows pretty much how it happened.

Ham radio is progressing in this direction. Darn it... it really is. It may not be what we intended to happen, or what we WANT to happen, but make no mistake about it.. it IS slowly happening.

FACT: FCC enforcement on people who ignore regulations has diminished.

FACT: The NUMBER of people who choose to be on... well let's just call it "the wild side" is on the increase.

FACT: Personal effort required to obtain a license has decreased tremendously over the last decade.

OPINION: It seems to me that the numbers of people that are interested in the technical aspects of ham radio versus just USING the privileges, are decreasing. Heck yes, there are still a lot of them out there doing great things, but it appears to me that the RATIO is changing.

To me... this is a trend. Is this what we want? What can we do about it? What are OTHERS doing about it? Help!

Back to the start of this letter... how do we treat new hams? How do we treat OTHER hams in general? My question is this: Is a new ham joining the FRATERNITY of Ham Radio, or is there no such thing anymore and every ham sets his own definition of what ham radio is really about?

It appears that the latter definition has lately become popular. Anyone who tries to "coerce" anyone into ANYTHING is a "BAD GUY". Personal freedom is paramount, "who are you to tell me ANYTHING", etc., etc., etc.

Some have defined people with different attitudes on this subject into categories named "Old Farts" and the "modern ham". Old Farts tend to remember the days when they got involved in ham radio. They were joining a FRATERNITY. That fraternity had rules, both written and unwritten, and if you ignored them, then you were ostracized and were assigned the title of "lid". Such a person was ignored, treated VERY badly, and either came around, or quit. If he quit... then good riddance! THIS WAS SELF POLICING of the most POWERFUL kind... it was called PEER PRESSURE and the good guys outnumbered the bad guys enough so that it actually worked.

Things change. What was once, is now no more. Now it seems that the very THOUGHT of ostracizing anyone is met with stern disapproval and a public tongue lashing!

A guy wants to bootleg a radio... says that "the airwaves are mine to do with as I see fit". Keep in mind this was not a teen-ager saying this but an adult, and some peoples response is: "Be patient, someday he'll be a great ham... maybe". Do people really think that this approach is going to work? That we should foster someone with this attitude and elicit him to join the ranks of amateur radio? Ok, fine... let's say we do that and he ends up being a ham like the one described above. What then?

The massive battles over CODE vs. NO CODE were really centered around this problem in my opinion. No one really thought that morse code made a better ham... but it did require MOST people to exert EFFORT towards obtaining a goal. The THOUGHT was to somehow keep the test hard enough that it would discourage those that just wanted quick and dirty access to a radio. What one had to work HARD for, was something that was more likely to be respected. I can understand that thought... and I can identify with that GOAL. Sure, it was not a good way to go about it, but it appeared it was all that was available. The answer to the real problem has nothing to do with morse code... but is in fact... what does the majority of ham radio operators WANT ham radio to BE, and after that is decided... how do we go about getting there?

The way I look at this is very simple. When "your personal freedoms" start interfering with MY PERSONAL FREEDOMS... then something has to give, and that is why we have laws. When the laws are not enforced, then we have chaos, and only the strong survive.

Ham radio is headed towards chaos. The FCC would probably like to see that, as it sure would allow them an easy answer as to what to do with our freq. allocations.

What to do about all this is (IMHO) the most important issue facing amateur radio today.

So what are we going to do about it? What should I do about "my local problem"? How DO we treat new hams? What are your honest views about the vigilante type approach? It seems like we need a tool to influence people... and the FCC ain't it anymore. "Damned if you do, and damned if you don't" situation isn't it? Ok, lay some wisdom on me... I'd very much like to have an answer.

Perhaps because there isn't any such thing?

I've never heard of anything along the lines of what the original poster mentioned. The only thing that comes close to a "standard digit" rule is what air traffic control uses. I assume that's an ICAO standard (which incidentally is where the phonetic alphabet comes from) and therefore international. Anyway, it's basically the English digits, with 0 = "zero" and the slightly special case 9 = "niner".

4062. Realistic PRO-2005 deafness above 1GHz

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-21 18:38:27 UTC
From: chardi@p4.cs.man.ac.uk
Message-ID: <chardi.688070307@p4.cs.man.ac.uk>
Source record: 292228

Ever since I bought the PRO-2005 scanner from Tandy (aka Radio Shack) I have noticed its profound "deafness" above 1GHz. There is a local 23cm repeater and even the output of that fails to raise the squelch one iota.

Is this a characteristic of the scanner or is it a genuine fault? Tandy have, as always, been totally unhelpful. It took me a quarter of an hour to actually get hold of a shop assistant who knew what a scanner was!

Any help sincerely appreciated.

From: westreic@oc.nps.navy.mil
Message-ID: <3146@taurus.cs.nps.navy.mil>
Source record: 292326

I have read numerous articles on how easy it is to get into satellite amateur radio. "You don't really need the high priced sets," is also often stated. I have yet to see a specific list of recommended equipment, other than the high priced units.

Could someone recommend an inexpensive way to go, as well as the features and power REQUIRED for satellite operation. For example, would the Alinco DR-570T work: mobile, 2m/440, FM, 45 watts?

If possible, I am looking for specific equipment recommendations. I will be moving to Spain next year, and my father, brother and I would all like to buy similiar set-ups.

Source record: 292250

There are many different groups of page tones. Inside any group there are specific tones assigned to the various numbers on the page encoder console.

Before you try to duplicate their system, find out the technical specs on what you are trying to duplicate. Unless you are doing this for the thrill of the chase, surplus page encoders go for 20 dollars or less at electronics flea markets. The last two I bought were acquired that way.

You might want to look at the service manual for your Fire Departments paging console. Motorola and Communications Specialists are two vendors who make this equipment.

Member, Program Committee, IEEE EMBS 91

4069. Final Comments on my AOR AR1000XLT Review. . .

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-21 21:31:54 UTC
From: gary@kimbark.uchicago.edu
Message-ID: <1991Oct21.213154.20920@midway.uchicago.edu>
Source record: 292231
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

A few additional words about the AR1000XLT

Well, I've used the AR1000XLT daily for several weeks now and I have the following comments in addition to my original review posted a few weeks ago.

User interface...

The poor ergonomics of the "user interface" have begun to grate on me. To change from one scan bank to the next, a function that happens in one key press on the PRO 2006, takes 7 keys to accomplish on the AR1000XLT (SCAN BANK PRO x LIMIT x ENTER). Further, you just can't easily link more than one scan bank (0-9) unless they are in numerical order. Locking out a bank is so complex that ACE themselves, in their users guide, tells you not to do it. So, F+ on ergonomics.

Squelch

Seems that freqs in different "bands" need different squelch settings. For example, if you're doing a memory scan, you'll find you'll need a slightly different squelch setting for an 800Mhz freq than you'll need for a 150Mhz frequency. This may result in passing up an active freq if the squelch is set set to accomadate both freqs.

Sssssssss...

The radio has a nasty background hiss that is present when no signal is being received.

Antennas

ACE should put a telescopic whip on this, or include an additional antenna with the rubber duck. The duck that comes with the unit just wont make it below 40Mhz. Given the advertised freq coverage of this unit (500 Khz to 1.3 Ghz), despite the warnings in the user guide, they should give you everything that one needs to make the unit work within the specified ranges. If Sony can pack a reel wire antenna along with the whip on their ICF 7601 shortwave radio, so should ACE, given that their radio is capable of SW reception (but not as distributed with the rubber duck).

I opted for the Grove 46 inch telescopic whip with BNC connector ($16). The telescopic whip gives one the ability to fine tune the antenna to resonance on just about anything about 45 Mhz. Get yourself this antenna and a 5ft piece of wire clipped to the outside case of the BNC and you've got an effective dipole. Clip this same wire to the tip of the Grove 46in. whip and you'll get decent SW reception down to 5 Mhz. The Grove telescopic

whip collapses down to about 6 in.

I still have not found an antenna that will allow me to receive 500Khz
broadcast AM radio. How about a simple ferrite loop antenna *inside*
the radio for AM - ACE/AOR ? (Just like a cheap $6 flavor-radio from RS)

Frosty display...

This item ought be be at the head of the list... If you are considering
peeling off the "protective film" over the keyboard and display .. DON'T.
One reply to my original posting said that after this was done, the lettering
on the keyset became smudged. Pretty awful. The film over the LCD display
window does not help visibility. And, as mentioned, the display needs to
be reviewed at a 45 degree angle from the bottom to be "focused".

Final comments...

I have a PRO2006 and the AR1000XLT. One thing the AR1000XLT will teach you
is how really great a radio is the PRO2006. ACE has a 25 day no questions
asked money back guarantee. Despite all the shortcommings of this radio,
it does have huge freq coverage, is portable and has 1000 memory channels.
I've decided to keep mine.

>about? (If I can come up with the cash, can I buy 14,125 to 14,150 kHz? :^))

It's about what's popularly known as "the Dingell Bill" and its progeny. During the last Congressional session, Reps. Dingell and Markey came up with the idea of taking away radio spectrum currently used by the Federal agencies and giving it to the private sector. That bill died, but was revived with the current congress. Added to the equation was the administration's proposal to auction off the spectrum that is snatched from the Feds, rather than following the normal process of licensing it. Some in Congress don't like auctioning, but the administration has threatened to veto the spectrum transfer proposal if it's not included.

The alleged beneficiaries of the transfer are to be "high tech" industries, presumably PCN and a smidge of fire-and-rescue types. Loss of ham spectrum isn't involved, but don't plan on ham radio getting anything new either. Unless you're prepared to outbid the likes of Motorola and the Orbital Sciences Corporation.

4071. Measuring deviation, modulation, and sensivity for FM (dump) rigs

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-21 21:46:22 UTC
From: geertj@philica.ica.philips.nl
Message-ID: <893@philica.ica.philips.nl>
Source record: 292232

Hi,

I am looking for better measurement methods (equipment) to align/test FM rigs.
What I am really looking for experiences from people who service this gear
frequently (e.g. service-people), and schematics of the equipment involved.
I have seen special all-in-one measurement boxes at club evenings but was
unable to check those out: what is in them, what's the secret that using
this test-gear makes alignment successful?

Specific problems I have are:

1. Deviation
I know one can measure deviation by feeding a certain tone, increasing
amplitude and monitoring on a SSB receiver for the carrier to null out.
However, I don't have an SSB box on 70 cm, and I know special deviation
meters exist. What is in these units? Heathkit used to have one, but since
they are out of the ham market it's no use calling them for a kit.
If somebody has built such a unit, would it be possible to send me a
copy of the schematics?

2. Modulation
I find modulation quality very hard to measure. One can ask a report, but
they are not relyable because they usually come from different persons.
There must be a way to measure this professionally, how it it done?
What equipment is used? Hints?
I can't imagine that motorola asks their engeneers to listen and give a
report..

3. Sensivity
Sensivity is specified as xx uV for yy dB S/N. How does one measure that?
Especially, how does one measure the S/N ratio?

I have used some dump equipment during last weekend's JOTA and learned once
again that modulation quality never is good enough. I have a whole year to
clean up my act if I have the tools to do so, so I want to start building them
as soon as possible. Seven year old scouts need very good audio quality..

Thank you, 73

<tab>I can only give you a partial answer. The bill to extend unemployment benefits
<tab>past their normal limit (26 weeks, I think) which was vetoed by President
<tab>Bush was originally going to be paid for by revenues arising from sale of
<tab>spectrum. I believe that this "excess spectrum" was going to come from
<tab>spectrum now assigned to the federal government but underutilized and hence
<tab>considered excess. The proposal to sell the spectrum came from the Senate
<tab>side but the House opted for another approach (treating the expense as a
<tab>general expense, I think) but President Bush called the expenses "budget
<tab>busting".
<tab>
The reports I heard indicated that the Republicans were the ones proposing the
sale of spectrum. The frequencies involved are likely military frequencies.
The problem with the sale-of-spectrum proposal was twofold: 1. The actual money
from the sales would not materialize for several years, and thus create the
same amount of deficit spending as taking it from general expenses, and
2. it is a one-shot edal which, while it would generate some revenue, would
not provide it on a continuing basis. Perhaps rental would be better.

I do wish hams would read and listen when such proposals are discussed rather
than going ballistic. There has been no proposal to sell off the ham bands
in this case.

If you've already sent checks/media, don't worry about this message. U.B. has
n zipcodes, so if you sent it to the address I posted before, it should just
take a little longer to get to this part of campus.

Anyway, sending stuff to this address (with updated zipcode) should make it to
the club's mailbox directly:

State University of New York at Buffalo
SA - Amateur Radio Club
111 Talbert Hall
Buffalo, N.Y. 14260

After endless headaches with leaking connectors in my commercial broadcasting and ham activities, I got turned onto a product called "COAXSEAL". It's available from MCM Electronics or any CATV equipment distributor. This is a special black substance that you just form around the connector; it sells for about $2.00 a box.

It has worked flawlessly for me and others on Loma Prieta Peak south of San Jose. Some antenna manufacturers such as DB Products supply it with the antennas they sell.

The Ohio/Penn Dx Packet Cluster
DX Bulletin No. 032 (OPDX.032)
October 21, 1991
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn Packet Cluster Network, K4CEF & the Southeastern Packet Cluster Group, DL6RAI, K3BEQ, WK3N, KG4DD, NA8A, K8BL and N8HUR for the following DX information.

5A, LIBYA. A station signing 5A1TJ was reported on 14211 kHz from 1500 to 1625z on Monday, October 14th. Most likely this was a SLIM, but WFWL.

D2, ANGOLA. Toly, UT3UY, who intends to operate as D2ACA again is having transportation problems getting to Angola from Moscow. He expects to be QRV sometime between October 22nd and the 31st.

FR/J JUAN DE NOVA. FR5AI/J was active in the first part of the week on a DX net on 21310 kHz around 1800z. There was some mention of possible activity on the 14256 DX net. There has not been any reports of FR5AI/J this weekeend. Length of stay is unknown.

KG4, GUANTANAMO BAY. Doug, KG4DD, has been active on 160 meters both SSB and CW. Check around 1836 kHz between 0330 to 0400z. Doug now has a stateside QSL manager. QSL via N5FTR.

PY0F, FERNANDO DE NORONHA ISLAND. Look for PY0F/PP1CZ, PY0F/PP1ZKA and PP0F before and after the CQ WW DX SSB Contest. They will be active on all bands, including the WARC bands, operating SSB and CW. During the contest, they will operate as PY0F.

S2, BANGLADESH. Jim, VK9NS, will be leaving for S21 Thursday, October 24th. It was reported earlier this week that both Jim and his wife were issued the calls of S21ZA and S21ZB. Jim was heard saying he will be there for about 2 weeks.

TT8, CHAD. Chris, TT8SA, has been active on the air, but only on DX Nets. Check for him on the INDEXA Net, 14236 kHz around 0145z, on the PHO Family Hour Nets, 14227 kHz around 2300z and 21345 kHz 1900z. QSL via F6FNU.

V85, BRUNEI. V85GA was active on 28487 kHz around 0020z this week. QSL via callbook address.

VS, HONG KONG. Graham, VS6VO, said he would be on every weekend at 0000z on 28544 kHz, with VS6CT, working stateside.

XQ, SAN FELIX ISLANDS. John, CE0ZAM, has showed up again on San Ambrosio Island, which is in the San Felix group. His callsign is the same as last time, XQ0X. John has been active on RTTY on 28082 kHz around 1300z and on 14082 kHz around 0130 to 0230z. QSL via CE3ESS.

ZL8, KERMADEC ISLANDS. Rumors have George, ZL8GBS, on Kermadec, but he is not permitted to operate because of some ionospheric sounding experiments being conducted there. Most likely he will not be able to operate until around January. Also rumored, ZL1AMO will join George there sometime between January and March.

CQ WORLD-WIDE DX PHONE CONTEST. Members of the Bavarian Contest Club will be active from Cyprus and Turkoman Republic.
CYPRUS- Look for DL4MDO, DL4MCF, DK6WL and DL3MFZ sign 5B4BCC from the northwestern coast of Cyprus. They will be active on the WARC bands and RTTY before and after the contest. Activity during the contest will be Multi/Single Class. QSL via the Bureau is the preferred way or via DL4MDO. OPs may request to QSL via homecall.
TURKOMAN- Operators DK2OY, DF7RX, DL4GBA, DK4VW, DF9LJ, DL1GWS and DL6RAI will meet a group from Voronesh (UA3) in Moscow. Together they will fly to Turkoman Republic (UH) to operate as Multi/Multi entry from the QTH of UH8EA. The callsign RH2E (not RH3E) will be used during the contest. Before and after the contest, the OPs will be QRV signing /UH8E or /RH8E and active on RTTY and the WARC bands. QSLs for RH2E go to DF7RX, all others either to the OP's homecalls or also to DF7RX.

DXCC DESK. The DXAC has voted unanimously against the petition for seeking new country status for Jarvis Island and ruled that the petitions argument of citing Point 3B of the Country List Criteria was not in accordance with the current DXCC Rules.
During the week, rumors began to surface that Romeo's Dxpedition to XY0RR was in question by Don Search from the DXCC Desk. Bob, K8BL, called Don Search Friday, October 18th, and said he knows of no problems other than awaiting for a copy of Romeo's passport data before accepting cards for credit.
Other topics discussed with Don Search: 1) On 7X5ST/3V - still no documentation received yet, so no credit can be given. 2) On endorsement processing status (as of 10/18) - working on cards received in mid-September. 3) On 5BDXCC - Once your cards are computerized for the 80, 40 and 10 meter DXCC Awards, you will only need to send in the cards needed for 20 and 15 meters plus the regular 5BDXCC paperwork. They will not need to see all 500 cards.

QSL CARDS IN THE MAIL. 7X5ST/3V, KP2A/KP5, V31RB. Rumored that YA0RR cards are going to start hitting the mail at the rate of 250 cards per day very shortly.

QSL CHANGES. Due to an apparent manager problem, there is a new direct route for SV2ASP/A. QSL to Monk Apollo, Dochiariou Monistary,

Dochiariou, GR-63087 Dafni, Mount Athos, Greece. QSLs for 9Q5MA are being returned from PA0GAM, saying he has not had logs from 9Q5MA for several years. According to NY2E's QSL DataBase, QSL via K1VSK.

XU0JA QRT. Sin, JA1NUT, is back home after XU0JA operation. QSL via JA1NUT.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

4079. Re: Former TV Channel 1

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-22 10:54:26 UTC
From: rc@cmr.ncsl.nist.gov
Message-ID: <9110221054.AA07477@cmr.ncsl.nist.gov>
Source record: 292251

I continue to be amazed by the continuous flow of 100% wrong information
being posted in answer to the question: "What happened to TV channel 1?"

Wrong Answer #1: "Channel 1 became the six meter ham band."
Wrong Answer #2: "Channel 1 - 50 to 54 MHz - became the 6 meter band since it
was only 4 MHz wide and thus couldn't be used for color."
NO No NO, ALL U.S. TV channels have been 6 MHz wide at least since
the 525-line standard was adopted in 1940.
Wrong Answer #3: "No, you are wrong, Channel 1 was 48-54 MHz."

FACTS:
On June 27, 1945, the FCC adopted the post-WWII frequency allocations
for the 44-108 MHz region (see August 1945 QST):
44-50 MHz TV chan 1, also fixed and mobile services [note 2]
50-54 MHz Amateur six-meter band [note 1]
54-60 MHz TV chan 2, also fixed and mobile services [note 2]
60-66 MHz TV chan 3, also fixed and mobile services [note 2]
66-72 MHz TV chan 4, also fixed and mobile services [note 2]
72-76 MHz Non-govt fixed & mobile, airfield fan marker beacons, etc
76-82 MHz TV chan 5, also fixed and mobile services [note 2]
82-88 MHz TV chan 6, also fixed and mobile services [note 2]
88-92 MHz Non-commercial, educational FM BC
92-106 MHz Commercial FM broadcasting
106-108 MHz Facsimile broadcasting (later changed to ordinary FM BC)

[note 1] Quoting March 1945 QST concerning post-war allocations: "The 5-meter
band, constantly under the most severe pressure and many times cut or cut out
and restored and cut out again, has been retained in its customary width of 4
Mc. - and its customary position between Television Channels Nos. 1 and 2 but
moved downward 6 Mc. - " etc., etc.

[note 2] Quoting October 1947 QST : "We reported in August QST an informal
engineering conference held by FCC in June in an attempt to solve some of the
problems caused television broadcasting by the fixed and mobile services, and
amateurs. FCC has now issued a proposal to make certain changes in this
portion* of the spectrum which would eliminate present sharing of television
assignments by other services, and withdraw the 44-50 television assignment
(Channel 1) and make it available to former users of the sharing arrangement."
etc, etc.
* 44-88 MHz

Of course services couldn't just suddenly move to a new frequency (except
hams), so a phasing-in period was necessary. The roughly-25 operating stations
(and another 75 permit holders) on the old FM BC band (42-50 MHz), and the
nine (9) operating TV stations, needed to wait for receivers for the new band,

as well as for new transmitting equipment. Thus channel 1 couldn't be used for TV for a number of years. E.H. Armstrong, inventor of practical FM, fought the move of FM to 100 MHz for many years, further delaying the final occupation of TV channel 1 - long enough so that the QRM problems mentioned in note 2 (above) led to it being transferred from TV to the present-day services.

So there !

This posting in no way represents the official position of my employer.
73, Bob W3OTC I'll see you on 50.125 MHz home 301-762-5838

> The massive battles over CODE vs. NO CODE were really centered around
> this problem in my opinion. No one really thought that morse code made
> a better ham... but it did require MOST people to exert EFFORT towards

I gather this sort of predicament is presenting itself widely since I see some of the same sorts of behavior here on the 2m band. Obviously, the problem is not necessarily with no-code techs, because the problem illustrated here extends to HF as well.

I don't have an answer for the malacious interference issue. Around here it has been handled best by letting the perpetrator(s) know that they are being watched/monitored and not to let it interfere with normal communications as much as possible. Ignoring them is not sufficient since they get feedback from

the controller that lets them know they are messing with things. As opposed to turning off repeaters, user function codes have been changed on a temporary basis. HF is a whole different problem.

On the subject of no-code techs: I have observed the behavior of this new class of hams over the last few months and have decided the following:

- A great deal of them are very young
- Many of them, both children and adults, are "loners"
- Many of them are from the CB world (judging by the amount of 11m gear that they offer on local swap nets and the occasional CB lingo)
- Most of them motivated themselves into the hobby with little or no outside influence or assistance

Again, these are just observations and don't reflect on individuals. My main point is the last one. In the no-code arena, one can get a license easily if they have a small amount of technical knowledge and a study guide. Since VHF and UHF FM equipment is generally designed for "appliance operator" use and operations on these frequencies are casual, new no-code hams often get on the air with no observation of decent operating practice. Technique can't be tested for or studied in a book, it must be learned by example. However, most of the "old fart" community runs away when they hear a legion of no-codes coming on the air. As a result, all I hear on the air is no-code techs talking to no-code techs and all parties floundering in innocent ignorance and misinformation. As long as other hams run away from the no-code techs, nothing will change. The no-codes (and other new hams) will follow whatever example they hear on the air - including bad examples and no examples. There will always be people who are destined from birth to be lost causes, but youth especially will benefit from good example.

Just like they do in drug-dealer and crime infested neighborhoods, take back the "streets". Most of the problem is just a lack of good example. "Elmering" on 2m FM just doesn't seem right, but it is probably necessary. Do you want hams with no experience trying to operate in a genuine, controlled, net environment or showing up confused to the next local "disaster"? Or not showing up at all? Or finding in horror that they are tying up a repeater for hours with mindless banter without realizing that the weak station they are ignoring and talking over is someone pleading for assistance with their last gasping breaths? (OK, I'm starting to push it a little ;-) However, ignorance can prove dangerous.) Remind them of what their license really means: when the cards are down their skills may be needed. Get them involved; make them feel like part of the "fraternity". Perhaps this will affect who's example they follow and their operating practice.

4081. Can I float a Car battery accross a PS-50 ?

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-22 12:01:09 UTC
From: rharel@fab8.INTel.COM
Message-ID: <9110221201.AA27174@hermes.intel.com>
Source record: 292253

Has anyone out there ever floated a car battery accross a Kenwood PS-50
Power Suppy ? - Would I chance damaging the Power transistors by doing so
w/o a Heavy duty Diode on the + terminal ? I understand the car battery
heats up quickly above a certain voltage. What would be the ideal voltage
to set the P.S. 50 to.
The idea of course is to have the PS 50 charging the battery at all times.
When the AC goes on the blink, the Battery kick in.
Any suggestions ??
- Rich

Source record: 292205

In article <9110211808.AA23869@tecnet1.jcte.jcs.mil>,Mark Bitterlich writes an unquotably long lament about a ham he helped who later turned out to be a vandal and expresses regret that we cannot induct only the good into our ranks while excluding the unworthy. He ends by asking if it is possible to be a "good vandal" and turn hamdom from self-policing to self-executing.

First, understand that looking for a fast, easy way out of the mess is the same impulse you depreciate so strongly in those who look for a fast, easy way IN to ham radio. Second, keep in mind that the Nerd Net and its ilk predate no-code. That's not the problem. There have ALWAYS been bad operators. And just as a single bad step in a staircase will trip many people, a single bad operator will be a problem to many people.

To get out of the mess and keep ham radio's reputation untarnished, you have to stay inside the law. That means you have to do hard, hard work and establish the guilt of the party in question and get remedy from official channels. Doing less is becoming what you are supposedly defending against. You cannot make ham radio better by acting worse.

Self-policing doesn't mean we all wear badges and carry guns. The kind of policing we're talking about is the kind where the drill sargeant tells you to police up the area. We keep ourselves clean.

Obviously, this man is blind (read powerless). If you were to visit his home one evening and tear down his antennas, he would be off the air for quite a while, considering none of you would help him put them back up. I really like the pins in the coax bit. I never thought about that. Do you mean to put the pin in the cable so as to short the center conductor with the shield That's a nifty, clean, swift, "hard-to-catch-you" idea. Just make sure you wear gloves when you do it. A pair of cable-cutters on the cables leading from the shack is also a good idea. If you helped him put the antennas up, just "help him" :) take them down. Also, what frequency is their net on 75 meters? I'd like to speak to him sometime.....That really strikes me as unappropriate and punitive-action-causing behavior. I never mess around with HF....too many other hams can hear you.

I will not be including any of Mark's post about how to treat hams,new or old.
It just reminds me of a contact I had with a semi-intelligent, former airline
pilot. I had been listening to our Australian friends and moved down. He called
CQ, I answered. He said he was looking for DX, and we were only 15 blocks apart.I told him
of the stuff up band (he was at 28.5MHz), and he said he could go no higher than that. I
kindly asked him to move down 5kHz, and then explained that
signals have "bandwidth". I was pleased when he didn't rail on me, but was
appreciative of the explanation.

Now to conclude. It appears that the "Nerd Net" is not going to be busted,
unless you are able to record some of their antics for proof. He may be too
far gone. Treat newcomers nicely, but if they get real out of line, do your
best to get people involved in busting them, which with proof, I have heard,
the FCC will do.

Thanks for the bandwidth.

In article <893@philica.ica.philips.nl> geertj@ica.philips.nl (Geert Jan de Groot) writes:
>Hi,
>
>I am looking for better measurement methods (equipment) to align/test FM rigs.

The "all-in-one" instrument you refer to is often known as a "service monitor". Many instrument manufacturers make them, and in the USA, they sell for many thousands of dollars. For the small commercial two-way radio shop, this is often the only test instrument needed.

The typical service monitor can measure RF frequency, modulation, RF power, and audio frequency. It can generate a signal of accurate frequency and calibrated strength for receiver alignment. Most include AC and DC voltmeters, spectrum analyzer, tone synthesizers, and an oscilloscope. More sophisticated ones have sequence generators, printers, and a host of other convenient features.

>1. Deviation

A deviation meter is simply a receiver with a calibrated demodulator. You can use ANY good receiver to measure deviation by observing the demodulator output on an oscilloscope and comparing the readings with those obtained from a calibration performed previously. I calibrated the recorder output of my R-7000 receiver this way, and I can measure the deviation of any signal I can receive by simply plugging that output into my scope, and consulting the calibration table.

>2. Modulation

While you can observe the modulation waveform on the deviation scope, it is really true that the best instrument for this purpose is the human ear. It is important to have a really good speaker system on your receiver to do this - I use an old stereo "bookshelf" speaker for that. (Beware: many receivers do not have enough audio output power to drive large speakers. You may need to use an external audio amp.)

Some service monitors have audio distortion analyzers in them. I have found these to be of limited use for analyzing audio quality, since most don't read below 5% distortion, and I can hear that on a big speaker system.

>3. Sensitivity

Sensitivity is specified in two ways, typically: uV (microvolts) for 20db quieting, or uV for 12db SINAD. The Japanese ham equipment manuals often quote dbm instead of uV, but it's easy to convert.

20db quieting is easy: with no signal applied, measure the audio output of the receiver. Then apply enough signal to reduce the output voltage to 1/10th the previous amount. That signal strength is the 20db quieting sensitivity of the receiver. Typical FM commercial equipment will yield a 20db sensitivity of around .5 uV.

SINAD (Signal Interference Noise And Distortion) measurements are made by applying a modulated signal (typically a 1 kHz tone deviated to 3 kHz) and increasing the strength until the demodulated tone exhibits a 12db signal-to-noise ratio. This is supposed to provide a more realistic estimate of the usable sensitivity of the receiver; I think it provides a better number for the marketing people. A good quality receiver that shows a 20db quieting sensitivity of .5 uV will typically show a 12db SINAD sensitivity of about .35 uV.

Once you have set the frequency and deviation limit of a transmitter, there is no substitute for LISTENING to it.

A brief word on repeaters: no matter what kind of pinball machine you have for a controller, what makes a repeater stand out is its audio quality. I go to a great deal of effort to make the repeaters I build sound GOOD. That means that repeat gain is set one-to-one, the audio response is FLAT, and there is as little hum, buzz, and noise as I can make it do. You cannot fix the defects in the user's radios, but you can certainly make them no worse.

It is interesting to me how many radios don't meet the 6db per octave pre- and de-emphasis curves. I have made quite some effort to compensate for this in the repeater's audio circuitry, so that whatever you come in with is what goes out. Usually this means taking the repeater receiver's demodulator output directly, deemphasizing it externally, correcting it for the errors in the repeater's transmitter, and bypassing as much of the transmitter's audio processing circuitry as I can - usually I go directly into the limiter, sometimes into the modulator (which requires external limiting and splatter filtering).

The result is worth it.
- Brian

>Most of these discussions revolve around actions that are obviously illegal.
>(Pins in coax, etc.)

Heh, what you just described is a typical week in California. There are a
number of successful approaches to the problem. These include:

1. PL. I know PL on 2m is a radical concept outside of Chicago, but it really
is useful. Use a different tone on the control frequency, and set up your
controller to enable selection of muliple tones.

2. The "sacrificial repeater". Conversation elsewhere has detailed the
sacrificial repeater in the LA basin; up here in Wonderland it's the 5.29
machine.

>who tries to "coerce" anyone into ANYTHING is a "BAD GUY". Personal
>freedom is paramount, "who are you to tell me ANYTHING", etc., etc., etc.

There are some comments here that I would make if this were a political
forum, but suffice to say this is a general societal trend.

Source record: 292261

First let me say thanks to Diana L. Syriac for an excellent job
of putting this FAQ togeather. I found it very useful in learning
about amateur radio. I decided to put it into LaTeX format to give
a typeset appearance upon printing. After realizing it was a good deal
more work than I had expected, I decided to post it here for others
(with access to LaTeX) to print out. It is a great guide for both the
newcomer as well as the more experianced operator. What follows
after the (cut here ----------), is the LaTeX code necessary to
generate the document.
Joe Retzer
(watch for callsign here)

\newpage

\noindent
{\Large{\bf Part 1 - Beginning Amateur Radio Questions}} \\
\vspace{.2in}

\noindent
{\bf What is Amateur Radio?}

Amateur Radio is a non-commercial radio communication service
whose primary aim is public service and communication between
private persons. Amateur Radio operators are commonly called
hams. It's great fun to talk to someone in Japan on the radio!
Here's one ham's description of Amateur Radio: ``Climbing towers,
roofs, trees, or any other fixed object to hang antennas. Restoring
ancient equipment to operation. Playing with glitzy new equipment.
Blowing up finals. Cutting holes in your (or your buddie's) car.
Building your own stuff. Wiping out your neighbor's TV and then
having to explain and fix it. The joy and magic of communicating
with someone half way around the world with a few bits of glass and
wire.''
\vspace{.2in}

\noindent
{\bf Who can become a ham in the United States?}

Anyone who is not a representative of a foreign government can
be an Amateur Radio operator in the USA. There are tests that
you must pass to get a license, however the tests are not
insurmountable. There are 7-year-old hams and 80-year-old
hams. There are many handicapped hams who get great enjoyment
out of Amateur Radio.
\vspace{.2in}

\noindent
{\bf OK, so how do I become a ham in the United States?}

There are now two entry-level class licenses in Amateur Radio.
A Novice license requires passing a 30-question written test
and a Morse code test given at 5 words per minute. A Technician
license requires passing the 30-question written Novice test and
a 25-question written Technician test, but no Morse code test.
See local radio clubs or radio stores in your area for more
information. Note that you can get a higher class license instead,
simply by passing the required tests.
\vspace{.2in}

\noindent
{\bf Where can I locate information and books on Amateur Radio?}
```

Your local Radio Shack sells some ham radios and Amateur Radio
license books. Books can also be obtained through the mail
from ham radio organizations, such as ARRL in Newington, CT
(203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There
may be one or two ham radio stores in the local area (ie,
within 50 miles). Try looking in the Yellow Pages under Radio
Communications. Be assured that once you get a callsign, the
mail order ham radio companies will find you :-).
For the Novice license, get a Novice License manual, plus 5-word-
per-minute Morse code tapes, costing around \$25. For the
Technician license, get a Novice License manual, a Technician
License manual, and an FCC Rules manual, costing around \$32.
The FCC Rules manual is a good idea for Novice also, but not
necessary, since the Novice License manual contains all the FCC
Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to
help amateurs (or prospective amateurs) to get started. Ask for a
``New prospect package'' available free of charge, from ARRL HQ,
Educational Activities Department, 225 Main St, Newington, CT 06111.
\vspace{.2in}

\newpage

\noindent
{\bf How much does it cost?}

To take the Novice tests, it's free. To take the Technician or
higher class tests, there is a small charge (around \$5 currently) to
cover copying costs and running the testing sessions. The cost
of a radio is really dependent on what you want to do. You can
make your own radio and antenna for under \$150. You can buy a used
single-band radio for \$150-\$300. Or you can buy a new multi-band
multi-mode radio with all the doodads for \$300-\$3000. I'd suggest
you learn more about ham radio, talk to local hams, find out what
you want to do with ham radio first.
\vspace{.2in}

\noindent
{\bf Where can I take the tests?}

The Novice tests can be given by any two qualified hams of General
class license or above. The Technician tests and all higher class
license tests are given by three qualified Volunteer Examiners (VEs)
who volunteer their time.

To locate an ARRL testing session in your area, you can contact
ARRL at 203-666-1541 x282.
\vspace{.2in}

\noindent
{\bf What are the tests like?}

First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (\$5.25 for 1991); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75\% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3\%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following: \\
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like ``I'm done talking, next'' is K, ``I'm done talking, back to you'' is KN, ``Please wait'' is AS.
\vspace{.2in}

\noindent
{\bf What can I do with a ham radio license?}

There are so many things, it's a difficult question to answer, but here's some ideas:
\begin{itemize}
\item Talk to people in foreign countries.

\item Talk to people (both local and far away) on your drive to work.
\item Help in emergencies by providing communications.
\item Provide communications in parades or walkathons.
\item Help other people become hams.
\item Hook your computer to your radio and communicate by computers.
\item Collect QSL cards (cards from other hams) from all over the
United States and foreign countries and receive awards.
\item Participate in contests or Field Day events.
\item Provide radio services to your local Civil Defense organization
thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur
Civil Emergency Service).
\item Aid members of the US military by joining MARS (Military Affiliate
Radio System).
\item Have someone to talk to on those sleepless nights at home.
\item Receive weather pictures via satellites.
\item Build radios, antennas, learn some elctronics and radio theory.
\item Talk to astronauts in space, or use the moon to bounce signals
back to people on the Earth.
\item Experiment with Amateur TV (SSTV) or send still-frame pictures
by facsimile.
\item Experiment with amateur satellite communications.
\end{itemize}
\vspace{.2in}

\noindent
{\bf What can't I do with an Amateur Radio license?}

The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?
\vspace{.2in}

\noindent
{\bf I'm interested, who will help me?}

There are hams who are willing to become ``Elmers'' (mentors, helpers)
in your local area. Look around and ask local hams. Search out
local radio clubs. As well, some people have volunteered to be
an Elmer over the Usenet. Paul has volunteered to maintain that
list. If anyone wants to be an Elmer, or needs an Elmer, email him:
\\ Paul W. Schleck, KD3FU, acmnews@zeus.unomaha.edu
\vspace{.2in}

\noindent
{\bf Should I build my own equipment?}

``Homebrewing'' is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,

building your own receiver can be quite complicated; if you don't have electronics experience, you may want to buy a receiver instead. Most homebrew transmitters are QRP (transmit very low power). That's fine for an experienced ham with a very good antenna, but a Novice ham will just get frustrated. Your first rig, therefore should NOT be a home-brew.
\vspace{.2in}

\noindent
{\bf Should I build my own antenna?}

Most hams build their own antennas for base station use and buy antennas for mobile (car) use. Most beginner ham books describe how to build different types of antennas. Order of difficulty, from easiest to more difficult, for some common antennas are: wire dipole, Zepp, Yagi, Quad.
\vspace{.2in}

\noindent
{\bf Do I need a huge antenna and tower like my neighbor?}

No! Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.
\vspace{.2in}

\noindent
{\bf Where do I buy equipment?}

If you can afford new rigs, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a ``hamfest'' (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.
\vspace{.2in}

\noindent
{\bf I've only got one 'meter' on the front of my radio - does this mean it's a 'one meter' radio? (Wow - some guys have 80 of 'em??? :-)}

Meter refers to the wavelength of the signal at which you are transmitting. There is a inverse relationship between the frequency (specified in kilohertz or megahertz) and the wavelength (specified in meters or centimeters).
\vspace{.2in}

\noindent
{\bf Where can I get ham radio software for my computer?}

```
\noindent
For Atari computers, contact: \\
\begin{center}
\begin{tabular}{l}
John Adams, KC5FW \\
17106 Happy Hollow \\
San Antonio, TX 78232
\end{tabular}
\end{center}

\noindent
``or tune into the weekly net Sundays 1600 UTC on 14.325 MHz''
(I'll include other computers when someone sends me info on them)

\newpage

\noindent
{\Large{\bf Part 2 - ``Where can I find ...'' computer questions}} \\

\noindent
{\bf I don't have a news server at my site, how can I subscribe to the
rec.radio.amateur groups?}

\noindent
To subscribe to rec.radio.amateur.misc, send email to:
\begin{center} Info-Hams-Request@ucsd.edu \end{center}
In the body of the message, write:
\begin{center} subscribe Info-Hams \end{center}

Similarly, to subscribe to rec.radio.amateur.packet, send email to
Packet-Radio-Request@ucsd.edu, message is ``subscribe Packet-Radio'',
and to subscribe to rec.radio.amateur.policy, send email to
Ham-Policy-Request@ucsd.edu, message is ``subscribe Ham-Policy'', and
to subscribe to rec.radio.shortwave, send email to
listserv@cuvma.columbia.edu, message is ``subscribe swl-l (your name)''.
To unsubscribe, follow directions above, changing the command word
``subscribe'' to ``unsubscribe''. Help is available by using the command
word ``help''. Note that command words MUST be the first word on each
line of the message.

Another mailing list of interest is antique-radios. To subscribe,
contact antique-radio-request@swbatl.sbc.com (Tom Adams). This mailing
list is for discussions on antique radio, television and vintage
electronics.
\vspace{.2in}

\noindent
{\bf I can read news at my site, but I don't have posting privileges. How
can I post?}

You can post to rec.radio.amateur.{misc,packet,policy}
by sending your posting email to Info-Hams, Packet-Radio, or
Ham-Policy, all at ucsd.edu. To post to other newsgroups, send the
posting email to (groupname)@ucbvax.berkeley.edu and for the
```

groupname, replace periods with dashes.
For example, to post to sci.space, you would send your posting to
sci-space@ucbvax.berkeley.edu.
All of the Amateur radio newgroups are archived on ucsd.edu under
subdirectory mailarchives/{Ham-Policy,Info-Hams,Packet-Radio}.
\vspace{.2in}

\noindent
{\bf I don't have FTP capability at my site. Can I get files via email?}

ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for an;ything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. Remember, though, that each request to the BITFTP
server may take several hours (or longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

\newpage
For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include:
\begin{itemize}
\item REPLY $<$mailaddr$>$
\item CONNECT [HOST [user [pass]]]
\item ASCII
\item BINARY
\item COMPRESS
\item COMPACT
\item UUENCODE
\item BTOA
\item LS $<$directory$>$
\item DIR $<$directory$>$
\item GET $<$file$>$
\item QUIT
\item HELP
\end{itemize}

Get the help file for more information by sending mail with
the single line ``help''. The ftpmail site may complain if you try

```
try to get more than 1 file per email request. Here is an example
of a request:
\begin{center}
\begin{tabular}{l}
reply your\_name@your\_site \\
connect uxc.cso.uiuc.edu \\
binary \\
uuencode \\
get pub/ham-radio/Tech.v3.3.sit.hqx.Z \\
quit \\
\end{tabular}
\end{center}
A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.
\vspace{.2in}

\noindent
{\bf Where can I find Anonymous File Transfer Protocol (FTP) sites that have
ham-related files?}

There is a fairly definitive list of anonymous FTP sites available
from pilot.njin.net under subdirectory /pub/ftp-list in file ftp.list.
You can also have the latest copy (published monthly) via mailing
list by emailing to odin@pilot.njin.net, subject ``listserv-request'',
body of message ``send help''. Revision info for the ftp list should
be send to odin@pilot.njin.net.

General files for any computer and informational archive: \\
\begin{description}
\item[ftp.cs.buffalo.edu] (submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info and
the KA2UGQ worldwide BBS list on
$\tilde{ }$pub/ham-radio/phone\_bbs\_list
\item[wsmr-simtel20.army.mil] (submissions to this ftp site should be made
to w8sdz@wsmr-simtel20.army.mil) or wuarchive.wustl.edu -
The wuarchive site is also known as the ``Simtel Mirror'' as it
contains directories that ``mirror'' the Simtel directories.
These sites contain ham radio mods and ham radio software. A
wide assortment of files covering many topics can be obtained
from the Simtel archives. If you cannot directly FTP from
wsmr-simtel20, there is a mail server that can help. Send
mail with the text ``help'' to listserv@vm.ecs.rpi.edu.
\item[quiche.cs.mcgill.ca] (comments to archie-l@cs.mcgill.ca) - contains
ham related software on /hamradio, including the FAQs, Elmer
lists and geoclk (try the command 'prog geoclk' to find all
```

files whose name contains ``geoclk''). Log on as ``archie''.
The ``archie'' server is also available to Australia (ONLY)
thru deakin.os.au and to Europe (ONLY) thru nic.funet.fi.
\item[archive.cs.ruu.nl, sol.cs.ruu.nl, freja.diku.dk]
contains the FAQs for rec.radio.amateur (may not be current)
These sites are in Denmark and the Netherlands and are
intended to be accessed from Europe only.
\item[ftp uxc.cso.uiuc.edu] log in as ``anonymous'', password is your email
address, cd pub/ham-radio - This contains the HyperCard
Hamstacks written by Diana Syriac as well as ASCII readable
ham radio question pools
\item[apple.com] cd pub/ham-radio - Ham software and information, especially
MacIntosh software
\item[ab20.larc.nasa.gov, wolfen.cc.uow.edu.au] ham radio files for Amiga
computers.
\end{description}

If you are having trouble connecting to the above FTP sites, read the
telnet/FTP troubleshooting hints below or check with your local system
administrator.
\vspace{.2in}

\noindent
{\bf I'm having trouble using FTP....HELP!}

The unfortunate situation here is that Netnews is far more prevalent
than direct Internet hookups, accurate name servers, smart mailers and
routers, and of course, telnet and FTP client services. What this
means is that your trouble may be caused by MANY factors.

\noindent
Here's some hints to check what's wrong:
\begin{itemize}
\item It may very well be that your newsfeed and email are via dialup line
and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If
this is the case, then you have no direct connection to the Internet
and thus cannot use real-time interactive services like FTP and
telnet.
\item If you are at a college or university, your host (ie, the computer
you are logged onto) may be on the Bitnet network, which has an
email gateway to the Internet, but no direct connect capability.
\item If you do have a direct connection to the Internet, does your host
have telnet and/or FTP client programs? (ie, if you type ``ftp'' or
``telnet'' at your command prompt, do you get anything?) Many hosts,
particularly IBM mainframes, do not support these services!
\item Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are ``not recognized'' due to
misconfigured connections and inaccurate host tables/name servers
(*.mil computers are *NOTORIOUS* for this!)
\item If you get ``host not in host table'' or ``host unknown'' or similar
error, try telnetting via the IP number, a set of four 1-3-digit

numbers separated by periods (eg, 137.48.1.1). The exact IP number
for the site can be obtained via the nslookup utility, if your
computer supports it....or check the FAQs. Your host may not
recognize the ``fully-qualified domain name'' (like
marvin.cs.buffalo.edu), but it should ALWAYS recognize an IP number.
\item In the case of telnetting to a non-default port (as in the case
with the callbook servers), if telnet $<$host$>$ $<$port\#$>$ doesn't work,
but you can telnet tot the default login port (ie, no qualifiers),
then the manner at which the port qualifier is entered may be
system dependent.
\item Syntax for telnetting from different operating systems differ.
Some common cammand syntaxes are: (angle brackets are for
readability, do not type these in literally)
\item Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
\begin{itemize}
\item telnet $<$host$>$ $<$socket\#$>$
\end{itemize}
\item Other possibilities to try:
\begin{itemize}
\item telnet console $<$host$>$ (for 2000 port)
\item telnet $<$CR$>$ open $<$host$>$:$<$port\#$>$
\item telnet $<$host$>$/$<$port\#$>$
\item telnet $<$host$>$/port=$<$port\#$>$ (for Multinet on VMS)
\end{itemize}
\item If all else fails, ASK your system administrator or check system
documentation.
\end{itemize}
\vspace{.2in}

\noindent
{\bf Are there any Telephone BBS's which have ham related files?}

WB3FFV has one, phones are 301-625-0817 or 301-625-9482 or
301-625-9663. Data settings are 8 bits, NO parity, 1 stop bit.
Login is bbs, no password.
This BBS is also available via UUCP, login is uucpanon, no password.
For a listing of available archived, try:
uucp wb3ffv!$\tilde{ }$/FILES/usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings
are 8 bits, NO parity, 1 stop bit.
\vspace{.2in}

\noindent
{\bf Are there Dialup News services or BBSs for Amateur Radio?}

There are two major news services for ham radio. Both are run by
volunteer hams and provide bulletins of specific interest to amateurs,
hence they are perfectly legal to rebroadcast on ham bands according
to FCC Regulation 97.111B(6). To lessen the load on the dialup lines,
consider getting your local repeater operator to rebroadcast it, or
tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:

\begin{center}
\begin{tabular}{l c} \hline
Chicago & 1-708-289-0423 \\
N.Florida & 1-407-259-4479 \\
Los Angeles & 1-805-296-2407 \\
Los Angles & 1-213-462-0008 \\ \hline
\end{tabular}
\end{center}

There is a comprehensive worldwide phone BBS list put together by KA2UGQ, available from Simtel20, the Simtel Mirror on Wuarchive, and the Supplemental Archives at ftp.cs.buffalo.edu.
\vspace{.2in}

\noindent
{\bf Are there any on-line callbooks and geographical name servers?}

If you are at an Internet site you can connect using telnet to one of the two primary servers:

\begin{itemize}
\item callsign.cs.buffalo.edu (currently 128.205.32.4)
\item ham.njit.edu (currently 128.235.1.10) (alias plan9.njit.edu)
\end{itemize}

There is also a general geographical name server at:

\begin{center}
martini.eecs.umich.edu (currently 141.212.100.9)
\end{center}

The callbook servers sit on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like
\begin{center}
telnet callsign.cs.Buffalo.EDU 2000
\end{center}

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory
and they support fairly detailed help facilities. The first command
you should execute when connecting to one of these servers is
``info''.
This will list general info about that server and how to use it. You
should then type ``help'' to list the various commands available.
Typing ``help'' followed by a command name will give you a little more
detail about that command. Servers allow searches by call, last name,
zip code or city and also provide regular expression filters to trim
your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty
Carruth, N7IKQ. This database currently contains US and Canadian
callsigns and it does not contain club calls. A new version of the
database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com
(The UUCP address is ...!uunet!dptspd!callbook). In the body of the
text, say ``lookup'' followed by callsigns you want to look up. If
your mailer appends signature files, you should put a line ``quit'' at
the end of your request (before the signature file). If you want
help, put the word ``help'' on a line by itself. Here is what a
request might look like:

\begin{center}
\begin{tabular}{l}
help \\
lookup kc1sp wn4bbj \\
lookup n0fzd \\
quit \\
\end{tabular}
\end{center}

If you are a packet radio station, callserver data is available from
\\ REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,
separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The REQQTH address is for the AX.25 radio-linked amateur packet
network, *NOT* the Internet. If you attempt to send Internet mail to
this address, and use the old .NA suffix instead of the new .NOAM
suffix, it will get routed to Nimibia (Internet suffix .na) which is
currently paying a lot of money for misdirected ham mail. Help
maintain a positive example for amateur radio and please do not
attempt this!
\vspace{.2in}

\noindent
{\bf Where can I find modifications for my radio to extend its capabilities?}

There are two ftp servers that has this data:
\begin{itemize}
\item wsmr-simtel20.army.mil
\item wuarchive.wustl.edu (BITNET ONLY)
\item Another FTP site to try is 129.100.22.100.
\end{itemize}

There is a new server at pcserver@novell.business.uwo.ca. In the
body of the email, send the command HELP.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:

\begin{center}
\begin{tabular}{l}
SP REQFIL@N2IMC.NJ.USA.NA \\
Subject: MODS$\backslash$Dir.1 \\
/EX \\
\end{tabular}
\end{center}

To get the mod, send to same place, with
Subject MODS$\backslash$Filename.ext.

REMEMBER that any modification is likely to void your warrantee and
that these mods are NOT guaranteed to work.

\newpage

\noindent
{\Large{\bf Part 3 - Amateur Radio Organizations and Publications}} \\

\noindent
{\bf Where can I find VE sessions in my local area?}

VE sessions are often announced in the local newspapers, but more
often, they are announced by local radio bulletin boards. The
local packet BBS will most likely have a monthly updated schedule
for VE sessions. ARRL or W5YI can generally be called and asked for
local VE sessions as well. Don't forget that you will need the
following when you go in for an upgrade: a copy of your current
Amateur license; your original Amateur license; any CSCEs (duplicate
not required), if applicable and less than a year old; a picture ID,
preferably a driver's license, passport or visa; and the VE test
fee (approximately \$5 right now).
\vspace{.2in}

\noindent
{\bf How do I use the incoming and outgoing QSL bureau?}

To use the outgoing QSL bureau, you must be a member of ARRL. In
general, you send a bundle of foreign (not States!) QSL cards to
the outgoing bureau in Newington, Connecticut, along with a label
off of your QST magazine (which shows ARRL membership), along with
\$2 per pound of cards (approximately 150 cards) or \$1 for 10 cards

or less.

To use the incoming QSL bureau, you do NOT have to be a member of
ARRL. Send one or more Self-Addressed Stamped Envelopes
(size 5$\times$7
or 6$\times$9, no bigger, no smaller)
with one ounce of postage attached
and with your callsign in 3/4" letters in top left hand corner where
the return address label would go. If you expect a large quantity
of foreign QSL cards, attach extra money or postage with a paper
clip. Send the envelopes to the QSL bureau for your callsign area.
If your callsign is xx3xxx/5, you would send it to the 3rd call
area, NOT the 5th call area. Addresses for QSL bureaus are listed
in QST; if you don't have access to a QST magazine, ask another
ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau,
not considering foreign QSL bureaus, is about 3 months. Foreign QSL
bureaus and hams can be as fast as 2 months or as slow as TEN YEARS,
while average is about 6-12 months.
\vspace{.2in}

\noindent
{\bf Are there any news groups for CAP?}

There is no news group just for Civil Air Patrol discussions. However,
rec.aviation is appropriate for CAP aviation discussions and for
CAP radio information, these rec.radio.amateur.* groups are available.
In addition, there is a mail digest just for CAP. Subscribe by
emailing to capital-request@cps.udayton.edu. Submit articles by
emailing to capital@cps.udayton.edu. CAP related files are also
stored on the FTP site sunburn.cps.udayton.edu in pub/capital.
\vspace{.2in}

\noindent
{\bf What's the name of the QRP club that issues QRP numbers?}

\begin{center}
\begin{tabular}{l}
QRP Amateur Radio Club International \\

\end{tabular}
\end{center}

For other questions (ARRL policy issues, etc.), try
2155052@mcimail.com, which sends them to the front office.

The Washington Area Coordinator for the ARRL, Perry Williams W1UED
(sort of our ``lobbyist'' to the FCC and Congress) has mcimail access
at 2242662@mcimail.com.
Fred Maia, W5YI, another large VEC, also has mcimail access at
3511297@mcimail.com.
\vspace{.2in}

\noindent
{\bf What magazines are available for Ham Radio?}

Your local ham store may have some, but here's some popular ones
(this is NOT a complete list!):
\begin{itemize}
\item QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and
contesting
\item CQ The Radio Amateur's Journal,
76 North Broadway, Hicksville, NY
11801 - beginner ham radio articles
\item 73 Amateur Radio Today, WGE Center,
Forect Rd, Hancock, NH 03449,
FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet
70310.775@compuserve.com - more technical ham radio articles
\item QEX, ARRL, 225 Main St, Newington,
CT 06111 - more technical projects
\item WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655.
Subscriptions to 201 Latrhop Way, Ste D, Cacramento, CA 95815,
(800) 365-SUBS - lots of special interst columns, like QRP,
ATV, YL, etc.
```

```
\item W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 -
up-to-date information on Amateur Radio happenings, including
VE information and statistics
\end{itemize}
\vspace{.2in}

\newpage

\noindent
{\bf How do I join MARS?}

To join MARS, you have to be 14 years or older (parental consent
required under age 17), be a US citizen or resident alien, possess a
valid Amateur Radio license, possess a station capable of operating
on MARS HF frequencies, and be able to operate the minimum amount
of time for each quarter (12 hours for Army and Air Force; 18 hours
for Navy-Marines). Novices must upgrade to Technician within 6
months, else be dropped from MARS. No-Code Techs can apply, provided
they have transmit and receive HF capability for MARS frequencies
(they don't need transmit capability for Amateur HF frequencies).
For
application forms contact: \\

\noindent
{\bf How do I join RACES?}

Contact your nearest Civil Defense or Emergency Management Agency.
The Radio Amateur Civil Emergency Service is a part of a municipal,
county, or state government. This does not mean, however, that
every such government has a RACES program. If your government does
not have a RACES, ask them to refer you to the nearest jurisdiction
that does have a RACES program.

\end{description}
\vspace{.2in}

\noindent
{\bf I am looking for a specific ham, can anyone help me find him?}

Rather than sending out a message on Usenet, you might first try
directory assistance from the phone company or the locator service
provided by the Salvation Army. A Salvation Army post in your
local area may be able to help you. If you have his/her callsign
or name, you might also try one of the on-line callservers shown
above.
\vspace{.2in}

\noindent
{\bf Is there an on-line copy of the FCC Part 97, or FCC Amateur Radio
allocations or question pools?}

\noindent
Part 97 is available by ftp from wuarchive.wustl.edu, file is
```

mirrors/misc/hamradio/part97.txt.

An ASCII copy of the question pools are avilable by ftp from
uxc.cso.uiuc.edu (128.174.5.50) in
/pub/ham-radio/$<$class$>$-pool.txt.Z,
where $<$class$>$ is novice, technician, general, advanced or extra.
\vspace{.2in}

\noindent
{\bf Can I post my neat new ham related program on rec.radio.amateur.misc?}

This is really not a good idea, since many of the readers receive
these newsgroups as mail digests. Posting is also a one-shot thing.
If you post and someone missed it, it is gone. A better way would be
to announce the existence of your program here, along with
information on how to obtain a copy of your program. You can also
submit it to one of the FTP archive sites, which will allow the world
to access it without you having to mail it to each requestor. If you
just GOTTA post it somewhere, post it to more appropriate groups,
like comp.sources.unix or alt.sources or comp.binaries.pc.

\newpage

\noindent
{\Large{\bf Part 4 - Common Advanced and Technical questions}} \\

\noindent
{\bf What are the different US amateur classes and what can each of them do?}

\begin{description}
\item[Novice] has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice priveleges on 10 meters, and full priveleges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
\item[Technician] has full priveleges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
\item[General] has all Technician priveleges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
\item[Advanced] has all General priveleges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
\item[Amateur Extra] has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.

```
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.
\end{description}
\vspace{.2in}

\noindent
{\bf I'm confused. What do all those abbreviations mean???}

\begin{description}
\item[AM] Amplitude Modulation
\item[AMTOR] Amateur Teleprinter Over Radio. A more sophisticated version
of RTTY. Also used commercially as SITOR (Simplex Teleprinter
Over Radio).
\item[ATV] Amateur Television - a way to see who you're talking to!
\item[CAP] Civil Air Patrol is a volunteer organization that searches for
downed aircraft and missing kids and uses frequencies just
outside of the ham bands and often uses modified Amateur radios
\item[CB] Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate
\item[CQ] An on-the-air request for a conversation with anyone
\item[``dupes''] A dupe sheet is a duplicate check sheet, in matrix format,
used
to quickly check that you have not had a ``duplicate'' contact
with someone (on a specific band or mode) in a contest
\item[FCC] Federal Communications Commission, the ``law enforcers''
\item[FM] Frequency Modulation
\item[FieldDay] A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
\item[HF] High Frequency - 3 MHz to 30 MHz
\item[HT] Handy-Talky, a shorthand for ``hand held radio''
\item[LF] Low Frequency - 30 kHz to 3 MHz
\item[MARS] Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
\item[NTS] National Traffic System, a way to send radiograms
\item[OM] Old Man, refers to any ham, including female hams
\item[packet] computer bulletin boards/electronic mail via Amateur Radio
\item[PRB] Private Radio Bureau, administers Amateur and CB services
\item[QSO] One of the Q signals used in Morse code to mean ``conversation''
\item[RTTY] Radio Teletype - older form of computer communications on HF
\item[SAREX] In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
\item[SSB] Single Side Band - need less band width than AM or FM
\item[SSTV] Like ATV but slower and used on lower bands
\item[UHF] Ultra High Frequency - 300 MHz and above
\item[ULF] Ultra Low Frequency - 30 Hz to 300 Hz
\item[VHF] Very High Frequency - 30 MHz to 300 MHz
\item[VLF] Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
\item[YL] Young Lady, non-ham girlfriend or female ham
```

\item[XYL] eX-Young Lady, or wife
\item[2m] Shorthand for ``2 meters'', which is a reference to the
wave-length of a common Amateur frequency band used for local
communications
\end{description}
\vspace{.2in}

\noindent
{\bf What do all those ``tones'' mean?}

Sub-Audible Tone: A low tone that you're not supposed to be able to
hear. It's used as a ``PL Tone''. PL is ``Private Line'',
a trademark
of Motorola for their implementation of CTCSS (Continuous Tone Coded
Squelch System). Basically, the transmitter sends the signal with
the Sub-Audible tone and the receiver only opens when it hears signals
with that tone. Signals without the proper tone are ignored. This
is useful for ``closed'' repeaters, or for repeaters on the same
frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone
Multi-Frequency, or ``Touch Tone'' which is a
trademark of AT\&T. DTSS
probably means Dual Tone Squelch System and refers to the feature of
providing a predefined sequence of Touch Tone digits to open the
repeater for transmit. DTSS is an alternate method from CTCSS, which
provides a way to use a ``closed'' repeater even if your
radio doesn't
do Sub-Audible Tones.
\vspace{.2in}

\noindent
{\bf Where can I learn more about Amateur Radio if I live outside the USA?}

Write to the ARRL and ask. They can usually tell you how to get a
license in your country.
\vspace{.2in}

\noindent
{\bf How can I get a ``reciprocal license'' if I am a licensed ham
from another
country?}

You need to submit a FCC Form 610-A to the FCC, PO Box 1020,
Gettysburg, PA 17326. They will then send you a reciprocal permit
for alien amateur licensee (FCC Form 610-AL). You must be a citizen
of a country with which the United States has arrangements to grant
reciprocal operating permits to visiting alien Amateur operators.
\vspace{.2in}

\noindent
{\bf My apartment complex does not allow outdoor antennas, now what do I do?}

First of all, don't dispair. Many hams have similar problems. Many
books offer advice for the growing group of hams that cannot put up
antennas. Some options are:
\begin{itemize}
\item Install an ``invisible'' antenna made of magnet wire.
\item Disguise an antenna as a flag pole.
\item Install an antenna in the attic.
\item ASK the apartment manager. You may find they will let you put up
something as long as it ``is invisible'' or ``doesn't disturb your
neighbors'' or ``doesn't attract lightning''.
\item Operate primarily from your car.
\end{itemize}
\vspace{.2in}

\noindent
{\bf I got TVI...HELP!!!}

Here's some hints on Television interference, but this is not a
complete list. There are also books on the subject available from
ARRL.
\begin{itemize}
\item If cable TV is an underground feed, look for central distribution
box. Check for a grounding rod.
\item Try installing torroids on the cable TV cable close to the TV, and
maybe torroids on the AC cord as well.
\item VCRs are notorious for RF leakers, try disconnecting the VCR.
\item Check to see if interference is better or worse when cable is
disconnected and you use rabbit ears instead. It could be the
cable company's problem!
\item Calling the cable company may get results, since they are also
responsible for RF leakage from their equipment. However, they
are very often obstinate. Good luck!
\item Try moving the radio antenna further away from the TV sets. Make
sure the SWR is LOW.
\end{itemize}
\vspace{.2in}

\noindent
{\bf What do you need to get started in packet radio?}

Packet radio is a digital form of communication using radios. There
are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use
packet radio, you'll need a radio (2 meters or 1.25 meters is most
popular), a box that converts radio signals to digital signals that
a computer can understand (called a TNC or terminal node controller)
and a computer or terminal. For some computers or TNCs you may need
special software as well. However, most TNCs and computers get along
quite well with just a terminal emulator software package. Most
personal computers can be interfaced to use with packet radio. Since
there are many digipeaters, generally even an HT will work with

packet radio.

For more information on packet radio, you might try TAPR (Tucson
Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).
\vspace{.2in}

\noindent
{\bf What do I need to get started in satellite communications?}

For more information about Amateur Satellite Communications, try
AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington,
DC 20044 (301-589-6062). They also have an international net on
Sundays on 14.282 MHz at 1900Z.
\vspace{.2in}

\noindent
{\bf Did you know that you can get college credit for being a ham?}

It's true! You can receive up to 14 credits in electronics and
engineering thru placement tests for CLEP (College Level Entrance
Placement) exams and DANTES (Defense Activity for Non-Traditional
Educational Support) exams if you have an Advanced or Extra class
Amateur license. For more information, ask your campus education
office or (for DANTES) your military education office.
\vspace{.2in}

\noindent
{\bf On what frequencies does JPL and GSFC retransmit the shuttle audio?}

\begin{center}
\begin{tabular}{l c c c c c c} \hline
Station & VHF & 10m & 15m & 20m & 40m & 80m \\ \hline

\end{tabular}
\end{center}

\noindent
All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.

\newpage

\begin{itemize}
\item WA3NAN - Goddard Space Flight Center (GSFC), Greenbelt, MD
\item W6VIO - Jet Propulsion Laboratory (JPL), Pasadena, CA
\item W6FXN - Los Angeles, CA
\item K6MF - Moffett Field, CA
\end{itemize}
\vspace{.1in}

```
\noindent
{\bf Can I take my HT on an airplane and operate it if I get the permission
of the captain?}

It is illegal to operate an amateur radio (transmit AND receive!)
aboard a commercial airliner. The captain is NOT authorized to give
you permission to use a radio. For reference, the pertinent portion
of the Federal Aviation Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HY (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operations and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the Pilot-in-Command. It is possible for the
radio to interfere with the plane's navigation or communication
equipment, so be sure to ask first, and always obey the requests of
the PIC. He knows his airplane and radios better than you do.
\vspace{.2in}

\noindent
{\bf What is the standard for measuring Morse code speed?}

The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:
\begin{center}
\begin{tabular}{l c l c l c l c l l }
PPPPPPPPPPPPP & & AAAAA & & RRRRRRRRR & & I \ I \ I \ I \ I &
& SSSSSSSSS & \\
$\cdot$ \ \hfill {\bf -} \hfill \ {\bf -} \hfill \ $\cdot$ &&
$\cdot$ \hfill {\bf -} &&
$\cdot$ \hfill {\bf -} \hfill $\cdot$ &&
$\cdot$ \hfill $\cdot$ &&
$\cdot$ \hfill $\cdot$ \hfill $\cdot$ & \\
1 \hfill 1 \hfill 3 \hfill 1 \hfill 3 \hfill 1 \hfill 1 & \ 3 \ &
1 \hfill 1 \hfill 3 & \ 3 \ &
1 \hfill 1 \hfill 3 \hfill 1 \hfill 1 & \ 3 \ &
1 \hfill 1 \hfill 1 & \ 3 \ &
1 \hfill 1 \hfill 1 \hfill 1 \hfill 1 & 7 \\
\hspace{.17in} $\Uparrow$ & & & $\Uparrow$ & & & &
&& $\Uparrow$ \\
\multicolumn{2}{l}{ \hspace{.17in} Intra-character} & &
\multicolumn{4}{l}{ \ Inter-character} & &
\multicolumn{2}{l}{ \hspace{.24in} Inter-word } \\ \\
\multicolumn{10}{c}
{(1+1+3+1+3+1+1+3+1+1+3+3+1+1+3+1+1+3+1+1+1+3+1+1+1+1+1+7=50)} \\
\end{tabular}
```

```
\end{center}

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or
one count every 240 milliseconds. 13 words-per-minute is one count
every $\tilde{ }$ 92.3 milliseconds. This method of sending
code is sometimes
called ``Slow Code'', because at 5 wpm it sounds VERY SLOW.

The ``Farnsworth'' method is accomplished by sending the dits and dashes
and intra-character spacing at a higher speed, then increasing the
inter-character and inter-word spacing to slow the sending speed down
to the desired speed. For example, to send at 5 wpm with 13 wpm
characters in Farnsworth method, the dits and intra-character spacing
would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the
inter-character spacing would be 1.443 seconds and inter-word spacing
would be 3.367 seconds.

\end{document}
```

4091. Protecting receiver front-end

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-22 17:12:31 UTC
From: hhg9751@tamsun.TAMU.EDU
Message-ID: <5062@tamsun.TAMU.EDU>
Source record: 292264

Any ideas for protecting the front end of a receiver
when that receiver's antenna is near another antenna
that is used for transmitting? Not really a TR switch
but one that would sense the high level of RF and limit
the amount passed through to the receiver. Perhaps
someone could post or e-mail a simple solution/circuit?
Thanks...73...Herb K5HG

Herb Graeber hhg9751@tamsun.tamu.edu

4092. Re: Cellular phone/UHF TV questions

>
>Yes. Turn yourself in to the nearest FBI office for immediate
>disintegration.

Funny thing about this. Just the other evening I heard a couple hams
discussing cellular reception with scanners. The were discussing this
on one of the local 2m repeaters. One was saying how his friend had added
computer control to his scanner so he could track hand-off of calls
between cells. The other ham was saying how he would listen to cellular
and call the local police (san jose, I believe) if he heard something
suspicious. He said he did this a couple of times! But, apparantly,
the police weren't really interested with his information. (Maybe he
should've called the newspapers.) No joking; these guys were serious.

Surely, these folks have heard that listening to cellular is "illegal".
Let alone divulging information. Granted if there was a life threating
situation involved I think the police could have done something, but a
case against, say, drug dealers wouldn't hold up in court.

4093. Oblasts award

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-22 18:13:20 UTC
From: oo7@ut-emx.uucp
Message-ID: <59904@ut-emx.uucp>
Source record: 292266

Does anyone out there have this award and know for sure whether it is given for mixed mode QSOs? This is the USSR award for confirming QSOs with 100 different oblasts. The K1BV directory says "all contacts must be either CW or phone", which could just mean "no RTTY, smoke signals, whatever" or it could mean that all cards must be for the same mode.

Also, does anyone have a feeling for what the changes in the USSR will do to this award? Presumably the oblast system will not remain as the republics become independent. While the Baltic republics represent only one oblast each, some of the others contain a large number. I guess Gorbachev didn't consult the hams before making these drastic changes... I need to get my application in while they still have some certificates for this award, I suppose - there goes another 14 IRCs (or one rouble - anyone have a spare one?...)

>and make some new friends. At the minimum learn thanks in
>a couple of languages. You would be suprised what happens.

Je suis d'accord. C'est dommage que nous Americains ignorent les
langues etrangeres. Je tache quelquefois parler en Francais
lorsque j'entends une emetteur "F".

Leider bin ich nicht so gut auf Deutsch. Ich kann "danke schoen
fuer das QSO" sagen, aber ich habe Angst viel mehr zu sagen.

The point is, trying out your language skills on the air
is fine, but when you are trying to get your callsign across
under less-than-ideal conditions, the ICAO phonetics are best.

4098. Re: Your favorite band - on the auction block?

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-22 21:16:08 UTC
From: geb@dsl.pitt.edu
Message-ID: <12190@pitt.UUCP>
Source record: 292269

As anyone who owns a scanner knows, there are vast areas of spectrum
assigned to the feds that are silent almost all the time. Selling
these off would be a good idea and it would relieve the pressure on
the ham bands. If they are worried about needing them again in a
war, they can put some clause in saying they get them back in wartime.

Source record: 292274

In <5062@tamsun.TAMU.EDU> hhg9751@tamsun.TAMU.EDU (Herb Graeber) writes:

>Any ideas for protecting the front end of a receiver
>when that receiver's antenna is near another antenna
>that is used for transmitting? Not really a TR switch
>but one that would sense the high level of RF and limit
>the amount passed through to the receiver. Perhaps
>someone could post or e-mail a simple solution/circuit?
>Thanks...73...Herb K5HG

I've successfully used diodes (a pair, one polarized each way) from antenna terminal to ground. This positively limits the input signal to about .5 volts unless the input is so large that the diodes blow. Very simple and, at least for me, effective.

Cross-posted to: misc.forsale.computers,misc.forsale,rec.radio.amateur.misc,rec.radio.swap

Miscellaneous items for sale (all prices negotiable):

1 Micropolis 1325 70MB hard drive 25ms seek (I think) $200

1 Fujitsu 70MB hard drive with SunOS 3.5 on it. $250

1 Yaesu FT-747GX amateur radio transceiver ONLY (no power
cord or mic) ... very lightly used, $700 NEW $550

1 MFJ-1278 packet controller with RTTY, AMTOR, WEFAX, etc.
along with advanced pack of software ... $375 NEW $200

1 Radio Shack PRO-2011 scanner ... covers all the standard
frequencies. doesn't do band scan, only memory scanning... $75

If you don't like my prices, make me an offer! You can either respond to this
account, send me email at erc@khijol.uucp, or call me on the phone.

Source record: 292272
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

Does anyone know of the least expensive source for 6146B tubes
(and the 12BY7A drivers) ?
Does anyone have a few new ones to sell ?

I am also looking for a service manual on the Kenwood TS-530S hybrid xcvr,
just picked one up and am working it over. If you have one laying around,
please write me.

One more question for anyone with time/inclination to answer: What is
a Kenwood R-2000 (good shape, just realigned by factory) worth ? I may
be selling one soon, and want to give a person a fair deal, and still be
able to pay off the xcvr I just bought !

Thanks for any replies.

4104. Re: How to treat new Hams (VERY LONG!)

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-22 23:41:43 UTC
From: allbery@NCoast.ORG
Message-ID: <1991Oct22.234143.33@NCoast.ORG>
Source record: 292191

As quoted from <9110211808.AA23869@tecnet1.jcte.jcs.mil> by mgb@tecnet1.jcte.jcs.mil:
+---------------
| A guy wants to bootleg a radio... says that "the airwaves are mine to
| do with as I see fit". Keep in mind this was not a teen-ager saying this
| but an adult, and some peoples response is: "Be patient, someday he'll be
| a great ham... maybe". Do people really think that this approach is going
| to work? That we should foster someone with this attitude and elicit him
| to join the ranks of amateur radio? Ok, fine... let's say we do that and
| he ends up being a ham like the one described above. What then?
+---------------

ONE. You are assuming that all of the messages we saw come from cleveland.freenet.edu came from the same person. But unless you actually saved them all and checked them, I wouldn't bet on it; they use 2letter+3digit IDs. I thought I saw two different ones, plus different styles and different .signature files.

TWO. The problems you are pointing to with respect to amateur radio are the same problems affecting all of society. "Me first!" has become the one and only rule in most areas. So tell me, are you doing anything about the situation outside ham radio or are you just looking to protect your little clique?

THREE. I would argue for "start soft --- but they get ONE warning. Then the gloves come off." Playing the sn*tty sh*t from the very start won't make ham radio look very good; on the other hand, letting people know where the line is AND ENFORCING IT WHEN IT IS OVERSTEPPED will say a lot.

4105. Re: How to treat new Hams (VERY LONG!)

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-22 23:48:53 UTC
From: allbery@NCoast.ORG
Message-ID: <1991Oct22.234853.684@NCoast.ORG>
Source record: 292210

As quoted from <1991Oct22.113217.3288@bb1t.monsanto.com> by sekell@bb1t.monsanto.com:

```
+---------------
| tested for or studied in a book, it must be learned by example. However, most
| of the "old fart" community runs away when they hear a legion of no-codes
| coming on the air. As a result, all I hear on the air is no-code techs talking
| to no-code techs and all parties floundering in innocent ignorance and
| misinformation. As long as other hams run away from the no-code techs, nothing
| will change. The no-codes (and other new hams) will follow whatever example
| they hear on the air - including bad examples and no examples. There will
| always be people who are destined from birth to be lost causes, but youth
| especially will benefit from good example.
+---------------
```

This is clearly a regional phenomenon: around here, many of the "old fart" types do NOT go away when the "no-codes" come on the air. They're willing to talk, they're willing to help, they're willing to teach.

The locals who aren't willing to talk to "no-coders" have other ways of expressing themselves, by the way. Much of the repeater jamming I've heard around here recently seems to be aimed at no-code Techs....

I'm looking at handhelds in anticipation of receiving my technician's license from the FCC and wondered if anyone knows whether any triband (140,450,1200 Mhz) handhelds have appeared or soon will appear on the market?

If the answer is no, then which dualband(140,450 Mhz) handhelds get the best recommendations? I've heard that ICOM has a BAD reputation for service and that Kenwood's reputation is much better. Thanks in advance.

4111. College net continues!

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-23 04:35:40 UTC
From: tucker@eedsp.gatech.edu
Message-ID: <1991Oct23.043540.8929@eedsp.gatech.edu>
Source record: 292179

The college net continues! Remember, this net is for all college
amateur radio stations, or others interested in college radio club activities.

Here are the details. We will meet on 15 meters first at 0100Z then
move to 40 meters at 0145Z. That's tonight, Wed. Oct 23. (Thurs in GMT.)

The 15 meter frequency will be 21.255 +QRM. Hopefully, this will work out
for everyone. The 40 meter frequency will be 7.255 +QRM.

I hope to hear everyone on the net this week. On 15 meters, listen for
W4AQL or a relay station. The skip is too long for us on 15 meters, really.

By the way, there is a mailing list for college stations, the ham-univ
list. That is the best way to stay up to date on the college net
activities. If you want to subscribe, drop me a note and I'll tell
you how.

73, Jeff

4112. Re: How to treat new Hams (VERY LONG!)

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-23 05:31:06 UTC
From: cs00wlh@unccvax.uncc.edu
Message-ID: <3857@unccvax.uncc.edu>
Source record: 292196

As a soon-to-be no-code-tech, I have a few comments from the other side. The main point I would like to make is PLEASE don't tune somebody out just because they are in it via one of the alternate paths. DO reach out to newcomers and make them feel welcome.

Mark Bitterlich writes:

:: I seem to sway back and forth between two viewpoints regarding this. One
:: side says that we should welcome everyone with open arms, overlook any
:: small improprieties ... with the hopes that eventually the individual
:: will develop respect and consideration for the other amateurs...
::
:: The other side says to be friendly with such a fellow at first, but
:: then become a little more forceful as time goes on and the behavior
:: persists.
::
:: There is even a third approach, and that is to be VERY forceful right
:: from the gitgo, and make clear that someone is doing things very wrong
:: and to do so immediately and in no uncertain terms. But this approach
:: is dangerous, and usually alienates people and tends to push them towards
:: some really bad behavior, which we seem powerless to prevent.

My expectation is that, after I get the equipment and ticket, I will probably lurk around for a while until I get a feel for the local procedures, then attempt a QSO. At some point, I will probably commit some gaffe of etiquette or procedure. I might even, inadvertently, break a rule. I expect and hope that other hams will politely correct me and I will cheerfully apologize and amend my ways. That is how learning takes place. Please don't be rude or chiding, at least not on the first offense. Use a correction as an opportunity to get to know a newcomer, and make him feel welcome.

Go with the 2nd approach. The first is irresponsible, the third is obnoxious unless it is really warranted. (E.g. give no quarter to someone who won't clear a frequency for an emergency when asked.)

<text deleted>

:: Now comes the real shock. Don't ask me why... but the young hams in this
:: area gravitate towards this individual.

It could be that some of the new guys are jerks anyway. After all, 80% of everything is junk. Try not to miss out on the 20%. Perhaps it would be effective preventive medicine to keep an ear out for young or new operators and actively try to include them in conversations and activities.

::
:: FACT: FCC enforcement on people who ignore regulations has diminished.
::
:: FACT: The NUMBER of people who choose to be on... well let's just call
:: it "the wild side" is on the increase.
::
:: FACT: Personal effort required to obtain a license has decreased tremen-
:: dously over the last decade.

The last item probably has less to do with the problem of undisciplined operators than the availability of low-cost entry level "appliance" type tranceivers and scanners. These get people interested and on the air much more quickly. After all, there are no character references required, even for an Extra License: only the ability to pass a largely technical test and send CW at a certain rate. Don't tell me that there were never lids before. Amateur radio should not be elitist, nor an invitation-only club.

Computer hobbyists have undergone a similar technical transition. When I first became interested in computers in the late seventies, it was possible to do a reasonable homebrew system that was as good as anything on the market at comparable price. Nowadays, an XT class computer need be no larger than a deck of cards, and there is not really any point in trying to homebrew a computer unless you have a VLSI lab in your basement. (Interfaces are another matter.) I still see articles about people putting 6MB of RAM and a 200MB hard disk on a TI/99, and I guess that's great if they enjoy it, but a Next would be cheaper. The transtion definately changed the character of personal computer users. The average technical expertise is lower, but the number of users is much higher.

It is clear from these threads that there is an enforcement problem. Perhaps the self-policing should be made more literal. Experienced hams with high license classes could be nominated by local and regional amateur organizations to be "deputized" by the FCC and given authority, in effect, to issue citations. This would take a load off of the FCC. Also, has anyone tried simply documenting abuse via logging, tape recording, etc. and presenting this to the correct authorities? (If recording is not legal for this purpose, perhaps it should be.)

:: Back to the start of this letter... how do we treat new hams? How do we
:: treat OTHER hams in general? My question is this: Is a new ham joining
:: the FRATERNITY of Ham Radio, or is there no such thing anymore and every
:: ham sets his own definition of what ham radio is really about?

I think a fraternity is a nice idea, but lets call it something else. There needs to be more women involved. I went to a hamfest a few years back where they had a knitting session for the wives. What about the guys who might be there because their wives are hams?

:: It appears that the latter definition has lately become popular. Anyone
:: who tries to "coerce" anyone into ANYTHING is a "BAD GUY". Personal

:: freedom is paramount, "who are you to tell me ANYTHING", etc., etc., etc.

I never heard of a freedom that didn't have attached resposibilities.
How absurd!

sekell@bb1t.monsanto.com writes ....

:: On the subject of no-code techs: I have observed the behavior of this new
:: class of hams over the last few months and have decided the following:
::
:: - A great deal of them are very young
:: - Many of them, both children and adults, are "loners"
:: - Many of them are from the CB world (judging by the amount of 11m
:: gear that they offer on local swap nets and the occasional CB lingo)
:: - Most of them motivated themselves into the hobby with little or
:: no outside influence or assistance
::

A recurring theme here is youth. How is that defined? Are we talking
about teenagers? I'm dangerously close to 30, so am I old or young
here?

Actually, anything that gets kids interested enough to learn the
contents of the Tech exams sounds great to me. I might try to get my
eldest interested. Even if they just memorize it, the little bit of
astronomy and atmospheric physics involved might get somebody
thinking.

CB gear is inexpensive and requires little preparation. I will admit
to having been a CBer for a while about 10 years ago before it got
really uncivilized. (In fact, before they stopped issuing licenses.)

I motivated myself into the hobby with no outside influence. Some
people know some hams, some don't. I have had a passing interest for
years, just never had the money. I do plan to learn CW, in time, but
I don't need it immediately. I have introduced myself to the local
ARS. They are fine people and I will probably join by-and-by.

:: Most of the problem is just a lack of good example. "Elmering"
:: on 2m FM just doesn't seem right....

Why not? It seems to me that helping out newcomers is a resposibility
that comes with being a ham. Surely even a newcomer to the DX bands
occasionally needs a little guidance.

Basically, its all said in the subject line.. I was curious what was the
difference between these kinds of modems that I have seen around..

g3ruh, k9ng, psk, texnet, and tapr

Whats the difference??? Which of these are supposed to work on VHF without
doing anything drastic to the radio? The Kantronics DataEngine's DE9600
modem (supposed to be g3ruh compatible) is said to work at VHF without
any serious modification to the radio.

Thanks,
Derek Young

4116. Auto battery question

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-23 12:04:37 UTC
From: m21198@mwunix
Message-ID: <m21198.688219477@mwunix>
Source record: 292212

I power my APlink station by floating an auto battery on a couple of small power supplies. It usually floats at about 13.3 volts. This works fine for a month or so, then the battery seems to lose its ability to deliver current, although it still floats at about the same voltage and reads OK on a hydrometer. I would suspect it was losing equalization, but the hydrometer shows all cells about the same and full. Does anyone know what is going on and what to do about it?
John WA9FCH (McHarry@MITRE.org)

>
>I have read numerous articles on how easy it is to get into satellite amateur radio. "You don't really need the high priced sets," is also often stated. I have yet to see a specific list of recommended equipment, other than the high priced units.
>
>Could someone recommend an inexpensive way to go, as well as the features and power REQUIRED for satellite operation. For example, would the Alinco DR-570T work: mobile, 2m/440, FM, 45 watts?

In general, FM is prohibited over the amateur satellites. It is a severe drain on the transponder for the amount of intelligence transferred. The preferred modes of operation are CW and SSB. You need weak signal equipment to be effective on the satellites. The data only Microsats are somewhat of an exception since they are quite strong, but passes are short and the footprint is small.

Any of the Icom multimode radios from the IC-211 forward will work nicely. The fancy multiband multimode rigs like the IC-970, Kenwood 790A, and Yaesu FT-736 are the Cadillacs, but the lesser radios will do the job. You will need between 50 and 500 watts ERP to access the satellites with signals of the same strength as the beacon. You should never be stronger than the beacon as this is considered very bad operating practice robbing others of transponder power. The transponder's power is shared among all users and must be conserved. A 13 db circular polarized gain antenna and an adjustable 2.5 to 25 watt radio is a good way to do this.

The most important part of a satellite station is the receiving setup. You should use a gain antenna with a Gasfet preamp mounted at the feedpoint. This will set system noise figure. With a 13 db antenna and a good Gasfet preamp, you should be able to hear the raw transponder noise floor pump from spin modulation. This insures that you will be able to hear any signal on the satellite.

To work the popular mode B satellites, you will need to cover the 145 Mhz and 435 Mhz bands. You transmit on 435 and receive on 145. If you already have an HF rig that covers 10 meters, you can use a transverter to 435 and a receiving converter from 145. This is not ideal because you can't listen to your own signals coming back. A better solution is to use a separate general coverage receiver with the 2 meter receiving converter. Another cheap way to go is to use an old commercial FM transmitter strip as a CW transmitter at 435 and a receiving converter from 2 meters to the 10 meter band.

If you don't have an HF rig, or don't want to tie it up, and you want to use voice through the satellite, then you should look at the multimode

2 meter and 70 cm radios. IC-211s are often available for $250 at hamfests and IC-451s for around $300. I've used this setup with a Mirage D1010N amplifier and a ARR144VDG Gasfet preamp, it works very well. I'm currently using a rather strange setup. I have the shoulder strap portable IC202 and IC402 tranceivers using the D1010N amplifier and the ARR preamp. This makes a neat briefcase portable station that works well. The 202 and 402 cost me around $200 each on the used market. For a short while I had the expensive Kenwood 790A, but I was not happy with it's performance. I'm scouring the used market for a Icom 970 at the moment. This radio is incredible, but oh so expensive new.

Good antennas are critical to success with satellite operation. They needn't be mounted high since they will be looking up. They only need to clear the surface by a few feet when elevated to their maximum. The Cushcraft AOP package is the minimum system you should consider. One caution, SWR climbs and performance degrades badly on this setup when it is the least bit wet, even a heavy dew will effect it's performance. Much better are the KLM antennas. I use the 22C on 2 meters and the 40CX on 70 cm. These are circular polarized antennas which are best for satellite work. However, you can use linear polarized antennas like the Cushcraft long boomers with good results. I've used the 19 element Cushcraft boomers on 2 meters and the 24 element boomers on 70 cm with good success. Homemade antennas will serve also. Good designs can be found in the handbooks. I've used Byron Lindsey's helix antennas to good effect. I'm currently working on a folding portable antenna made from salvaged segments of TV antennas. My current goal is to have a manpack satellite station.

Here is a short list of suitable equipment.

Transverters:

SSB Electronics (Germany)
Microwave Modules (England)

The SSB Electronics transverters are super, but very expensive. The Microwave Modules units are servicable but hard to find. I've used both.

Transceivers:

Icom units, IC211, IC245, IC251, and IC275 on 2 meters and IC451 and IC475 on 70 cm. I've used all of these, any are suitable though the 275 and 475 are the best (and most expensive) choices. I have a personal affection for the IC211 when modified with the Mutek frontend board.

Kenwood units, 711 and 811. Neither has a very good receiver and both generate a lot of phase noise. Not recomended.

Multi-multi:

Icom 970. Absolutely the cat's meow. It does everything well and in an operator friendly fashion.

Kenwood 790A. Good main receiver, unfortunately you need to use the subband receiver for satellite and it doesn't offer narrow filtering. The transmit section is a problem. The modular final on 70 cm overheats badly and is prone to failure. Very operator unfriendly for satellite use. The fan is noisey.

Yaesu FT726 and the newer FT736. Good servicable radios. Not fancy, but very usable. The FT726 was the first designed for satellite radio. Either of these will serve you well.

Amplifiers:

By far and away the hands down favorite of satellite users is the Mirage D1010N amplifier.

Preamps:

I like the Advanced Receiver Research line, especially the ARR144VDG. Other good units are made by SSB Electronics and Henry Radio.

There, that should get you pointed in the right direction. I'd suggest you invest in a preamp and converter, or a preamp and 2 meter multimode rig first so you can listen in on the mode B activity and see if it is for you before setting up a complete station. With a good antenna, armchair copy is available to half the world for hours at a time using Oscar 13. With a poor antenna or preamp, you'll wonder if the satellite is working at all. If you don't get at least S5-S9 signals from the beacon and from the average station on the satellite, you've done something wrong.

>Most of these discussions revolve around actions that are obviously illegal.
>(Pins in coax, etc.)

Some creative vandalism may be the only workable solution to this particular problem. I know that it's illegal, but you guys put up his antennas, you may have to help bring them down.

>FACT: Personal effort required to obtain a license has decreased tremen-
>dously over the last decade.

This is NOT true on 75 meters and 20 meters where the problem seems worst. Most of the operators I've heard in the bands permitted to the lesser licensees have been either good or willing to learn. Many of the very worst jammers and troublemakers hold Extra class licenses.

>Ham radio is headed towards chaos. The FCC would probably like to see that,
>as it sure would allow them an easy answer as to what to do with our freq.
>allocations.

I believe that this is definitely wrong. The FCC has been terribly scarred by the CB mess. They created a monster that they can't control. At least when they tell hams to vacate a band, we still leave. The CB cancer has spread outside it's assigned limits and no amount of enforcement by the limited manpower of the Commission has been able to control it. The very last thing the FCC wants is for the ham bands to become uncontrollable like the CB band has become.

>What to do about all this is (IMHO) the most important issue facing amateur
>radio today.

What do you do with the neighboring sociopath except shoot him down like a dog? After friendly persuasion fails, and it will. You can hound him across the bands giving him a dose of his own medicine. You can picket his house late at night. You can send anonymous tips to the drug hotline. You can swear out a peace bond against him. You can file numerous TVI complaints with the FCC. Give his dog to the Humane Society. Burn dirty words in his lawn. Sow kudzu near his house. Sooner or later, he'll get the idea he's not welcome.

>When the AC goes on the blink, the Battery kick in.
>Any suggestions ??
>- Rich
>WB2JBS

You must use the diode. If the power to the PS fails, the battery will damage the regulator in the PS unless the diode is present. Nominal trickle charge voltage should be 13.8 volts at the battery terminals. For rapid and complete charging the voltage should be set to 14.8 volts, but cannot be allowed to remain that high after the battery reaches full charge or it will boil the battery dry.

>I've successfully used diodes (a pair, one polarized each way) from antenna terminal to ground. This positively limits the input signal to about .5 volts unless the input is so large that the diodes blow. Very simple and, at least for me, effective.
>Sarge

Sarge's solution is the classic answer, but the diodes will form a high level mixer and, in a high RF environment, will cause numerous mixing products to show up all over the spectrum. This isn't very neighborly. The preferred solution today is to use a PIN diode attenuator controlled by an AGC voltage. Suitable circuits are in the new Handbook.

My email response to you at "m21198@mwunix" did NOT make it for obvious
reasons (is YOUR poster giving out bad addresses?), so I'll post instead:

My first guess is that the problem may be caused by a too-low
float voltage. A FULLY-CHARGED lead-acid battery AFTER any
"surplus" charge has disappeared is about 13.8 volts (it's above
14 volts before the "surplus" disappears). 13.3 volts may be low
enough that it is not really charging at all!

Source record: 292222

ultnix.met.dec.com!taber (Patrick St. Joseph Teahan Taber, KC1TD) replies:

>In article <9110211808.AA23869@tecnet1.jcte.jcs.mil>,Mark Bitterlich writes
>an unquotably long lament about a ham he helped who later turned out to be a
>vandal and expresses regret that we cannot induct only the good into our ranks
>while excluding the unworthy. He ends by asking if it is possible to be a
>"good vandal" and turn hamdom from self-policing to self-executing.

Well I did ask for flames didn't I? :-) Patrick, just for the record, I never "expressed regret that we cannot only induct the good into our ranks while excluding the unworthy" although I agree that it would be real nice if that were true of anything. What I was trying to ask is how to deal with the unworthy when they present themselves up close and personal, and also maybe how to INSTILL and keep respect in the newcomers and how to regain it in the old.

As far as me asking if it was possible to "be a good vandal" and turn hamdom from self-policing to self-executing".... Patrick I merely said that some had suggested it, not that I was espousing it. Please flame what I wrote, and please quote what you flame. I do not think that it is fair (life usually isn't but... can't I ask?) that I have to defend myself against things that I never wrote.

However I do admit, and stand behind the INNUENDO (that was unwritten) that "self-policing" is a joke. Thus I can not turn "hamdom over from self-policing" since in my opinion, we have never had that to begin with other than in the eyes of the FCC's regulations. "Self-REPORTING" maybe.

Police: "1. Preventing and detecting crime, and ENFORCING the laws."

We do not enforce anything effectively because we do not really have any method that I am aware of to do so. The whole thrust of what I was writing was in effect a cry for help to figure out ways to do exactly that. Vigilante action is in effect one answer. If you have another method that allows "self-policing" to work, then please tell me. Not a plan... a proven method. I do not want to be a Vigilante, but I also do not want what I am hearing and seeing to continue.

>First, understand that looking for a fast, easy way out of the mess is
>the same impulse you depreciate so strongly in those who look for a fast,
>easy way IN to ham radio.

Absolutely true. However, when a man breaks into your home and is busy molesting your wife... you don't usually sit down to reason out a way to improve our prison system. :-)

>Second, keep in mind that the Nerd Net and its ilk predate no-code.
>That's not the problem. There have ALWAYS been bad operators. And just as a
>single bad step in a staircase will trip many people, a single bad operator
>will be a problem to many people.

You are absolutely correct. I have received many responses that infer that no-code is not the problem. I NEVER *NEVER* meant to imply that it WAS! However I obviously did since so many people have written, and I do apologize and retract any meaning to that effect or innuendo that was interpreted as such. I DIDN'T MEAN IT HONEST! :-) I was trying to say that that opposition to "no code" was to many their only way of showing opposition to "unruly behavior". Yes, that implies that no coders are "unruly", I can see that now... but what I MEANT was that people saw code as a means to show dedication towards a goal by exertion of hard effort. NOT that a ham that DID NOT know code was any worse than anyone else! I wish I had never mentioned "no code". SORRY!

>To get out of the mess and keep ham radio's reputation untarnished, you
>have to stay inside the law. That means you have to do hard, hard work
>and establish the guilt of the party in question and get remedy from
>official channels.

Patrick... it sounds good. How effective have you been in cleaning up 75 meters? Can you document one success? Please tell me about it.

>Doing less is becoming what you are supposedly defending against. You cannot
>make ham radio better by acting worse.

I find myself defending the vigilante type approach, and that is not what I want to do, nor do I espouse.. but the term: Fight fire with fire" also comes to mind. I will be more than willing to follow any detailed plan of action that you suggest. HOWEVER... I have ONE question before I start. If I do as you say, and it fails... if I try the ARRL, the FCC, or SUE the guy (as some have suggested), and ALL THAT FAILS... then what will be your suggestion? I need to know that before I follow your path.

>Self-policing doesn't mean we all wear badges and carry guns. The kind of
>policing we're talking about is the kind where the drill sargeant tells you
>to police up the area. We keep ourselves clean.

You brought a smile to my face.. not derisive or anything nasty.. just a smile. You see I just retired from the Marine Corps after 20 years. I remember the Drill Instructor (Sergeant) who in my youth ordered the young recruits to "police up the area". He did not carry a gun, nor a badge.

What he did carry with him was the sure and sudden confidence that any failure to accomplish his orders would be followed by a terribly violent attack upon our young bodies that we would have no defense against. We believed him..... especially after he demonstrated it once or twice.

Hot off the presses...

To enable FM transmit from 136-174, 410-470, do the following:

1. Remove the front panel.

2. Don't cut the green wire. If it is cut, splice it back.

3. Disconnect front panel unit cable.

4. Remove two screws in front panel back and remove rear cover.

5. Locate row of resistors next to Lithium Battery.

6. Remove R54 and R55 - clearly marked, the two nearest the battery.

7. Reassemble. No MPU reset necessary.

Note: Removing only R54 enables MARS/CAP only. Removing both
enables all.

The country files that come with the current version of "CT" have the call 3D2CR hard-coded as being "Conway Reef" as opposed to being a plain Fiji station.
I've got an old card from 3D2CR which is plainly marked "Fiji".
When did this distinction (if it is, in fact, real) occur?

I think what is necessary is to form a new organization of amateur radio operators that will replace the need for the FCC. We need a Federal board of hams and regional representatives (such as the FCC field offices). These hams would have the power to enforce all band rules and confiscate/damage/ destroy :) equipment as warranted. In the case of the NerdBat [no offense], his equipment should be confiscated and auctioned off. Everyone tries to do this in a civilized manner, but as we all know, Action talks and BS walks... (I know I modified it a little...) This guy is repeatedly ignoring polite requests to not be a disturbance to other operators. He should be given a fair amount of warning, and then we should show up and at least take all of his antennas and the tuner/SWR meter......That would keep him off for a while!

But I digress, perhaps due to vandalism inflicted upon myself. This vandalsim was not as a result of operating procedures on my part, but rather random violence enacted against me by a few of the local neighborhood "jerks". They removed by upside-down 20 meter V-dipole one evening as I was working.....

(But I wasn't too upset considering I burned one of them severely on the hand when he grasped the antenna as 100W of RF energy was coursing through it. :) :)

P.S. It was quite easy to tell who did it that Monday at school.....
(Hey, what happened to your hand? Did you go sticking your hand in the toaster again?? HAHAHAHAHAHAHHAHAHAHA)

Hence my "handle" of RF Burns....I know what they are like.......

I just acquired a used HyGain TH6DXX beam.

I have what appears to be one page (pages 7 & 8) from the manual.
Which does show the overall beam and all of the measurements
needed to assemble it together.

I was wondering if anyone had the entire manual that they could
copy and send me?

If so, please drop me an email message.

Thanks

>someone could post or e-mail a simple solution/circuit?
>Thanks...73...Herb K5HG

and a reply by Sarge, W0RIJ, suggesting a pair of shunt diodes across the receiver antenna terminals.

I've used the same technique with the shunt diodes myself with good results. It was a necessary technique when I operated on 75 meters and used different antennas for transmitting and receiving--my vertical works great for transmitting but has higher noise pickup on receive. My old Collins 75A1 receiver AGC got overloaded while transmitting due to the high dose of RF coming down the receive antenna and into the receiver, and the diodes cured this overload problem.
A caveat--diodes generate harmonics, and harmonics can cause TVI or interference to your neighbor hams. In this situation the diodes are driven with significant RF voltage, and are connected to an efficient antenna which can effectively radiate the harmonics . My cure for this was to insert an antenna tuning network between the diodes and the receiving antenna. This provided a measure of harmonic suppression, and kept my neighbors relatively quiet.
It may seem obvious, but don't leave the diodes in the line when transmitting, as with a transceiver, or you'll blow them up!
I was disappointed to discover that my newly-purchased TS-440S did not have provision for a separate receive antenna, but the noise blanker made the vertical usable for reception, so I no longer use the back-to-back diodes.

>email to me please use the path in my signature as my regular mail path is
>broken...

Wayne keeps bringing it up because he knows that there are still some hams
who are mad at ARRL about it. He never misses a chance to throw darts
at ARRL.

In the REALLY olden days, there were two classes of ham license, General
and Advanced. I forget the exact details, but entire bands were only
available to Advanced, including most phone privileges. By the time I
got into ham radio (1968) the Advanced license was gone, and they had
added the Novice and Technician license. The Extra class also existed,
but it was for "bragging rights" only -- the General license gave you
full privileges on all ham bands.

ARRL proposed a system similar to the old Advanced license where certain
phone bands would be available only to Advanced. FCC modified this idea
to carve up the phone and CW bands into the ghettos we have today.
(How many of us can, from memory, list ALL the various sub bands for
each class of license?)

Obviously, hams with General class licenses lost some frequencies if they
didn't upgrade. Some have never forgiven ARRL for this.

4134. TM-741: First Impressions

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-23 19:31:53 UTC
From: flloyd@L1-A.West.Sun.COM
Message-ID: <2343@west.West.Sun.COM>
Source record: 292186

TM-741: First Impressions

by Fred Lloyd, AA7BQ

Despite my better judgement, I up and sold my trustworthy TM-721 and took the plunge on Kenwood's latest offering, the TM-741. Although I've only had the radio for two days, I've been studying it for several weeks and have put together the following opinion about it.

I bought the basic radio, the CTCSS Decode option, the DTSS option and the short (4 Meter) control head extension kit. Cost was just over $900. Additonal band units for one of 10M, 6M, 1.25m and 23CM (that's 28, 50, 220 and 1296 MHz) run between $250 and $350 each. The supplied 440 unit may be removed and replaced with another band.

Control Features

The black on white (kind of orange, actually) display is very readable under all lighting conditions. I'm told that there is a black display with colored letters but it is only available in Japan, where it is the preferred type (I guess they are night people over there :-).

Kenwood finally woke up and smelled the coffee by illuminating the control buttons - albeit dimly and with very small letters (I'm slowly getting farsighted :-).

For as much as this radio does, it has surprisingly few buttons. Thats because most buttons have three functions, and some have more depending on the context in which they're used. Kenwood was wise to include a handy little quick reference card, which I presently depend on.

There is the ubiquitous F (function) button which gives many keys additional meaning. It is used in a variety of ways. For example, depending on the function you might press F, followed by another key, or hold F down for 1 second until the buttons begin to flash and then press another key, or hold F down and simultaneously press another key, or hold F down and another key down while turning on the power.

Some buttons are hidden. For example, to change transmit bands, you press in on the volume knob for that band. For those that have seen pictures of the rig, you'll recall that there are three multicolor reg/green LED's in a row above the volume knobs. These LED's are also buttons which are called Control Select buttons. When you press a Control Select key, the front panel controls now operate on the indicated band, while the selected band for transmit stays the same. I find this very handy since it means I can continue my QSO while fiddling with another band.

Scanning is available on both bands simultaneously and with a wide variety of options. You can scan through memory channels, groups of memory channels, the call channel, the last used VFO frequency, the last used memory channel. There are three or four ways to initiate scanning, and surprisingly, no SCAN button anywhere. In general, to begin scanning, you press and hold either a Control Select button, the VFO button, the MR button or the CALL button or one of the similar buttons on the microphone. Each method initiates a different type of scan. Scan resume may be either time operated or carrier operated.

I've not seen a mobile radio with as much memory before (except the 941, which I have not owned). There are 100 regular memory channels per band, plus a CALL channel. Any channel may hold an odd split (finally, Kenwood!), and the VFO band scan limits no longer use regular memory channels (finally, Kenwood!). I now enjoy having every repeater in the state programmed into my radio, and it is handy since I drive around the back country quite a bit.

One odd attribute about the main control knob is that when you change memory channels from, say, 55 to 1 where there are no channels programmed between 56 and 99, there is a slight delay. Presumably the mpu is doing something as it jumps across these unused channels. The delay gives rise to an odd feeling when you've only got a couple of memories programmed and the rest are all empty (and blanked out).

I wish there was a way to directly key in the memory channel number you wanted, because it can take several turns of the knob to traverse 40 or 50 channels. Although my DTSS module is still on backorder, the manual indicates that I can use it to directly enter the VFO frequencies with the microphone keys. I don't recall that it will allow you to direct key the memory channel numbers.

The radio also includes a time-of-day clock/calendar/stopwatch. I like the clock but I find the stopwatch particularly cumbersome to use and overall nothing more than a trivial toy. I had hoped that it could do something useful like time my transmissions (to beat the repeater's alligator) but no such luck. It's no more useful than the one on your digital watch. The clock does, however function to automatically turn the radio ON or OFF at predetermined times, and has a built-in timeout timer for the cross-band repeater function (or any other purpose).

Button beep volume is adjustable (in 8 steps) as is the display brightness (in 4 steps). In my rig, there is no discernible difference between brightness levels 1 and 2, but 3 and 4 are noticeably and progressively darker. My last late model Kenwood (a TM-241) did show a difference between brightness levels 1 and 2.

Speaking of beeps, the rig sometimes plays a stupid tune when I press the DTSS button. Maybe it's singing "La De Da, the DTSS isn't installed yet you dummy..." :-).

On the positive side, different functions have different beeps so you don't have to look at the display. For example, switching to UHF

transmit gives a high pitched beep, and switching to VHF gives a low one.

On The Air

A salesman warned me that the receivers were not as "tight" as the '721's and sure enough, there is a noticeable increase in around town intermod junk. Sometimes it gets pretty bad and I'm glad that I'm getting the CTCSS decoder to help prevent it. Overall sensitivity and sound quality is as good as any, and the micro-miniature built-in speaker does a remarkable job for it's size. Almost everyone will use an external speaker, however, since it improves the receiver volume tremendously.

There are three speaker jacks (or four is you buy an additional band unit). There's one at the rear of each band unit, and one near the front of the rig. The front jack (which I use) comes off the internal speaker and is a mixture of all bands.

I miss not being able to switch off the second band as easily as I did in the '721, which was a one-button (DUAL) press. On the '741, you must first press and hold the 'F' key until the buttons flash, and then punch the band switch you wish to disable (or enable). This takes much more time and thought, which I don't have a lot of when I'm busy driving in city traffic. It's quicker to just turn the volume down on the band you want rid of.

I also miss the single volume control that the 721 had. Now I have two knobs, plus a third which does nothing, to contend with. More cockpit confusion, however, it's manageable.

On air signal reports have ranged from "outstanding" to "sounds a little hollow" (probably some sour grapes there :-). Overall, transmit audio seems right up to par with the rest of the pack.

The radio has a fan which comes on whenever you transmit (at any power) and stays on for a few minutes afterward. It appears to be time operated instead of temperature operated as one might expect. At any rate, it's very quiet.

Accessories

A couple of nits to pick here. First, for a $750 radio, I expect CTCSS Decode and DTSS to be BUILT IN! Dammit, they can do it on a $500 handheld, why not on a top-of-the-line mobile!!! These two 'goodies' jacked the price up another $75. I consider them both essential. The DTSS gives you several things besides DTMF paging, such as a 10 number/15 digit autodialer and the ability to key in frequencies from the keypad. CTCSS is really a good idea when (if) you decide to use the cross-band repeat, and as mentioned above, to prevent intermod receive problems.

The front panel extension kits are OK, but are misrepresented by Kenwood. Firstly, the "short" kit is advertised as being 13 feet long - so I bought it. Come to find out, only the display cable is 13 feet long, the microphone extension is only 6 feet in length - so BEWARE. They're also very expensive. The "short" kit is about $45 and the long kit is around $70. Pretty expensive wire....

There is some good news in that the control head cable only contains 4 wires and could be easily extended by the user. The microphone cable is one of the 8 conductor telephone-type RJ45 or whatever and would be harder, but not impossible, to extend. But what's the point? You have to buy one of the kits to get the modesty panel that fits over the hole left by the display panel. At least ICOM for one, didn't have this requirement.

Installation

Oh boy, a remote head radio.... Sure. I've got a new vehicle and despite it's sport utility status (a Ford Explorer), you pay hell trying to find a place to mount anything in it. I finally ended up sacrificing some of the rear passenger's foot room by installing it under the rear of the front passenger's seat. I'm planning on placing a little mat over it to keep the rear seat passenger's feet off of it. Well, at least it can't be seen with the seat in it's usual (all the way back) position.

I mounted the control head, with it's handy little swivel mount, on the door of the slide out ashtray in the front dash (lucky I don't smoke). This has the neat side effect of being able to slide the control panel out and closer to my hand when driving. For the time being it's being held there by the double-sided velcro tape which came with the unit. When this fails, and I expect it to, I'll put a couple of small holes in the ashtray plastic to secure the mount. Oh well, ashtrays are replaceable...

Final Thoughts

Well, despite the rough edges outlined above, I am having fun which is the true measure of this hobby. I'm a good $900 poorer this week but I do think I have a radio which I'll grow to love. I really like the separated head installation, despite the effort it took to put it in. The memory and scan capabilities are nothing short of incredible and there are enough bells and whistles to keep me very busy for a while. I'll give it an overall thumbs up with an 8 rating on the 1 to 10 AA (amateurs anonymous) scale :-).

! Gary: Your comparison of IC735 vs IC725/FT747 is very interesting ...
!
! I'd be very interested in your opinion of the FT767GX.....and anyone
! else's opinion, too !!
!
! Jerry, K1MER
```

Jerry:

I've been using a '767 for about 5 years now. It's generally a fine rig, although quite a bit more pricey than the other models you mentioned. An overview of this rig shows lots of positive features, and a few gotchas:

1. Audio quality is clearly superior, if the folks on the other end of my QSO's are to be believed.
2. The rig is significantly lighter than the other top-end rigs (well, it once was their best), which makes it handy for mobiling/Field Day.
3. The power supply and antenna tuner are built-in, also handy if you are in movement mode.
4. Almost all features that show up as add-ons on competitive rigs are part of the standard package, which makes for a cheaper over-all purchase. This includes the filters, which are quite good.
5. It has plug-in modules for 6m, 2m and .75m (but I don't have any experience with these).
6. It's as forgiving as any solid state rig can be, but admittedly less so than my old Kenwood '820, a hybrid vacuum state box. The '767 has SCRAMMED once or twice when I gave it a >2:1 SWR, but it always came back to life without forcing me to resort to mysticism/service.
7. It's fun to use.

On the negative side:

1. The lithium battery died after a yr, and all the memories went away (1 yr is too short a time for this to happen). I've been told they have a mod for this that results in reasonable battery life, but I'm going to use dilithium crystals.
2. The antenna tuner is less-than-a-winner.
3. It only has 10 memories (not a problem for me, but could con-cievably be one for some folks). Alternatively, this might be a companion feature to limit the inconvience caused by problem #1.

Note that mine is an early model in the series; expect that some mods/tweaks/improvements have been made. Maybe some of the problems have gone away.

Hope this helps.

Whatever choice you make, enjoy it!

As a potential ham, my most memorable experiences with the amateur
community were when I listened in on some folks chasing down bad
operators four or five years ago. I believe that the technical
term is "self-policing".

The BOs were obviously drunk and somewhat obnoxious and appear to have
been doing technical violations as well. There's no question about
it; they were violating both the law and acceptable, decent behavior.

The "community" was after them like a pack of dogs. They chased them
from frequency to frequency, logging every detail and trying to
contact the FCC to get the ticket written immediately.

Some of my favorite folks are hams and I don't know a single ham who
is something other than wonderful. Still, those experiences were so
encouraging that I didn't even think again about getting involved
until recently.

Thanks for letting me know that nothing has changed.

I HAVE THE FOLLOWING CORRECTIONS TO FRED'S MODS FOR THE NEW KENWOOD TM-741A
MULTI BAND RADIO...

> Hot off the presses...
>
> to enable FM transmit from 136-174, 410-470, do the following:
>
> 1. Remove the front panel.
> 2. Don't cut the green wire. If it is cut, splice it back.
> 3. Disconnect front panel unit cable.
> 4. Remove two screws in front panel back and remove rear cover.
> 5. Locate row of resistors next to Lithium Battery.
> 6. Remove R54 and R55 - clearly marked, the two nearest the battery.
> 7. Reassemble. No MPU reset necessary.
>
> Note: Removing only R54 enables MARS/CAP only. Removing both
> enables all.

THIS IS NOT 100% CORRECT. ACCORDING TO THE MOD SHEETS I HAVE FROM KENWOOD, YOU
HAVE TO CUT THE GREEN WIRE AND REMOVE R54 FOR MARS/CAP MOD.

FOR THE DC-LIGHT MOD, YOU RESPLICE THE GREEN WIRE (IF CUT) AND REMOVE BOTH
R54 AND R55.

ONE SIDE NOTE, NO RESET IS NEEDED AS MENTIONED ABOVE, BUT IT DOES WIPE OUT THE
VALUES STORED IN THE VFO MEMORIES (AT LEAST ON THE RADIO'S MOD'ED AROUND HERE).

AS LONG AS WE'RE TALKING MODS...

FOR EXTENDED RECEIVE ONLY OTHER THAN THE 144 & 440 (WHICH ARE ALREADY EXTENDED)
YOU ONLY CUT THE GREEN WIRE. THIS GIVES YOU 10 METER COVERAGE FROM 18-54 MHZ,
6 METER COVERAGE FROM 40-90 MHZ, 220 COVERAGE FROM 215-260 MHZ AND 1.2 GHZ
COVERAGE FROM 1100-1400 MHZ. NOTE THAT THESE ONLY APPLY IF THE SPECIFIC MODULE
IS INSTALLED IN THE RADIO (I.E. 10 METER, 6 METER, 220 OR 1.2 GHZ)...

I don't know how things are up North, but here Amateur Radio exists,
"for the public interest, convenience, and necessity."

Events like walk-a-thons and bicycle races provide the opportunity for
us to get much needed PR. They also act as fun training events so that
in the case of a real emergency, people have the equipment and know-how
to set up and operate stations in less than optimum conditions. For
example, if you were to choose a site for a radio contest, you would
likely look for a convenient hilltop. In these sort of events, the
organizers might want the radio in the bottom of a ravine!

4144. Wanted: Attenuator plans, advice on projects

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-24 01:48:46 UTC
From: bruceo@isc-br.ISC-BR.COM
Message-ID: <3290@isc-br.ISC-BR.COM>
Source record: 292198

I am looking forward to starting a couple of winter
electronic projects (my first!).

I am interested in building a signal attenuator for
2 meter (50 ohm) to use for bunny hunting. If anyone
has plans for such a device or knows of a book that
has such plans, I would be very interested.

I've also been thinking about ordering a kit from Ramsey.
Specifically, their 2 meter power amp (PA-1 29.95 and
the TR switch TR-1 8.95). This would be my first
time soldering electronic components, so I don't want to
start with a very complicated project. Is this a reasonable
quality amp? Would this be a good starting project? Is
ramsey considered a reputable company? I'd like to know
what you think..

Thanks in advance..

I've never seen anything other than standard ICAO phonetics in ARRL
pubs. (At least since they abandoned the old US army phonetics
in the 1950's.)

>Second, Avoid becoming one of the "BAND COPS" that the hobby
>seems to attract. We have spent much more time than needed on
>this discussion.

Certainly there are far more important things to worry about than
the fine points of good operating procedure. On the other hand, it
IS annoying when you're trying to copy a weak signal, to have to
contend with non-standard phonetics in addition to the noise and
interferrence. It is just much easier to decipher a callsign when
there are only 26 possible phonetics to decide between.

To avoid problems with newer 'computer' controled cars you can ground the
radio on the far side of the car. For example, on a 1991 Toyota Corrolla
the dealer recommended not grounding the radios on the right side of the car.

He felt placing the antenna on the back of the car would not hurt any either.
NOTE: My car's mannual had a specific warning about two way radios.

4148. Yaesu FT-411E Mods

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-24 04:28:00 UTC
From: JPB7946%TNTECH.BITNET@cunyvm.cuny.edu
Message-ID: <01GC3Q5OAHHS90NAF2@TNTECH.BITNET>
Source record: 292163

Thanks to everyone who sent me their reviews of the 2m HTs. I have made my selection, and have decided on the Yaesu FT-411E.

Since I'm sure it is capable, I am wanting to modify the HT so that I can use it for MARS use. I prefer not to modify the radio to transmit outside amateur bands other than the MARS area (I have this nasty habit with Murphy's Law ... I would end up talking on the police freqs too frequenly).

If you have a mod to accomplish this, PLEASE send it to jpb7946@tntech.bitnet.

4149. GARMIN (Pronav) GPS 100 Nav Receiver and Data Cards.

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-24 05:19:24 UTC
From: trobertsj@cc.curtin.edu.au
Message-ID: <1991Oct24.131924.10232@cc.curtin.edu.au>
Source record: 292130
Cross-posted to: rec.radio.amateur.misc,rec.aviation

I am currently working on programs to transfer data to and from the GARMIN (or PRONAV) GPS 100 navigation receiver using the PC serial interface.

Does anyone have any information regarding the programming codes and procedures that this set uses? The format in which the co-ordinate data (latitude & longitude) is stored and transmitted appears to be encoded. Any clues as to what this format is?

Along the same lines, I am also seeking information regarding the data base cards or modules (eg. Jeppesen) used with this type of set and also some LORAN receivers. Eg. what type of device (EPROM, EEPROM, Static RAM etc???) is used in the card and what is the data storage format?

Any help, advice or pointers to suitable references would be greatly appreciated.

Thanks

>>one?
[misc deleted]

The incentive part was largely a crock for the entry levels. I entered
the hobby at this time as Novice. 1 or 2 years, nonrenewable, mostly
(entirely? its been a while) low bands. The incentive to tech was
rewarded with some phone priv's entirely Vhf and beyond, in a era with
little cw activity (where I lived anyway). Did wonders for people trying to
figure out what equipment to build/buy. The next leap to General was
a steep one codewise given those conditions. Various modifications along
way allowed some to keep their novice calls when you got a tech etc. QST
ran an interesting article a few issues back on this mutation (I really
can't call it evolution). But you can basically see that the FCC is
constantly tinkering with these entry steps w/o any good evidence of
progress.

I like the current codeless-tech (but HATE the name), but they went way
overboard with the spectrum allocated. It made a mobius loop out of a
staircase.

4151. MAJOR SOLAR FLARE ALERT - X-CLASS EVENT - 24 OCTOBER

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-24 08:21:28 UTC
From: oler@hg.uleth.CA
Message-ID: <00950930.D9BFE5C0.30746@hg.uleth.ca>
Source record: 292128

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 07:30 UT, 24 OCTOBER

/\

No Impact Expected

MAJOR ENERGETIC EVENT SUMMARY:

Flare Size: Class X2.1/2B Location: S13E56 (Region 6891)
Tenflare: None. Times: Begin=0231, Peak=0240, End=0255

Sweeps: No Type II or IV Sweeps Observed.

NOTES: This large x-ray flare was quite impulsive and almost entirely void
of radio data. No sweeps were observed; no tenflare was observed;
and very little 245 MHz activity was observed. However, a moderate
intensity SWF was produced by the strong x-ray flux.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

There is only approximately a 10 to 20% chance for a terrestrial impact
from this event. We do not anticipate anything. However, Region 6891 is
extremely volatile. It has a beta-delta magnetic structure and is very
large in size. It has produced three minor flares in addition to the major
flare over the last six hours (00:00 UT to 06:30 UT) and is expected to
continue to generate minor to major solar events over the next several days
at least.

At the present time, this region is not well situated for producing
terrestrial impacts. However, if it remains unstable, it could begin
producing terrestrial impacts later this week. This region is capable of
producing large, sustained major energetic events. Solar GIF images and
magnetic maps of this region are available. High-resolution x-ray plots of
major and/or minor events will also be made available for FTP.

>brians

This is the kind of question taht can trigger an unending
series. Nevertheless, I can't resist.

I was very active from ages 17 to about 30. Then I was QRT
for 35 years and just got back last December, so I am a kind
of "Rip Van Winkle". I observe a deterioration only to the
extent that there are too FEW new hams.

I have made about 1000 QSO's since my return, almost all on
CW (now also AMTOR). I am shocked to find that my age (67)
is about the median on CW. I don't think I have worked a
dozen hams under age 40. This is too bad. It seems to result
partly because (1) very few youngsters now are interested in
ham radio, and (2) those that are consider CW to be ancient,
of only historical interest. I won't even begin to present
the arguments for CW as a very, very satisfying mode of
communication.

I find QRM MUCH LESS of a problem than it used to be. There
are two reasons: (1) there are fewer hams on the air, and
more importantly (2) our receivers are light years ahead of
what they used to be so that we can easily filter out most
QRM that does exist (except in DX pileups - hi).

One final observation: the CW bands are full of old geezers
like me, many of whom decry the "bad language" that now
prevails on SSB. I have been told by several hams that they
no longer use SSB because the vocabulary in common use is
what used to be confined to men's locker rooms.

Well, I agree with the observation, but I had to come to terms
with that years ago when my children were growing up. They

are now nearly 40 and still use some of those same words in common talk - I don't see that it has caused their morals to degenerate any. And now pretty coeds use a vocabulary that curls my hair - but that reflects on me, not on them. As a kid I used to hear: "Sticks and stones may break my bones but words can never hurt me". I think that principle should govern our attitudes today - a continuing "generation gap" hurts only the old people, not the young ones.

In summary, I think the bands have not deteriorated at all. The contrary is the case. I only hope more youngsters will now find that out and join us.

>station.
>I've got an old card from 3D2CR which is plainly marked "Fiji".
>When did this distinction (if it is, in fact, real) occur?

3D2CR was the first callsign used on Conway Reef in 1989(?). Conway Reef was added to the ARRL DXCC list shortly thereafter. 3D2AM was another expedition. As far as I know, these are the only callsigns that have ever been used from Conway.

Yes, CT has some hard-coded callsigns, but you can change them if you want. It is necessary to prevent CT from ringing up new multipliers when all you've worked is another Fiji station. The best way to verify this is at the end of the contest, look at the <contest_file_name>.CTY file, and make sure all the entries 'feel' right (i.e. if you worked ZW0JR who you know to really be on an island just off the coast of Brazil, it might be counted as PY0F - this will have to be fixed in your copy of the CQWW.CTY file).

Hope this helps - Jim AD1C

Help,

I am going to buy a multi-mode controller in the extremely near future. I wand to use it for 2 meter packet and for HF RTTY, AMTOR and CW.

A friend has a brand new AEA that he wants to sell me, but our local authority says the Kantronics is a better product (and about $12 cheaper).

Any comments / suggestions would be greatly appreciated.

Thanks

73s de AC4HF

Hello,

I am interested in getting into QRP. Someone suggested the
TEN TEC Argosy-what features and what power is the rig (does
it do WARC bands?). What is an approximate price for a used
one.

Thanks

Two requests ...

I need the mods for a Kenwood tm-2530 (2meter mobile) for out of band operations. Its OK ... I'm a new CAP member.

I am considering the purchase of a AZDEN pcs-7000. Any first hand reports? How hard is the out-of-band mods? (They want $30 to do the mod to maintain the warrenty) Does the mod include surface mount component changes?

Thanks .... Steve KF5VH PP-ASEL

4161. re: How are the bands these days??

I'd had a novice ticket for 15 years and hadn't made a contact for
14 years. So I spent some time working on the code and last fall I
passed the general exam. After passing the general exam I went out
to buy a new hf transceiver...needless to say I had my eyes opened
as to how advanced they had become and also how expensive they had
become. I wasn't going to spend that kind of money on new rig not
knowing if I was even going to stay with it for very long, for I had
heard the stories about how bad the hf bands had become. I advertised
on the net here at work that I was looking for a used radio and ended
up buying a used Henry Radio Tempo One. Not a great radio but it
was in good shape and worked ok and only put me out $200.00 .
So I was back on the air again...and its great...it is true that there
are some times on 20 meters that you just want to pull the plug and
go watch tv. But for the most part people are very friendly and are
into ham radio for the same reason I am...its a hobby and its just
something they like to do. Most of the nasties that I have run across
on the bands are around a dx pileup some people will do anything and
say just about anything to make a contact with a "new one". I don't
let this bother me, I like to work dx as much as the next person
but if there is a large pileup I just tune on up the band and talk
to a JA or a VK calling CQ. If you buy a radio with the WARC bands
on them you will find that these bands are very uncrowded and lots
of fun to operate on. Ham radio on the hf bands is alive and well,
go buy a radio ...and I hope to hear you on 15 meters sometime.
Oh by the way last summer I traded my old Tempo One in on a brand new
Kenwood TS-850 I guess I going to stay with it for awhile.

> a month or so, then the battery seems to lose its ability to deliver current,

13.3 volts is just about right to maintain a battery at its current charge level but will not charge it up at all. 13.8 volts is about minumum for charging the battery and that will take 12 to 18 hours to reach a full charge. Once fully charged, the voltage should be reduced back to around 13.3 volts.

Car batteries are not designed to operate in a partially charged state and this one may well be ruined by this time. You should get a "deep discharge" or "Marine/RV" battery for this job. They cost a little more but will last a lot longer. The Sears "Die-Hard" version is highly regarded and sometimes on sale for as little as $69. The "Stowaway" brand is also around for that kind of price at many discount stores. This is a sealed battery which will not spill acid or give off explosive gasses when charging, but you must be VERY careful not to overcharge it (don't go over 13.8 volts).

You would be smart to get a good automatic battery charger of the type which will charge the battery properly and then drop back to a float voltage. The Schumacher 10 amp "Twin Rate" seems to do a good job and is available at many discount stores. It has a choice of 3 peak voltages, 13.8 volts for car batteries and sealed batteries, 14.4 volts for deep-discharge types, and 16 volts for equalization.

Battery charging is a complicated topic. If you want to know all the details, get the book "Living on 12 Volts" by Smead and Ishihara.

Good luck!

Mike

Hola Jose,

Mail order is the superiour way to buy, usualy. The W2A retails for 629,
I've seen it (and had a friend buy it) at HAMfests for $507. Mail order from
HRO and AES for $529, Discounted $10 from HRO, so I paid $519.

goodluck. The TH77A is comparable, maybe $10 les..

4164. incentive licensing

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-24 16:53:33 UTC
From: oo7@ut-emx.uucp
Message-ID: <60119@ut-emx.uucp>
Source record: 292157

m21198@mwunix (John McHarry) describes the incentive licensing system:

(much informative stuff deleted)

>Former holders of the class A license, who had been converted to General, were
>grandfathered to Advanced. I think this was political, since there were large
>numbers of them at the time. It is probably also the reason that Extra-only
>spectrum is rather inconsequential.

As a mainly-cw op, I would disagree with that final sentence. If you want to work DX on 40 and 80m, you are at a real disadvantage if you don't have access to the first 25 KHz of those bands, since that's where most of the juicy stuff hangs out. "Standard" dx frequencies are 7001-7005, 3505. Granted, you can probably make 5-band DXCC just in the General bands, but only with the same sort of effort that's needed to do it with 5 watts in the extra class bands. If you are General or Advanced class, and trying for something like 5-band DXCC or 5-band WAZ, or just want to use 40 and 80 to increase your country totals, upgrading to Extra class will be a bigger help than putting up a 3-element beam or buying an amplifier. It's also a lot cheaper!

I may well be deluding myself, but when I'm looking for new countries or zones on 40/80, I usually tune the first 25 KHz and then go back to the bottom of the band and start again. Agreed, it's less important on phone and it doesn't matter a bit if you are happy to talk to just anyone, but for even semi-serious DXing, having access to the Extra class sub-bands is pretty important.

The guy I sold my Kenwood TH-25AT to isn't happy with the way the scan works
He wants a "pause" type of scan which waits until the carrier drops out
instead of a "time delay" scan which resumes scanning after a few seconds.

Does anybody know of a mod to chande the scan mode from "delay" to "pause"?

Regarding the question of "new hams" and whether they have caused a deterioration of the HF bands ... I tend to find a lot more obnoxious behavior on 20m SSB, where operators need at least a general-class license, than on the novice portion of 10m.

But then I'm a "new ham" under the definition of an old-timer (first licensed in 1989), so perhaps I'm not an objective observor. ...

4171. Kenwood TS-530S

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-24 20:25:59 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9110241325.aa29073@PARIS.ICS.UCI.EDU>
Source record: 292166

Anyone out there with a Kenwood TS-530S (or TS-830S) that can give me some hints on the receiver performance? I just picked up a 530 very reasonable, and have to do the usual maintenance on it to perk it up and get it running the way I would like it to run.

My question:
Does the TS-530S / 830S suffer from more than the usual phase noise from the older PLL circuitry it uses? I have noticed that although the receiver works fine, it really is noisier than my Ten Tec Argonaut 509 receiver and the Ten Tec is better at pulling out the weak signals on the higher frequencies (but it is not because the signal appears stronger on the Ten Tec ... at least to my ear.)

Also:
Does the 530/830 have an unusually fast AGC in the "slow" position ? (This could be affecting my first question....) I find that the "slow" AGC position is not set to a comfortable time constant as far as my ear goes. I will probably look for a service manual and figure out the circuit and go change a component.

Does anyone have a TS-530S service manual they would be willing to part with (even temporarily?) I would be willing to pay for a copy. The rig looks intriguing, and I want to work with it.

Thanks

```
--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
October 25 to November 03, 1991

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008

Based In-Part from Data Supplied By
The Space Environment Services Center

---------

* SPECIAL NOTE *

Confidence levels associated with all forecasts in this report are
abnormally low due to the unknown influence solar Region 6891 may have on
terrestrial activity. This is a major active center capable of very
energetic and influential solar activity. It will cross the central meridian
on 28 October and depart the west limb near 04 November. Watch for future
major solar flare alerts for assessments of possible terrestrial impacts.

In addition, two new charts have been added to the weekly STFR report.
The first is a copy of the solar terrestrial forecast which is sent through
the packet radio networks and effectively summarizes the forecasts for solar
and geophysical activity. The second chart depicts the historical level of
geomagnetic activity over the last 60 days. It is based on the greater of
either the planetary or Boulder A-index values and may be found after the
10-day geomagnetic activity forecast.

```

CONFIDENCE LEVEL: 50%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

Chart Start Date: Day #237
NOTES:
This graph is determined by plotting the greater of either the planetary
A-index or the Boulder A-index. Graph lines are labelled according
to the severity of the activity which occurred on each day. The left-
hand column represents the associated A-Index for that day.
Q = Quiet, U = Unsettled, A = Active, M = Minor Storm,
J = Major Storm, and S = Severe Storm.

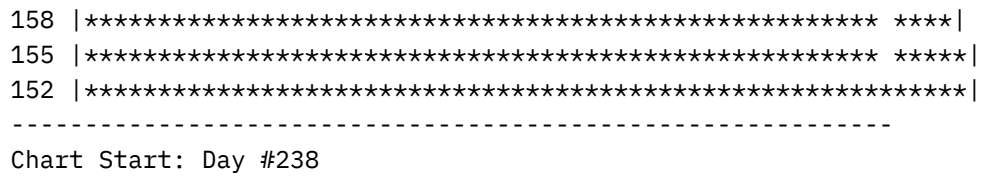
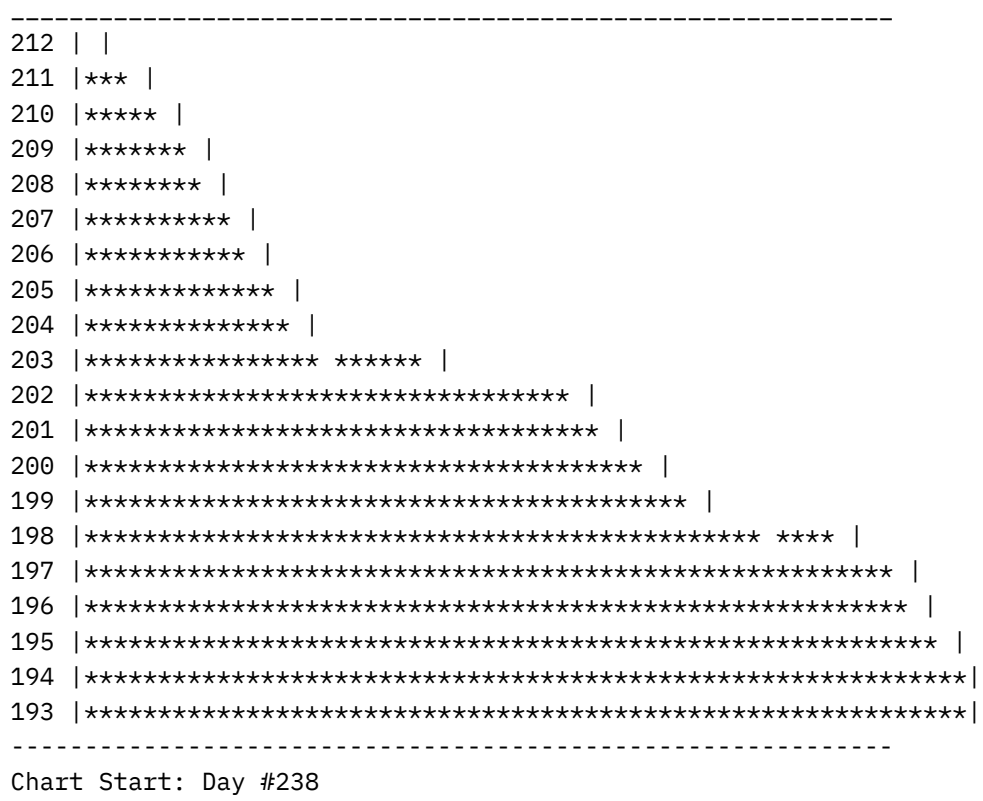


GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX



NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

NOTES:
These VHF DX prediction charts are defined for the 50 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts. For more information, request the document "Understanding Solar Terrestrial Reports" from: "Oler@Hg.Uleth.Ca" or "COler@Solar.Stanford.Edu". This document, as well as others and related data and forecasts exist on the STD BBS at: (403) 756-3008.

4175. Re: TM-741: First Impressions

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-24 21:37:11 UTC
From: brian@ucsd.Edu
Message-ID: <44662@ucsd.Edu>
Source record: 292142

You can, by the way, rip out the 2 meter band unit and replace it as well. Several people in my area have done that and now have 741s that operate on 220, 440, and 1200 MHz. It would also be possible to make a 10/6/2 model, if you wanted. And yes, you can put two 440 modules in it for duplex, if you want. All you have to do is feed the power into the middle module, no matter which one that is.

Kenwood apparently consider that moving the soldered-in power connection from the 2m module to whatever module you have in the middle to be beyond the capability of the average ham radio operator, and therefore they do not recommend removing the 2m module. I fear they may be right.

It would be wise to check the radio's frequency. Out of five of the earlier TM-941s (same modules) that I checked, ALL were off frequency on transmit, several by more than a kHz. One of them was 5 kHz off on 440, which really messed it up. I suspect that whoever Kenwood buy crystals from doesn't age them enough. (Note: if your test equipment doesn't go up to 1200 MHz, just measure at 600 Mhz. There's enough 1/2f power leaking out of the radio to measure it with a probe held near the unit. Remember to set the deviation to half as much too.)

By the way: if you like to switch your radio on and off with the ignition switch, but you want the radio's clock to continue to operate, you have to leave the radio power on. You can gimmick this up by adding a transistor switch to the control head that controls the power-on lead (same as the power switch does) whenever the car's ACC power is on.

Note also that the 741 and 941 draw power even when they are switched off: the processor in the radio unit continues to run, pinging the control head every half-second to see if it's alive. If you park your car for a week whilst you're out of town, you may run your battery down a bit.
- Brian

4176. Re: Dual-Band HT's prices

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-24 22:39:02 UTC
From: jta@kilroy.Jpl.Nasa.Gov
Message-ID: <1991Oct24.223902.13421@elroy.jpl.nasa.gov>
Source record: 292148

>In article <4445@mtecv2.mty.itesm.mx> ciqa@mtecv2.mty.itesm.mx (Centro de Investigacion en Quimica Aplicada) writes:
>>Hello, I would like to hear about Icoms and Kenwoods dual-band
>>HT's prices, preferably in any Texas city.

>Hola Jose,
>
>Mail order is the superiour way to buy, usualy. The W2A retails for 629,
>I've seen it (and had a friend buy it) at HAMfests for $507. Mail order from
>HRO and AES for $529, Discounted $10 from HRO, so I paid $519.
>
>goodluck. The TH77A is comparable, maybe $10 les..
>

And I got my W2A for $499.00 from C&A Roberts of Carson, California. The proprietor, Art Roberts (W6UPL) shows up at the monthly ham swap meet and sells his new Icom equipment there for good prices. Juns Electronics in Culver City quotes $519, and he does do mail order...

An editorial comment: the W2A has proven to be a very good radio for filling my needs. I would like the receiver to have better front-end filtering for intermod protection and overload, but it will have to do.

uh... don't worry about it (much). all recievers I have seen use two diodes in paralell to protect the first rf stage from too much rf.

4178. Re: How to treat new Hams (VERY LONG!)

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-25 00:02:58 UTC
From: allbery@NCoast.ORG
Message-ID: <1991Oct25.000258.12673@NCoast.ORG>
Source record: 292141

As quoted from <1991Oct23.205416.11829@CSD-NewsHost.Stanford.EDU> by andy@SAIL.Stanford.EDU (Andy Freeman):

```
+---------------
| >>THREE. I would argue for "start soft --- but they get ONE warning. Then the
| >>gloves come off." Playing the sn*tty sh*t from the very start won't make ham
| >>radio look very good; on the other hand, letting people know where the line
| >>is AND ENFORCING IT WHEN IT IS OVERSTEPPED will say a lot.
| >
| >Amen. A bad step on a staircase will trip many people, true, unless it is
| >fixed or removed and replaced.
|
| As a potential ham, my most memorable experiences with the amateur
| community were when I listened in on some folks chasing down bad
| operators four or five years ago. I believe that the technical
| term is "self-policing".
+---------------
```

Several mail messages, and now this. Obviously, I didn't say what I meant...

People, I do not mean vigilanteism. Nor do I condone such. The PROPER way to deal with such a situation is:

* Pin it down as much as possible: I am reasonably adept at direction finding, for example, so I can usually narrow it down pretty close.

* Once you've got something you can point to, contact the local Official Observer. They'll pin it down the rest of the way and do the rest of the work needed.

* THEY will call the FCC. It won't do any good for individual hams to call; the FCC doesn't have the manpower to deal with every complaint they get. But the OOs give them enough information to make it worth the FCC's limited time/manpower.

BTW: "self-policing" refers to the fact that hams traditionally behave properly in the first place. It is *literal* -self- policing: every ham is to police him/herself. It does NOT mean acting like a pack of wild dogs. Nor does it mean being a vigilante.

```
+---------------
| The "community" was after them like a pack of dogs. They chased them
| from frequency to frequency, logging every detail and trying to
| contact the FCC to get the ticket written immediately.
+---------------
```

Acting just like the offenders doesn't help anything --- it just makes us look worse.

Another I remember from my old EI days was EI7BA "Seven Bad Apples",
and if memory serves EI2FG "Two Fat Girls".

Someone suggested I use "Jilted Randy Male" (which was a bit too
close to the truth ;-), and I guess I could be truly Aussie and
use "Just Right, Mate!".

But to be a spoilsport about it, I tend to stick to the standard ITU
phonetics. Our local Dept of Transport & Communications gets miffed
if people drop the "VK2" from their calls while on voice...

MAJOR SOLAR FLARE ALERT

ISSUED: 04:00 UT, 25 OCTOBER

/\/\/\/\/\/\/\/\/\/\/\/\/\/\/\/\/\/\/\

No Impact Expected

MAJOR ENERGETIC EVENT SUMMARY:

Flare Size: Class M9.7/1N Location: S12E48 (Region 6891)
Tenflare: None. Times: Begin=24/2224, Peak=2241, End=2251

Sweeps: No Type II or IV Sweeps Observed.

NOTES: As occurred with yesterdays X2.1 flare, this major M9.7/1N flare
did not produce any particularly impressive radio bursts. Most of
the radio emissions were near the 100 sfu range. The only sweep was
a moderate type III sweep. No Type II or IV sweeps occurred.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

This major energetic event is not expected to have a terrestrial impact.
The major flares which have erupted from Region 6891 have so far been
associated with characteristics which are not generally very geoeffective.
The most impressive feature of these events has been the high x-ray flux
values which have been achieved. However, the two major flares which have
erupted from Region 6891 to date have been fairly impulsive flares.
Integrated flux values have not been abnormally high.

Region 6891 has been extremely productive and energetic over the last 48
hours. It has so far produced a plethora of minor M-class flares (one
approximately every two to five hours) in addition to the two major flares
observed. This region is very complex, very large and very volatile. Minor
and major solar flares are expected from this region. It has changed very
little in structure over the last 24 hours and should continue to be
unstable.

A Potential Satellite Proton Event Warning has been issued, and may be
followed within the next 24 to 48 hours by a potential PCA activity warning
should major energetic activity continue. Protons are not expected from this
most recent major event, but may be observed in future energetic activity
from Region 6891 as it continues to move toward the central meridian.

You are not alone. My 2005 has never picked up any 23cm signals. I just
got a Diamond D707 amplified antenna and some low loss coax but I have not
had a chance to try it out on the 2005 yet. The old RG58 is pretty lame
up that high. Any body have good reception above 1 Ghz on a PRO-200X?

4184. New Dual Band Radio Information

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-25 12:06:42 UTC
From: jay@zen.CAc.stratus.COM
Message-ID: <9110251206.AA00260@zen.cac.stratus.com>
Source record: 292129

A new Dual Band is forthcoming from Alinco Electronics. It will be called the DJ-580. I thought you would be interested in hearing about it before it comes out. The DJ-580 is 6" High, 2 1/2" Width and 1 1/2 Depth. The duck is 4 1/2" tall. The radio will do the following and is meant as a replacement to the top ended DJ-560.

The radio looks like this:

VHF UHF
1 2 3 A
4 5 6 B
7 8 9 C
* 0 # D

These are dual function keys in many cases. Here's how the keys are mapped.

1-shift A-pri/dial M
2-step B-GP dsq/dsqs
3-rev C-skip/m->v
4-tone D-mr/mw
5-po other keys are for scan/programmable scan
6-t.sql and call, lamp and battery saver
7-beep
8-tms
9-apo
*-fl/pl
0-dual
#-mess

It is designed to fit you hand perfectly. The keys are backlit and easy top press even if you have big fingers. It has extended receive on VHF and UHF.
When modified, it will receive airband and 800. My prototype didn't receive 800 though. You can scan on VHF while performing another scan on UHF. The backlight can be set to remain on. I'm sure you will have some questions beyond this so I hope this info has been enlightening.

Source record: 292155

In article <14570193@hpnmdla.sr.hp.com> alanb@hpnmdla.sr.hp.com (Alan Bloom) writes:
>
>ARRL proposed a system similar to the old Advanced license where certain
>phone bands would be available only to Advanced. FCC modified this idea
>to carve up the phone and CW bands into the ghettos we have today.
>(How many of us can, from memory, list ALL the various sub bands for
>each class of license?)
>
>Obviously, hams with General class licenses lost some frequencies if they
>didn't upgrade. Some have never forgiven ARRL for this.

And some of us likely never will. The ARRL's half-hearted support for
no-code doesn't make up for nearly twenty five years of stagnation and
the loss of virtually the entire ham industry caused by "incentive"
licensing. A system that demands faster CW proficiency to gain back
voice frequencies, feh.

Sorry, but I couldn't resist. This one event was the most damaging thing
ever to happen to ham radio and won't be soon forgotten by those who
went through it.

The ARRL Handbook for Radio Amateurs (1991) page 25-36.
"Low Power Step Attenuators"

In general, always look in the Handbook first.

>I've also been thinking about ordering a kit from Ramsey.
>Specifically, their 2 meter power amp (PA-1 29.95 and
>the TR switch TR-1 8.95). This would be my first

>ramsey considered a reputable company? I'd like to know
>what you think..

This is a simple little FM amp. It has no protection circuitry
and you can blow it up very easily, but it's a simple kit and
Ramsey is a good company. Just don't show it a high SWR or hook
the power up backwards or overdrive it and you'll be ok.

Do practice good VHF soldering technique before you start on the
kit. It's very important to get enough heat, but not too much,
to achieve good connections at VHF without burning out short
leaded components or delaminating the board. The only way to
learn is to do it.

>
>Are there any "old-timers" out there who could shed some light??

It's not nearly as bad as it was in the mid fifties with AM heterodynes
wall to wall up and down the bands, but it can get rough, especially when
the DXers go on a rampage. If you stay off 20 meters where the DXers play
their silly games, and you stay off 75 meters where the rednecks play, and
stay off 40 meters where Radio Moscow plays, you can find room for pleasant
conversations on 160 meters, 15 meters, and 10 meters. 30, 17, and 12 meters
offer some fairly peaceful fun as well.

Finding a quiet spot is harder than it was a few years ago, but it can be
done, and the new rigs reject adjacent channel interference much better
than those popular a few years ago. The CW segments are often nearly
vacant unless a contest is running, so you can hide out there without
too much hassle.

4191. Re: jeep fuel injection problems

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-25 14:41:11 UTC
From: tom@intran.UUCP
Message-ID: <433@intran.UUCP>
Source record: 292131

I have a jeep wrangler, I don't know if I can help exactly, but these are some thoughts I had while reading your post.

You didn't say if the trouble killed the motor at idle, or while on the hiway. If the motor is getting bogged down (lotsa amps going into big radio), the symptoms could be the alternator is putting too much load on the motor.

The computers are pretty imune to RF (i.e. the computers radiate lotsa RF, but don't receive much). There is a situation where the solenoids in the fuel injectors might have lllooonnnggg wires from the controller, that would tend to pick up your RF, and mess up the the drivers. That situation may require some form of RF shield on the wires, or a somple solution might be putting some .01uf caps from the switch side to ground at the injector location.

Just a couple ideas.

Tommy B,

4192. Re: Info Request: CATV/VHF/UHF TV freqs

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-25 16:48:28 UTC

Some of the letter CATV channels overlap bands which are used for other services in the radiated world. If memory serves me correct, channel G has a carrier at 145.25 MHz. In the ideal world this would be no problem, but some of the nearby cities, the cable TV signal leaks and creates problems for hams on 2 Meters. I remember the FCC man saying he would really like someone to give proof where this caused problems with a genuine emergency call!

I rarely operate SSB, so I can't comment on that, but the CW bands
are much more genteel than, say, 2 meter FM.

>paralell to protect the first rf stage from too much rf.

Depends on just how cheap the receiver is. I have a RS DX440 that I bought
for SWLing just before Desert Fiasco. It sits right next to my HF rig,
and before I was reminded of the diode trick here yesterday, I couldn't
run the 440 at all when transmitting. (not that I had much incentive to.)
Now it works fine.

(but hmm.. I think I'll check the 440s schematic when I get home, to see if
it's supposed to have the 2 diodes. They certainly weren't doing much if
they're there.)

> Any body have good reception above 1 Ghz on a PRO-200X?

I use an ICOM discone with my PRO-2005, and I haven't had any problems pulling in the local 23cm repeaters. The coax that came with the discone (I don't know what it is, but it's *not* RG-8 or RG-58) was terminated with an N conector, which I merrily chopped off and replaced with an ill-fitting BNC.

Re: LIDS

What to do ? It's important to start slow and build up the punishment level. The first step is informing the LID that certain behavior is not acceptable. The second step is public censure - this may not work if he has a group of clones. The third step is public harassment - yup, hound them across the bands - if your HF station is that close, you can really make his life miserable (and we would all thank you). If your HF station isn't that close, borrow something from a friend.

Some other technology fixes (besides varying PL) are to use beam antennas and power into the repeater for awhile.

I disagree that vigilantism is out of place. How can we self-police if we have no enforcement capability ? Since we don't, all we have left is vigilantism.

It is expedient to get a LID off the air by cutting their coax in the middle of the night. I'd put a tag with the word "LID" near the severed end, just to be sure he knows it wasn't just ordinary vandalism. If that fails, throw a rope around his antenna and drive away with it.

Technically, the bands are in great shape. The summer thunderstorms are subsiding, and 10 meters is open late into the evening. 20 is almost always open.

I'm a relative newcomer. The voice bands are somewhat more rugged, due to congestion and the ease at which people can speak. Seems that CW and RTTY are more polite because the operator has a chance to think before keying. hi hi.

75 and 20 meter voice is a real zoo. You'll need more than 100 watts to survive there. Technically, 160 needs power, too. I've found the Tech voice band on 10 meters to be crowded, but well-behaved.

My advice is to buy a cheap used rig at a swapfest and see what you find.

Re: LIDS

My previous response already got networked.

One other remedy is to contact an Official Observer. The OOs appreciate getting leads like this. If the LID can be caught in the act by the OO, the pink slip is in the mail. You can find your friendly local OO by contacting ARRL. Some of the local clubs may also know.

The FCC, with help from OOs, physically removed KV4FZ from 14.313, so the system has been shown to work on occasion.

4201. Kenwood TM-941A UNDOCUMENTED FEATURE

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-25 23:07:58 UTC
From: am001@cleveland.Freenet.Edu
Message-ID: <1991Oct25.230758.28294@usenet.ins.cwru.edu>
Source record: 292175

Documentation follows....

This modification is not really a modification, but an
undocumented feature that Kenwood Corporation has no record of.
This modification has not been completely tested, so those who
feel brave enough to try this out are welcome to it, but I am not
responsible for any ill-effects as a result of utilizing this
feature.

What this feature offers to the end-user is an extremely powerful
feature: doubling your memory capacity. With the Kenwood TM-941A,
the radio has ONE VFO, ONE CALL, and 100 memory positions that are
labelled 00 thru 99. This feature offers the user another
100 memory positions PER BAND!!!

How to perform this undocumented feature:

1. Have the radio turned on.
2. Press F and REV simultaneously.
3. Memory position A1 will show; this memory position cannot be
eliminated thru the MR/F function.
4. Work the VFO in a similar manner that you would with the
radio in normal mode.
5. When you save the memory position, take a look around at the
layout of these memory positions -- the memories are labelled
hexidecimally; that is, they are labelled AA thru A9,
B0 thru B9 until you have reached J9. J9 is the 100th
position in this alter memory area.
6. When you are finished, just press the F and the REV buttons
simultaneously, and you are back in the normal memory area.

As stated before, this feature has been found to be static in
nature; that is, when the power is turned off, the memory
positions are still retained and do not interfer with the
original memory area. Mind you, this memory feature has not
been completely tested, SO BE EXTRMELY CAREFUL! I ASSUME NO
LIABILITY FOR FINDING THIS FEATURE SINCE I AM DOING THIS AS A
BENEFIT TO AMATEUR RADIO!

BTW, Kenwood does not have any records and/or any comments
regarding this feature. I suspect that this feature is for
diagnostic purposes and should be treated as such.
Forewarned is forearmed!

Enjoy and 73! :-)

Hi folks!

I'm sending my best regards from the soviet space station MIR.
Today I finished my work and experiments here. I'm very happy that
so far everything was very successful. I had lots of experiments
to do, and without my friends here on board
(Sergeij, Anatoli, Toktar and Sascha) probably I wouldn't be so successful.

Thanks a lot to them. As a scientist I want to send a message to
all my colleagues that space-research is a wonderful field,
and a lab in space is just extraordinary. Anatoli, Toktar and I are going
to leave the station at night and tomorrow morning we will have our landing.

Thanks also to you and all the best!

Franz Viehboeck, Austrian Kosmonaut from MIR station.

9.Oct.1991,11.35

* MINI-TUTORIAL *
==========
Why do packet radio satellites use PSK modulation instead of AFSK
modulation as used by terrestrial packet operations?

It all started when experimenters began using surplus Bell-202 modems
for their early terminal node controllers (TNCs), since they were widely
available at the time. As packet operations began to spread, so did
AFSK for data modulation. RTTY operations on HF has used FSK for years.

Bell-202 signal demodulation is most often performed with a phase-locked
loop acting as an FM detector. The loop filter is made at least 1000 Hz
wide to keep the PLL locked with 1200 bit per second FM modulation.
The PLL error voltage is filtered and shaped through a Schmitt trigger
and then fed into the TNC data processing circuitry.

Using a PLL with such a wide bandwidth is an open invitation to noise
induced data errors. K9NG has shown that with a standard TNC-1 demodulator
and an FM signal strength that produces 20 dB of quieting, a 1200 baud
128 byte length packet has a bit error rate of 1.6x10^-2, which means that
2 packets will be received FOR EVERY BILLION SENT! A 20 dBQ FM signal
level is defined as useable voice sensitivity.

UoSat-2/OSCAR-11 uses phase-synchronous AFSK of a 300 mW FM carrier to
downlink ASCII and binary telemetry data to groundstations. UoSAT-2's
audio tones of 1200 Hz and 2400 Hz are locked in phase with the transmitted
data clock, making synchronous detection and correlation decoding possible,
greatly enhancing the bit error performance of its digital radio link over
that of a Bell-202 modem. Synchronous detection uses mixers instead of PLLs
for demodulation. Correlation decoding provides "matched filter" post
detection processing, which extracts the most information from signals
buried in the noise.

A still better modulation method is binary phase shift keying (BPSK).
BPSK was first used in the amateur satellite program by OSCAR-10 for its
400 bps digital beacon. BPSK is produced by modulating the transmitter
carrier by digital information in a balanced modulator. The result is a
double sideband suppressed carrier signal. If viewed on an oscilloscope,
the transmitted waveform will appear to shift in phase by 180 degrees
with the application of digital modulation. Not only is BPSK modulation
efficient, but so is its demodulation process, making it possible to
receive BPSK signals buried in the noise level. In fact, BPSK offers a
3 dB advantage over coherent CW (synchronous binary AM) modulation!

BPSK's bit error performance is MANY times greater than that of Bell-202
AFSK. Many deep-space probes use PSK for their data links to Earth because
the modulation is so robust. It was with these facts in mind, that pacsat
downlinks were designed around BPSK transmitters. Some pacsats also
shape their binary modulating waveform to resemble halves of sine waves
(raised cosine modulation) instead of square waves, reducing the transmitted
bandwidth and improving the downlink signal-to-noise ratio even further.

* FEEDBACK/INPUT WELCOMED *

I've passed the exam, so I should be getting my license in a few weeks.
I've decided that my first piece of gear will be a handheld transceiver in
the 2m band. Can anyone out there in netland suggest a good one?

For example, how about the Radio Shack HTX-202? Is it a good buy? The
price ($260) seems reasonable. Other brand 2m HTs seem to run $450 or so
depending upon features.

I appreciate any help you can offer!

>>we have never had that to begin with other than in the eyes of the FCC's
>>regulations. "Self-REPORTING" maybe.

>wyse!wyse.com!stevew@uunet.UU.NET (Steve KA6S) replies:

>This is simply not true.

[examples deleted]

Steve... it simply *IS* true. Look up the word "police" in your dictionary. You will see the word "enforcement" is used in the definition. I do not believe that the "OO's" have enforcement powers... they can suggest, and they can try to pressure, but they can NOT "enforce". Thus the term "self-policing" by its very definition can not be correct. When peer pressure and little slips of paper fail, their only recourse is to go to the FCC for enforcement action. They REPORT to the FCC. If the FCC feels like it, they will take action. Thus ham radio at best is "self-reporting" and is not "self-policing". My problem is that on several detailable occurrences, the FCC has failed to take action on documented violators.

They're pretty good on violating anyone even associated with sending info about "900" numbers via packet radio though... make no mistake about that. However they seem pretty powerless to put a stop to foul/profane and otherwise rude and obnoxious behavior on 75 meters. And since I believe that the FCC is ANYTHING but "powerless", the only conclusion that I am personally left with is that they CHOOSE not to take any action, as evidenced by what I hear every night... well at least the nights that I try to operate that band.

I still say the "OO's" are pretty powerless. I.E., they have no power, and I believe they (you) should. It seems the only answer.

4206. TS850S features and mod file (long)

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-26 03:36:01 UTC
From: wa2ise@cbnewsb.cb.att.com
Message-ID: <1991Oct26.033601.11100@cbfsb.att.com>
Source record: 292170

copied from packet:
This was a 4 article set that I merged into one long article. Talks about
various features and mods for this radio
begin article:

From: ka2raf@nn2z.nj.usa.na
To: 850mod@allbbs
Subject: TS850S mods 1

Having lived with Kenwood's TS-850S tranceiver for 5 days, here are some of my
observations:

. While the manual shows 35 power-on front panel adjustments, there
really are 36. Function number 35 is set from the factory to the
OFF state. Well, what exactly is this unknown function? Well
Bunkies, this enables the tranceiver to transmit on 27.500 through
28.000 mhz! Do yourself a favor, and set this option to ON for TX
inhibit! DO NOT JEAPORDIZE YOUR LICENSE! Why in the world did
the factory allow this??? Maybe they don't want the Chicken
Banders butchering up the rigs....

. Tone control. The setup only allows Burst or Continuous
modes, there is no way to turn it OFF, even though the manual
indicates there is a way.

. Quick memory function. You MUST pass through either the VFO A or
VFO B registers to program these.. You cannot go from standard
memory to quick memory directly.

. My 850S came out of the box running low power (50 - 75w PEP), so
I called the local ham radio dealer inquiring about service manual
availability. Well they had them in stock, but at a price of $50.00!
Unbelievable! Kenwood wants fifty dollars for (in the continuing
Kenwood tradition) a terribly organized, incomplete, and horrible
reading manual!!! Well, I dug into the schematics and opened up the
the radio, here's a list of items that might be of interest to some:

RF Board Controls

VR - RX BAL
VR - TX BIAS
VR - TX BAL
VR - TYP (50W output power adjust, used with S1 below)
VR - MIN (?????) / internal antenna tuner
VR - TUN (Tune mode power adjust)
VR - VSF (THIS IS THE 100W POWER OUTPUT CONTROL)

VR - SWR Protect activation
VR - PWM (Forward power meter calibration)
VR1 - RWM (Reflected power meter calibration)
VR1 - AL0 (ALC meter zero)
VR1 - ALM (ALC meter calibration)
VR1 - CPM (Processor meter calibration)
VR1 - ALG (ALC gain adjustment)

S - All Band Power Down Switch (Decreases power to 50 watts)

IF Board Controls

VR -
VR -
VR -
VR - Beep volume
VR - Sidetone volume
VR - Processor adjust
VR - ?????
VR8 & VR9 - ?????
VR1 - ?????
VR1 -
VR12 & VR13 - S Meter adjust
VR14 & VR15 - AGC adjust
VR1 - Notch filter adjust

. PLEASE NOTE!
Most of these controls are 1/8" pots, so if you intend to adjust
them use a VERY SMALL non-metallic tool.

. My 850S also came out of the box with the RIT/XIT control not dis-
playing 0.00 khz at fiducial (12 o'clock position) center.
Behind the front panel in the upper right corner is the control
for center adjust. It just needed a wee bit of tweaking...
Along with this control on the circuit board are the master adjust-
ments for the SSB slope tuning (High Cut and Low Cut).

. When both top and bottom covers are removed, on the left-hand side
is the FM board. There are 3 (three) pots on the board. They are
FM Wide (12khz) deviation, FM Narrow (6khz) deviation, and FM Mic
gain.

Author's note: I cannot say whether ALL the information above is accurate.
I do not purport to be an electronics wizard, but am just an
Amateur radio operator who wants to get the most enjoyment
out of his equipment

Let's beat the ridiculous cost of poorly written service manuals! Add to this
document and please circulate it!

73,
Jan - KC2CT

Subject: TS850S mods 2

More Observations As Of 6-26-91 - KC2CT

. FM mode defaults to WIDE (12khz). This is WAY too wide for accessing any 10m repeater. Hit the 455khz filter button again for FM-N (narrow). This will set the IF to 6khz width, and you be able to work FM 10m stations. Note: The 8.83 filters are NOT selectable in FM mode.

. Memory scrolling via M CH./VFO CH. You can bypass all unused channels if you press the 1 mhz button. With the button active, only stored memory channels will be displayed as the knob is rotated.

. Tuneable memories. Out of the box, the radio is set up for non-tuneable memories. Just bring up setup function xx on the display, and set it to ON, and ALL memories can be tuned via the VFO. When use the M.CH/VFO CH. switch you will be returned to the original frequency & mode setting in the memory.

. It may or may not be obvious to some, but the radio is capable of cross-band and/or cross-mode operation. Just pump the required modes and frequencies into memory channels or VFOs, and you're off and running. Hope you have a very broadbanded antenna!

. CW message storage is lost when you power off the radio. I didn't order the DRU-2 option (yet), so I don't know whether these messages will be saved. You'd think that with everything else that is stored in RAM and backed up by battery, that Kenwood would have made pro-visions to keep recorded messages alive also. A modification????

. When adding additional filters, is is necessary to set the corresponding switch on. Under the hatch on top, is a 4 position dip switch. The manual shows a picture of it, but makes no mention of their settings. This switch is necessary to inform the micro-processor of the filters' absence or presence. ON is for presence, OFF is for absence. Below is the switch diagram:

```
-----
| = | <-- YK-88C-1, YK-88CN-1, YK-88SN-1
| = | <-- YK-88CN-1, YK-88CN-1, YK-88SN-1
| = | <-- No Function
| = | <-- YG-455C-1 or YG-455CN-1
-----
O O
N F
F
```

Subject: TS850S mods 3

More Observations As Of 6-30-91 - KC2CT

Well here I am again with more stuff on the 850S...

. I received the DRU-2, voice recording unit this week, and installed it.Here's what I found:

. The unit comes with a lithium battery for backing up the voice messages when the rig is powered off.

. The initial state of the DRU-2 is:

Message 1 - 8 seconds
Message 2 - 8 seconds
Message 3 - 16 seconds

You can halve the sampling rate via front panel setup control xx. This will effectively DOUBLE the time of of each message, however, the quality of voice repro-duction will suffer because of the lower sampling rate.

. On playback of the messages, the microphone IS NOT disabled, so be quiet when you're transmitting stored messages.

. Use the MONI function to hear what you've recorded and/or are transmitting, and the MIC gain control to keep the ALC in range, as the DRU-2 drives the radio much harder than the microphone input.

. The high boost function and speech processor are available to the DRU-2 during transmit.

. I also got the VS-2 voice unit. The voice is the same as the older VS-1 for the TS-440, and TS-940, but the unit is in a smaller package. It will speak the frequency in either English or Japanese. There is a volume control pot on the bottom of the board which should be adjusted PRIOR to screwing down the VS-2. The output on my unit was very low, until I tweaked it up. Also there are jumpers on the board to speed up the voice playback... You'll need to consult the instruction page for the VS-1 for speeds, as there is nothing mentioned in the instructions for the VS-2.

. A note on output power of the rig. The radio uses 2SC2789's... These devices are rated as 100 watt devices Kenwood is running the finals VERY conservatively. When playing around with output, I had the rig dead-keying 175 watts, but backed it down to 100 watts, as I didn't want to blow up the rig, but I was definitely smiling as the Birds' meter swung with a 250 watt slug!

. The ROM chip on the digital board is socketed. Kenwood had problems with early 440's and 940's with poor soldered connections. While it's a nice idea to allow removal and replacement of the ROM to add features/fix bugs, this might become a problem area in the future.

. Hidden function!!! If you turn on the radio while holding down
the VOICE button, EVERY button on the radio will acknowledge its
function via morse code! This is a terrific feature for sightless
hams! I can't understand why it is not mentioned in the owners
manual or marketing literature!

Subject: TS850S mods 4

Still MORE Observations - KC2CT - 07-05-91

Well if you've been following this brief series, you probably
know by now, that despite any criticism, I really LOVE my 850S!
I've really dug into the guts of the radio, and truly find it
a pleasure to explore and operate..Well here's a few other
items that should be of interest to other hams:

. ALL BAND TRANSMIT

Kenwood markets this radio worldwide, and has made provisions
to allow the radio to transmit between 1.625 mhz and 29.999 mhz.
I am providing this modification for INFORMATIONAL PURPOSES ONLY!
DO NOT TRANSMIT OUT OF BAND, THIS WILL JEAPORDIZE YOUR LICENSE,
AND HAVE THE FCC, AND/OR INTERNATIONAL AUTHORITIES KNOCKING AT
YOUR DOOR!!!

The All-band transmit modification requires the removal and re-
location of a diode on the the digital board which is located
behind the front panel. The US version of the radio has diode
D11 installed, and diode D9 removed. D11 must be removed, and
installed in the D9 position. This modification IS NOT for the
faint of heart, as it entails removing the front panel, and the
digital board. Note that the digital board has solder holes that
are through-soldered; that is, there are circuit traces on both
sides of the board, so make sure that ALL solder is removed from
the holes. This modification will also allow the antenna tuner
to tune anywhere the receiver is tuned. This modification should
ONLY be performed by those familiar with soldering and de-soldering
techniques, and requires patience, and dexterity.

. Broadcast Band Sensitivity

BCB sensitivity REALLY suffers as a 24db attenuator is inserted
when band-switched. This attenuator circuit is very similiar to
the TS-430/440. Possible modification?

. Additional Front Panel Functions

Pressing SCAN + TX-M.CH will set the radio into its extended
function mode. These options can be scrolled via the M.CH/VFO CH.
switch. The following are the extended functions:

00 - This is the ROM Checksum displayed as a 4-digit hexadecimal
number This cannot be changed.

01 - Allow filter selection in transmit. Initially set OFF.

02 - Antenna tuner power down. Initially set to OFF.

03 - Antenna tuner non-stop mode. When set to on, the antenna tuner will not stop when the lowest VSWR is found. Initially set to OFF.

04 - Store mode, and filter settings prior to changing bands, or channels. Initially set to ON.

05 - Display -HELLO- on digitial display, and send it in Morse code on power up. Initially set OFF.

06 - Turn full LCD display ON on power on. Initially set OFF.

07 - Turn Subtone ON or OFF. Initially set ON. Note that even when set off, the TONE indicator will be lit on the display.

08 - Unknown. Initially set OFF.

Note: I haven't tried or verified any of this, proceed at your own risk. And do not transmit outside of legal bands. WA2ISE

4207. Daily Solar Geophysical Data Broadcast for 25 October

]>didn't upgrade. Some have never forgiven ARRL for this.
]
]And some of us likely never will. The ARRL's half-hearted support for

IMHO this is a pretty unconstuctive attitude. The people who make that
policy (and caused me to drop out of ARRL for 10 years) are long gone.
ARRL is not the same organization it was in the sixties! If you don't
like ARRL, get involved and change it. It's all we have to represent
our interests.

It's too bad Wayne Greene brought up this dead issue again. Wayne Greene
likes to do two things:
-put down the ARRL
-puff up his own ego.

When it comes to making money, I take Wayne Greene seriously. When it comes
to his opinions - I think he is a jerk!

In article <9110260146.AA15745@tecnet1.jcte.jcs.mil> mgb@tecnet1.jcte.jcs.mil writes:
]Steve... it simply *IS* true. Look up the word "police" in your dictionary.
]You will see the word "enforcement" is used in the definition. I do not
]believe that the "OO's" have enforcement powers... they can suggest, and
]they can try to pressure, but they can NOT "enforce". Thus the term "self-
This is true. However, the FCC offices are under instructions from Washington
to issue NOV's based solely on OO gathered evidence (if it is done right).

]policing" by its very definition can not be correct. When peer pressure
]and little slips of paper fail, their only recourse is to go to the FCC for
]enforcement action. They REPORT to the FCC. If the FCC feels like it, they
]will take action. Thus ham radio at best is "self-reporting" and is not
]"self-policing". My problem is that on several detailable occurrences, the
]FCC has failed to take action on documented violators.

If the FCC really does fail to act on genuine problems, there ARE other
alternatives. OO's such as myself cannot get involved with them, but I will
point out that there is a long tradition of pinning coax, etc. However, this
sort of action is lawless and should not be taken lightly. Many hams are
overly sensitive to what they perceive as improper operation.

]They're pretty good on violating anyone even associated with sending info
]about "900" numbers via packet radio though... make no mistake about that.
]However they seem pretty powerless to put a stop to foul/profane and other-
]wise rude and obnoxious behavior on 75 meters. And since I believe that
]the FCC is ANYTHING but "powerless", the only conclusion that I am personally
]left with is that they CHOOSE not to take any action, as evidenced by what
]I hear every night... well at least the nights that I try to operate that
]band.

Well... it is not legal for the FCC to stop rude, obnoxious or foul behavior.
There is no law or regulation against it (although jailhouse lawyers could
claim the "good amateur practice" rule applies). The FCC has been pushed
out of "content" regulation by the courts (1st amendment rulings). They
are left with enforcing frequency allocation rules (which is how they
went after the 900 number message), malicious interference, and technical
violations.

I would suggest that the following actions are all you can do about
"obnoxious" behavior:

(1) try to use peer pressure. I know that there is a breed of slime out
there on whom this has no effect.
(2) ignore the problem

(3) attempt to frighten off the offender. He may not be aware of how
little enforcement power is out there. He may be led to imagine
that there are DF teams on every street corner.
(3) if it cannot be ignored, see if it constitutes malicious interference.
This means that it must: (a) cause interference, and (b) have malicious
intent. Causing interference means actual RF interference, NOT
breaking into conversations or monopolizing a net. Furthermore,
in this context, interference means that you are transmitting on a
frequency, and they SUBSEQUENTLY key up and interfere with you.
If it is malicious interference, and it occurs frequently, the odds
are good that the FCC will prosecute (after the OO's do the groundwork).
(4) Look for other violations. Operating without a license, or without
ID and usually easy to get prosecution on. Broadcasting or using
too much power may be prosecutable. Use of foul language is VERY
hard to prosecute and probably not worth your time (although I had
our local US Attorney tell me that he would be willing to prosecute
on it - but that was 5 or 6 years ago).
(5) Consider political action. In one particularly egregious case, before
we were getting good FCC cooperation, we used petitions and affidavits
mailed to our senator.
(6) Consider legal action. If the turkey is interfering with a repeater,
have the repeater owner legally notify the turkey that he cannot use
that equipment. Then, go after him for using your property after
having been warned off. Get an injunction against him for harrassment.
Sue him for mental anguish or some other bogus thing (this assumes that
you have free legal help - not uncommon in large ham organizations).
(7) Consider harrassment. There are legal things you can do to make his
life less pleasant.

Before taking any hasty action, however, consider our experiences: most of our
worst cases have ended up in jail on non-ham-radio offenses, and thus have
been removed from our bands. A lot of these turkeys have no respect for
society or law, and thus tend to get arrested for other offenses.

Also consider that with our current legal system, legal action and
harrassment can backfire - ask those involved in the old WESTCARS suit
about that :-(

Finally, ask IS IT WORTH IT? It may be that these people can be ignored
with no real problem. Too many times we get our sensibilities up, and
end up in a real rage, when the individuals are not really engaged in
serious violations. Put things in perspective: is the individual guilty
of a crime as serious as vandalism? burglary? assault? murder? How much
effort should society put into calming our overly sensitive emotions?

I get many calls that go like: "These guys are down there on 75 meters
talking bad about [blacks,jews,arabs,russians,women,has]. You should
do something about this!." There are no rules that I know of that
prohibit expressing your political opinion on the air - no matter how
crude and offensive it might be.

...or...

"There's this drunk on 20 who is using bad language." Again, not much you can do about it unless he has a pattern of causing malicious interference.

Let me outline some successes we have had:

Hot air balloonists were using 220 to talk (unlicensed) to chase vehicles - often in commercial operation. We led the FCC to the offending balloons and they issued $750 fines.

A fellow was causing malicious interference to 20 meter nets, local 10 and 2 meter simplex, and 2 meter repeaters. After finding the individual, and carefully documenting the case, the FCC verified our observations and fined hum $750.

An individual was jamming our two meter nets from a high powered mobile. We tracked him down and scared him to death (nothing like having a 250 pound truck driver pounding on the door of your house trailer at midnight and demanding to discuss your ham radio operations). We never heard from him again.

Hi,
The Delta Amateur Radio Club here in Memphis is planning to put up a
Digital Packet Repeater. If anybody has any Info On Digital Repeater's or has
built one Please send me a e-mail message. I would like to talk to you further
about it.

Thanks in Advance.

4212. How are things on the bands??

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-26 20:09:50 UTC
From: dube@cpdvax.CSc.ti.COM
Message-ID: <199110262009.AA13257@tilde.csc.ti.com>
Source record: 292091

Subj: How are things on the bands these days??

I started in the Ham hobby in 1955 (or was it 1954?). I was off the air from 1955 until 1989, and to me, the "bands" do seem to have deteriorated. I hear a lot more rudeness, foul language, and general discourteousness now than I remember there being before. I'm not sure I want to pinpoint any one band or any one group, since it seems to me to be a much more general thing.

However, the CW operations seem not to have deteriorated nearly as much as the phone band operations. Who knows why this is? Everyone seems to have a different opinion; but I'm reminded that it takes a lot more thought to send a word or phrase in Morse than it does to blab it into a mike. Maybe it's the patience factor? Besides, I sometimes think some off the ops are blind drunk when they engage in rude, vulgar or obnoxious behavior on the air, and they probably couldn't manipulate a key under those conditions.

Regardless, I have enjoyed my contacts in the past couple of years, both on and off the air. It's still a great hobby, with a lot to offer a broad range of interests. If I don't like the language or conduct of a particular station, I just ignore it and work someone else--- there are plenty of clean ones.

73,
Dube AB5AP

4213. Transverter output for TS-440 ?

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-26 21:12:42 UTC
From: stu@Tandem.com
Message-ID: <1991Oct26.211242.22911@tandem.com>
Source record: 292087

Has anyone successfully mod'ed a Kenwood TS-440 so it can drive a
VHF transverter ? I need somewhere between 200 uW and 100 mW (anywhere
in between is ok) to drive a 50 MHz transverter.

Thanks !
Stu N6TTO

4214. RTTY DX Notes for week ending October 25, 1991

SB DX @ ALLBBS $KT7H298
RTTY DX Notes 1of3 10/25/91
RTTY DX Notes for week ending October 25, 1991
BID: KT7H298
Part 1 of 3.

Dame rumor has it that cards for the Albanian operation have started
to appear. If this is so, it would indicate that those who were
involved with the organization, both on the air and in the card
department are all first class people, and they should be
congratulated on their efforts. It is just a pity that other
DXpeditions could not follow the same brisk line of QSLing.
Personally I have cards outstanding from March last year, and one
group who have not, as yet, sent out their cards, are asking for
donations for their next trip. Some people have all the cheek.

Our thanks this week go to DJ3IW and the DB0SPC Central Europe DX
Cluster, IK5AAX, I5FLN, JA1BLV, OD5NG, TG9VT, UT5RP, VK2BQS, VK2EG,
WB2CJL, W2FG and the Tri-State Packet DX Cluster Network, W2JGR and
the Twin-City DX Packet Cluster and K2FJ. Thank you all for your
information. I do wish at times that I could use all the news and
information supplied by those above, but it would run into about two
hours of notes. I think that is a little much for most people. But
keep it up chaps, at least i appreciate it.

QSL INFORMATION

UC2SF is at Box 4, Bobrujsk, 213827 USSR.

HI8BX says that Box 115, Santo Domingo, Rep of Dominicana is his QSL address.

UA1OJ collects from Box 27, Severodvinsk, 164500 USSR.

HS0ZAA cards go via KM1R.

CU3LF collects from KB3GG.

RC2CQ/UA0I QSLS go to Box 1145, Mogadan, 685030 USSR.

Continued in part 3.
/EX
SB DX @ ALLBBS $KT7H300
RTTY DX Notes 3of3 10/25/91
RTTY DX Notes for week ending October 25, 1991
BID: KT7H300
Part 3 of 3.

VP25EE cards go via KA3DBN.

8P9HR requests via K4BAI.

UG7GWY requests all his cards CW/SSB/RTTY etc go via UT5RP, and that means all cards for operations past, present and future.

UT5RP requests that anyone who worked YA0RR and has not as yet sent a card, to do so immediately to Dima at Box 300, Odessa, 270000 Ukraine.

Notes of Interest

Cyprus and Turkoman will be activated by a Bavarian group for the CQWW Phone Contest, but they will operate RTTY before and after the contest. They will use their home calls /5B4 or /RH2. QSLs go to their home calls.

I5FLN reports that John, XQ0X will remain on San Felix for about five months.

Bangaladesh. Jim and Kirsti (VK9NS) expect to go to Bangaladesh in the near future with the calls of S21ZA and S21ZB. They will take

beams and RTTY gear with them. Also, two locals have been issued with calls of S21A and S21B, so maybe activity will continue after Jim has departed.

HS0ZAA, John, spends a lot of time on CW but will appear on RTTY at least twice a week, maybe with the club call of HS0AC.

VP25EE is a special call for 25 years seperation from the 'old' country.

9K2KA will QSY to HB9 for about five months.

Clipperton Island may appear soon. No dates or modes information available at this time.

South Sandwich Islands are scheduled for March,1992. RTTY is a definite possibility.

4217. Kenwood TM-941A UNDOCUMENTED FEATURE

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-26 23:36:00 UTC
From: am001@cleveland.Freenet.Edu
Message-ID: <1991Oct26.233600.8799@usenet.ins.cwru.edu>
Source record: 292099

Documentation follows....

This modification is not really a modification, but an
undocumented feature that Kenwood Corporation has no record of.
This modification has not been completely tested, so those who
feel brave enough to try this out are welcome to it, but I am not
responsible for any ill-effects as a result of utilizing this
feature.

What this feature offers to the end-user is an extremely powerful
feature: doubling your memory capacity. With the Kenwood TM-941A,
the radio has ONE VFO, ONE CALL, and 100 memory positions that are
labelled 00 thru 99. This feature offers the user another
100 memory positions PER BAND!!!

How to perform this undocumented feature:

1. Have the radio turned on.
2. Press F and REV simultaneously.
3. Memory position A1 will show; this memory position cannot be
eliminated thru the MR/F function.
4. Work the VFO in a similar manner that you would with the
radio in normal mode.
5. When you save the memory position, take a look around at the
layout of these memory positions -- the memories are labelled
hexidecimally; that is, they are labelled AA thru A9,
B0 thru B9 until you have reached J9. J9 is the 100th
position in this alter memory area.
6. When you are finished, just press the F and the REV buttons
simultaneously, and you are back in the normal memory area.

As stated before, this feature has been found to be static in
nature; that is, when the power is turned off, the memory
positions are still retained and do not interfer with the
original memory area. Mind you, this memory feature has not
been completely tested, SO BE EXTRMELY CAREFUL! I ASSUME NO
LIABILITY FOR FINDING THIS FEATURE SINCE I AM DOING THIS AS A
BENEFIT TO AMATEUR RADIO!

BTW, Kenwood does not have any records and/or any comments
regarding this feature. I suspect that this feature is for
diagnostic purposes and should be treated as such.
Forewarned is forearmed!

Enjoy and 73! :-)

|> up that high. Any body have good reception above 1 Ghz on a PRO-200X?

I can pick up most of the 23 cm repeaters just using the supplied antenna.
However... If I really want to hear I use my dis-cone antenna in the attic, with about 50 feet of RG-8.

Works pretty good...

If I really wanted to do it right I would run Belden 9913 and put the antenna outside...
But I already have too many antennas outside :-(

DE KJ6NN
Phil

P.S.
If you want a test signal and you life in the South Bay area then tune to 1286.0 (My repeater) I am sure that you will be able to hear it! :-)

4219. MAJOR SOLAR FLARE ALERT - X-CLASS - IMPACT EXPECTED

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-27 02:15:34 UTC
From: oler@hg.uleth.CA
Message-ID: <00950B59.38EDEF40.3234@hg.uleth.ca>
Source record: 292101

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 24:00 UT, 26 OCTOBER

/\

MODERATE TO HIGH IMPACT EXPECTED
PROTONS EXPECTED NEAR 04:00 UT

MAJOR ENERGETIC EVENT SUMMARY:

Flare Size: Class X1.6/2B
Location: S11E20 (Region 6891)
Tenflare: 1,200 sfu at 20:30UT. Duration: 34 Minutes
Times: Begin=1846 UT, Peak=2047 UT, End=2243 UT

Sweeps: Moderate Type II (Importance 2) at 20:49 UT
Moderate Type IV (Importance 2) at 20:52 UT

WARNING: Protons at greater than 10 MeV may arrive near 04:00 UT. A warning for protons possibly reaching or exceeding the 200 pfu level at greater than 10 MeV has been issued. Also, PCA activity is expected to accompany this event. Polar and high latitude regions should be aware of this moderate to high threat for significant radio signal propagation degradation.

NOTES: A precursor class M1.4 x-ray flare was observed from Region 6891 several hours prior to this major X-class event. The precursor maintained an x-ray output above the M-class level for most of the period before the main x-ray burst of the X-class event began. This was a very long duration event, overall. The main X-class burst was also a long-decay event (LDE). A strong SID/SWF was observed in tandem with this major energetic flare affecting frequencies as high as 20 MHz.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

This major flare is expected to have a moderate to high terrestrial impact. There is a high probability that protons were ejected from this flare. Protons could arrive in the near-Earth space environment near or after 04:00 UT on 27 October. Associated PCA activity could produce near blackout radio conditions over the high and polar latitude regions early in the UT day of 27 October, lasting through 28 October.

A minor to major geomagnetic storm is expected late in the UT day of 28 October or in the early part of 29 October. A specific impact assessment

for the geomagnetic field will be followed later this UT day in a Potential Geomagnetic Storm Warning. Consult that warning later this UT day for specifics regarding potential activity levels.

An auroral storm is expected to develop several hours after the interplanetary disturbance arrives late in the UT day of 28 October or in the early part of 29 October. The moon is now rising progressively later after evening twilight and should therefore provide only a low to moderate level of interference during this disturbance period. A Low Latitude Auroral Activity Watch or Warning may be issued later this UT day. Consult future warnings for additional details.

There is a risk for possible significant levels of HF signal propagation degradation, particularly over the polar and high latitude regions. The effects of the storming could cause moderate degradation of low and middle latitude signals as well. More specific forecasts regarding HF propagation conditions will accompany the Potential Geomagnetic Storm Warning, which will be issued later this UT day. Consult that warning for more information.

4220. Alinco DJ-560T

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-27 03:08:49 UTC
From: UD173191@NDSUVM1.BITNET
Message-ID: <91299.220849UD173191@NDSUVM1.BITNET>
Source record: 292088

Hello, everyone...

I've been thinking lately of getting the Alinco DJ-560T, and I have
a few questions for those that own/sell/use/etc. them. The best price
I've found so far is $365 from Radio Buffs in Florida. This includes
the mod already done and shipping cost. They say that the mod does not
affect the warranty.
Questions: Is this a good price?
Is this a reputable dealer?
How well does YOUR 560 work/what are your opinions?
What are the EXACT TX/RX freq's after the mods?
Can I get the air band?
Dealer sez it'll get cellular, how well?
Any other comments?

Thanx!

For those of you who didn't catch the latest edition of "Crossband" on WWCR, there was mention of Newsline and its ongoing shortage of operating funds. They will probably go QRT by the end of the month unless they raise enough money to pay their $1K+ phone bills and other expenses. For more information about Newsline, and the address for contributions, here is an extract from the FAQ for this newsgroup written by Diana Syriac, KC1SP:

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
Los Angeles 1-805-296-2407
Los Angles 1-213-462-0008

During the contest this weekend I came across two Ws who were not contesters but were discussing the contest. Says one "So what's this 59-04 people are sending?". The other replies, sounding very authoritative about it, "Oh, 5904 means you have made 5,904 QSOs [this was 2 hrs into the contest]. You get points for up to 100 contacts with the same country, then after that you get fewer points". "OK, thanks a lot" says the first one.

I can understand and forgive ignorance of the contest rules, but to tell someone this stuff in such a knowledgeable-sounding way is plain stupid. Or perhaps it's just amusing, depends how you are feeling at the time...

4225. MAJOR SOLAR FLARE ALERT #1 - X-CLASS EVENT - 27 OCTOBER

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-27 08:09:01 UTC
From: oler@hg.uleth.CA
Message-ID: <00950B82.3815E220.3716@hg.uleth.ca>
Source record: 292095

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 05:30 UT, 27 OCTOBER

/\

LOW TO NIL IMPACT EXPECTED
IMPACT ASSESSMENT SUPERSEDED BY PREVIOUS X1.6/2B EVENT

MAJOR ENERGETIC EVENT SUMMARY:

Flare Size: Class X1.9/2B
Location: S13E20 (Region 6891)
Tenflare: None Observed.
Times: Begin=0206 UT, Peak=0212 UT, End=0240 UT

Sweeps: No Type II or IV Sweeps Reported

NOTES: This major event was impulsive in nature and radio-quiet (no
tenflare or other significant radio bursts). However, a SWF was
observed briefly over many middle and low latitude sunlit stations.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

A terrestrial impact is not expected for this specific major flare.
However, the preceding major flare (the X1.6/2B event) is expected to
produce a terrestrial impact. As a result, the previous impact assessement
for the X1.6/2B event applies here. Consult that alert for more information.
More specific impact assessment data will be released later this UT day.

/\

4226. MAJOR SOLAR FLARE ALERT #2 - X-CLASS - 27 OCTOBER

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-27 08:35:59 UTC
From: oler@hg.uleth.CA
Message-ID: <00950B85.FC091FA0.3858@hg.uleth.ca>
Source record: 292096

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 07:45 UT, 27 OCTOBER

/\

MODERATE TO HIGH IMPACT EXPECTED
* PROTONS ARE EXPECTED BEFORE OR NEAR 16:00 UT *

MAJOR ENERGETIC EVENT SUMMARY:

Flare Size: Class X6.1/3B
Location: S13E15 (Region 6891)
Tenflare: 3,800 sfu at 0539 UT. Duration: In Progress
Times: Begin=0537 UT, Peak=0548 UT, End=0600 UT
(SESC end time is rated on a half-power point system)

Sweeps: Major Type II (Importance 3) at 0540 UT
Moderate Type IV (Importance 2) at 0545 UT

PRELIMINARY X-RAY TIME PROFILE DATA AND ESTIMATED STATISTICS:

BEGIN (XRAY) MAX (XRAY) END (XRAY) DURATION INTEG. FLUX SWF DUR.
------------ ----------- ----------- -------- ----------- --------
0537 (C6.2) 0548 (X6.1) 0712 (C9.8) 094 MIN. 0.803 J/m^2 091 min

WARNING: Protons are expected to arrive from this major energetic flare
sometime before or near 16:00 UT on 27 October. Greater than
10 MeV protons could peak near 200 pfu if this proton disturbance
materializes.

NOTES: Another minor precursor x-ray burst was observed with this event.
In all respects, this event is the largest flare yet spawned by
Region 6891. It was not as long in duration as yesterdays X1.6/2B
event, but it had a higher overall integrated flux and a harder
spectrum in x-rays and radio.

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

Region 6891 is proving to be an extremely prolific major energetic flare
producer thus far. This is the fifth major energetic flare it has produced
since rotating into view. Four of those flares have been X-class events.
Solar activity should continue high, and may approach very high levels today
should major flaring continue at this rapid rate.

This major class X6.1/3B tenflare may have a moderate to high
terrestrial impact late in the UT day of 28 October or early on 29 October.

Overall, a terrestrial impact of moderate to high proportions (ex. generating minor to major or possibly severe geomagnetic storming) is almost a certainty. Preliminary estimates suggest at least minor to major storming should materialize. Further major flaring could prolong or enhance these interplanetary disturbances. A more detailed impact assessement and geophysical forecast will be released later this UT day.

You probably mean the Argonaut. The original Argonaut was a very spartan radio with poor receiver overload characteristics and poor reliability. Street price for a used one hovers around $200. The current Agronaut II is really a Delta II with the power amplifier removed. With a street price around a kilobuck, it makes more sense to buy one of the other compact HF radios on the market such as the superb IC-735 and turn the power control down for QRP work.

>our interests.

Yes, that is the sad part, it's all we have. Others have tried to set up
rival organizations, but none have survived the League steamroller. I
view the League as primarily a publishing house, and a good one, a contest
promotion machine, and secondarily as a lobbying force for the status quo.
I'm a member, and I vote, write, and volunteer, but to little effect. The
League is a one party state and desparately needs competition to keep it
honest.

>It's too bad Wayne Greene brought up this dead issue again. Wayne Greene
>likes to do two things:

4229. Re: TS850S features and mod file (long)

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-27 11:02:47 UTC
From: ka3pgn@ka3ovk
Message-ID: <1991Oct27.110247.18517@ka3ovk>
Source record: 292094

I really appreciated your remarks about the 850. I've owned mine for
about four months now and one of the first things I did was to disable
the broadcast band attenuation.
Being an avid BCB DX'er, I found this little device quite an annoyance!
So, the first day out of the box, I did away with it and very easily at
that.

HERE ARE THE STEP BY STEP INSTRUCTIONS TO DISABLE THE BROADCAST BAND
ATTENUATION FOR THE KENWOOD TS-850S. This mod greatly improves the
sensitivity and likewise the reception on the AM broadcast band.
No noticable unwanted side effects have occured following this procedure.
I live within three miles of a 5,000 watt broadcast station on 1150 kc's
and am able to listen to stations on either side of that station. There
is some splatter but using the notch filter and the attenuation on the
front of the radio takes care of that for the most part. This is *NOT*
complicated and can be done in fifteen minutes. Only one caution here:
you WILL BE SOLDERING TWO POINTS ON A CIRCUIT BOARD THAT IS LOADED WITH
SURFACE MOUNTED COMPONENTS!!! There is little room to work on the board,
so be very careful with your iron! If you don't feel comfortable soldering,
get someone else to do it as you can cause a solder bridge and ruin your
radio without even trying. With that in mind, here goes:

1) remove the eleven screws that secure the bottom cover to the rig.
the six ones on the sides and the five on the bottom cover itself.
2) remove the bottom cover. there are no wires attached to the cover.
lift it right off. leave the top cover of the radio ON.
3) locate the RF BOARD. it's number is: X44-3120-00. this is the board
where you plug the optional filters into. with the open radio in front
of you, and the front of the radio facing you, the RF BOARD is the
one on the left. (there are only two boards under the bottom cover)
4) locate the chrome like shield on the rear of the RF BOARD. it's made
out of shiney steel. remove the four screws that hold this shield to
the board.
5) remove the shield by lifting the front of it up while sliding it
forwards, towards you. watch out for all the little wires and ribbon
cables going to and from the RF BOARD.
6) look at the rear of the board and towards the left corner.(the radio
is stil facing you upside down) notice two I/C's numbered IC1 and IC2.
directly behind the I/C's are a bank of adjustable coils in metal cans.
there are nine of these coils in a group. directly to the left of these
coils are many green and red inductors which are standing up. they look
like resistors but they're really small coils.
7) these inductors are part of the bandpass filtering for each of the bands
on the radio. the capacitors and resistors that complete the bandpass
filtering are on the other side of the board and are of the surface

mount type. you are only concerned with the bandpass filter for the
.5 to 1.6 band. notice the numbers for the inductors. find L8 and L9.
they are right at the edge of the board in the left rear corner
you will notice that .5 - 1.6 is stamped right next to L9.
BINGO! you have found the part of the circuit that you will modify.
8) look at where the .5 - 1.6 is stamped on the board next to L9. you
will see two bronze or gold solder points there directly next to the
numbers .5 - 1.6 . there is nothing soldered at those two points.
this is where you will solder a jumper wire between the bronze points.
do NOT confuse it with the other two solder points with the line
running in between them next to the phillips head screw!!! you want the
two points that are spaced very close together that is right next to
L9.
9) you will have to do the soldering on the OTHER SIDE OF THE BOARD.
remove the nine phillips head screws that hold the RF BOARD to the
chasis.
10) on the back of the radio, look for the switch stamped SW 1. it's right
below the grounding post and has the two postions: INT and EXT. remove
the two screws that hold the switch to the back of the rig. the switch
is soldered to the RF BOARD and you wont be able to lift the board up
until the screws are removed.
11) unplug enough cables from the board so you'll have enough room to lift
the RF BOARD up to solder the jumper. there is no need to remove the
board from the rig. slide it towards the front of the rig until the
switch SW 1 clears the back of the rig and lift the left side of the
board up and prop it up with a small block of wood.
12) locate the bronze solder points on the underside of the board.
there will be a small amount of solder at these two points on the
underside of the board.
13) bend a small jumper out of wire that fits the two bronze points on top
of the RF BOARD. you will place the jumper on the top and solder on the
underside of the board. with a pair of needle nosed pliers, place the
jumper into the holes and simply heat up the existing solder on the
underside until the jumper slips down farther into the holes.
you'll notice the large amount of components on the underside versus
the lack of components on the top of the board. be carefull when
heating the solder on the two points. you don'y want to disturb the
surface mounted parts or cause any excess solder to run onto them or
the foil nearby.
14) you are now done. re-assemble in reverse order, plugging the wires
back in carefully, making sure they don't get plugged into the wrong
place. also, avoid pinching them when replacing covers.

FRONT OF RADIO

Sorry, that's the best art work I can do. The purpose of the jumper is to bypass the two 150 ohm resistors that are in series after the bandpass filter. The resistors add between 20 and 25 db attenuation to the AM broadcast band. For some reason, Kenwood thinks that the receiver would become overloaded by strong nearby broadcasting stations, which would cause distortion. I simply don't find that to be the case. It's funny, Kenwood already had those two points there on the board, but without the jumper.....it seems to me that they had anticipated the need to bypass the attenuation in Europe or Asia. Thus, all export models going to the states were missing that jumper. Who knows? I can't find any other reason for the jumper points to be there.

Anyway, you'll notice an immediate increase of signal strength. You'll hear stations that you never knew were there! As I said, if you are bothered by strong stations in your area, try using the 6 and/or 12db attenuation buttons on the front of the rig.
I'll be glad to assist in any way possible. You can e-Mail me or feel free to call at the radio station. Have fun DX'ing!

Dave

This is no longer true. With the VOLMON program, the OO, under the direction of the OOC acting under the direction of the FCC, may gather evidence that will be used for prosecution. As OOC of Arizona, I have done this resulting in fines to 3 individuals (although the FCC verified the evidence in person, they do not have to, and in fact are encouraged by Washington to use well gathered OO evidence directly).

The VOLMON program is oriented towards conflict resolution - FCC prosecution is a last resort, after peer pressure (starting at the friendly level) has failed. In practice, with egregious violators, they are sometimes busted as a FIRST resort to set examples.

4235. contest qsl routing

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-27 19:30:57 UTC
From: eckman@eos1.larc.nasa.gov
Message-ID: <1991Oct27.193057.7612@news.larc.nasa.gov>
Source record: 292110

I had a lot of fun working my first CQ WW contest to basically chase some DX. I'd obviously like to qsl the new countries that I managed to work. However, in many instances, the stations appeared to be dxpeditions with special call letters. This seemed to be the case with many of those in the Caribbean. While some did mention qsl info if one listened long enough, the majority did not. Is there a newsletter of some kind that routinely lists qsl routing for this type of operation? I do see some routings in DX bulletins posted to the group. I assume that qsling these stations (e.g., J82A, CR2M) via the bureau would be futile. Any information would be appreciated.

4236. When Will Radios Have New Mw Frequencies?

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-27 20:09:03 UTC
From: schuster@cup.portal.com
Message-ID: <49309@cup.portal.com>
Source record: 292125
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

Even today, I see that most portable multi-band radios change from
the ferrite rod to the (poor for MW) telescopic whip at 1610 kHz.
If the MW band is soon going to be used up to 1710 kHz, why don't
the radio manufacturers change their firmware to reflect this?

This is the same sorry old myth that Wayne Green has been promoting
for years....except Wayne also blames the decline of US consumer
electronics on incentive licensing and the ARRL!

I "went through it" myself as a teenager, and upgrading was no big
deal. The reason incentive licensing was promoted at the time was
because a lot of hams were convinced that this was the solution
to a perceived lack of technical sophistication among their breteren,
and a way to counter the increasing number of so-called "appliance
operators." Until incentive licensing, the higher class licenses
were for vanity only....they had no additional privileges.

The changes in amateur radio since the 1960s probably have more
to do with cultural changes in society than with incentive licensing.
In the late 60s, it was hard to get my teen friends interested in
a hobby that allowed them to communicate with a bunch of old farts
grousing about the ARRL. Believe it or not, incentive licensing
was not the thing that was unattractive about the hobby.

I can't believe that 25 years later these grouchy old men are STILL
beating this dead horse!

The bands were carved up into "ghettos" ??? Gimme a break!

4238. Middle Latitude Auroral Activity Warning - High Risk

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-27 23:30:17 UTC
From: oler@hg.uleth.CA
Message-ID: <00950C02.EA6F0520.4617@hg.uleth.ca>
Source record: 292113

/\

MIDDLE LATITUDE AURORAL ACTIVITY WARNING

ISSUED: 21:00 UT, 27 OCTOBER

/\

HIGH RISK PERIOD: 28 - 29 October
MODERATE RISK PERIOD: 28 - 30 October

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: HIGH

POTENTIAL EQUATORWARD POSITION OF AURORAL OVAL: >47 North Latitude

POTENTIAL LUNAR INTERFERENCE: MODERATE - LOW

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: GOOD

ESTIMATED NORTH AMERICAN OBSERVATION BOUNDARIES (PRIOR TO MOONRISE):
HIGH LEVELS OF ACTIVITY MAY BE OBSERVED FROM WASHINGTON STATE TO CENTRAL IDAHO TO SOUTHERN MONTANA TO SOUTH DAKOTA TO CENTRAL MINNESOTA TO CENTRAL WISCONSIN TO MICHIGAN TO CENTRAL NEW YORK STATE THROUGH TO SOUTHERN MAINE.

MODERATE LEVELS OF ACTIVITY MAY BE OBSERVED FROM SOUTHERN OREGON TO NORTHERN UTAH TO NEBRASKA TO NORTHERN MISSOURI TO CENTRAL ILLINOIS TO CENTRAL OHIO TO SOUTHERN PENNSYLVANIA TO NEW JERSEY.

NOTES:

Two of the last three major solar flares are expected to have a potential impact on auroral activity late in the UT day of 28 October or early in the UT day of 29 October. If the disturbance(s) arrive as predicted, North America and southern Australia/New Zealand should witness the most energetic phase of the auroral storming, with Australian and New Zealand regions being favored most.

Auroral observations will be most favorable before the moon rises in the evening hours. After moonrise, lunar luminosity will drown out significant auroral detail and will effectively limit the southern visible latitudinal boundary of activity. Note that these predictions are estimates only. Auroral storm dynamics change rapidly with respect to both time and position. The boundary lines stated above should serve as a guide only to the possible observable limits of auroral activity. Activity could become more, or less intense than indicated.

This disturbance is expected to last approximately 24 to 48 hours after its onset, barring further major solar flares. Further major flaring is

anticipated over the next 24 to 72 hours. Potential terrestrial impacts will remain high as the solar region responsible crosses the central solar meridian over the next 24 hours.

** End of Warning **

4239. Low Latitude Auroral Activity Watch

Newsgroup: rec.radio.amateur.misc
Date: 1991-10-27 23:54:20 UTC
From: oler@hg.uleth.CA
Message-ID: <00950C06.466EEEA0.4758@hg.uleth.ca>
Source record: 292114

/\

LOW LATITUDE AURORAL ACTIVITY WATCH

ISSUED: 22:00 UT, 27 OCTOBER

/\

MODERATE RISK PERIOD: 28 - 30 October

POTENTIAL MAGNITUDE OF LOW LATITUDE AURORAL ACTIVITY: LOW - MODERATE

POTENTIAL EQUATORWARD POSITION OF AURORAL OVAL: >47 North Latitude

POTENTIAL LUNAR INTERFERENCE: MODERATE - LOW

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM LOW LATITUDES: FAIR

ESTIMATED NORTH AMERICAN OBSERVATION BOUNDARIES (PRIOR TO MOONRISE):
THERE IS A SLIGHT CHANCE LOW TO MODERATE LEVELS OF ACTIVITY MAY BE
OBSERVED SOUTH OF A LINE FROM SOUTHERN OREGON TO NORTHERN UTAH TO
NEBRASKA TO NORTHERN MISSOURI TO CENTRAL ILLINOIS TO CENTRAL OHIO TO
SOUTHERN PENNSYLVANIA TO NEW JERSEY.

The risk for potential observations of auroral activity over the low latitude
regions is sufficient to warrant this watch. Consult the Middle Latitude
Auroral Activity Warning for additional details.

Barring further major flares, this event should end near or after 30 October.
This watch will remain in effect until that time, unless conditions warrant
upgrading or cancelling the watch.

** End of Watch **

I wonder what would happen if someone was sufficiently foolish
enough to give Wayne access to the net. Would it quickly deteriorate to
rec.radio.amateur.wayne? :-) :-) :-)

(I hope nobody takes the above seriously. The bandwidth I imagine
that would spew forth could sink the entire net.)

I have one too (well, it's a W2E, being in Europe :-), and it does work well, but I miss some things that were there in my IC-2E. As far as I found, other similar rigs are lacking features such as:

1. Very rigid casing. The W2E is plasic, and it breaks when you drop it. I don't have experience yet, but it looks as if the battary case will break and not the rig. Who 'tried' this?
2. I would like to be able to block one band when transmitting on another. Some signals come trough and I have to shut down the 'other' half before I transmit.
3. A battary indicator would have been nice. The radio now dies suddenly. (and if it does, I sometimes am unable to switch it off; that's a CPU function too!)
4. In priority mode, the power saver doesn't work. (go figure what happens; receiver draws 50-70mA when 'on').
5. General-purpose DTMF decoder. The hardware is in..
6. A decent amout of audio. The audio is too small when bicycling in town.
7. I have seen other rigs where one could switch battary pack without removing the leather protecting case
8. The display should be IN the rig instead of sticking out a bit. It's the first thing that scratches, and the most obvious to see..
9. Better RF filtering on the input. I don't use it as a scanner; I would have bought the one with wide-band receiver if I did.

ICOM: I don't mind if my 2-band is a bit bigger, as longs as it produces lots of audio (bigger speaker!), survives an occasional drop (it's a hand-held, you know..), and tells you when it expects to die of starvation.

Overall, I do like the radio, and would buy it again, but it's not perfect..

>
>Gary KE4ZV

Regarding the 735, with the power control set to minimum you'll still be running around 7 watts of RF (definitely QRO in CW terms), so a mod is required to actually run QRP (application of a negative DC voltage to the ALC socket on the rear achieves this).

I would add, however, that to sense the real 'joy of QRP' you ought to consider a little home-brewing in addition to buying the 'box'; making QSOs a few tens of miles away with a couple of transistors and a crystal is something that can give real satisfaction, to a degree you will never get with something like a 735. Just my opinion, of course.......

Whilst on the QRP subject, I read yesterday in the G-QRP Club journal that it has been internationally accepted for QRPers to use '72' at the end of a QSO meaning 'happy QRPing', in addition to the 73, 55, 88 and anything else you care to use normally. Hot news indeed.

I am with John. Wayne is the reason I quit subsribing to 73. I couldn't take the "too many" pages of the tirade, which left "too few" pages for real HAM radio stuff.

As for the ARRL, I believe that we are listened to. When I spoke with Marshall Quiatt, the Rocky Mountain Director, I got the feeling that he was concerned about the hobby. I wrote a letter to him before the League supported the "no-code" issue, which I beleive was read and acted on. I think I will stay in the league for the future (just renewed).
